

FEATURES:

- **Organized as 64K x8 / 128K x8 / 256K x8**
- **4.5-5.5V Read Operation**
- **Superior Reliability**
 - Endurance: At least 1000 Cycles
 - Greater than 100 years Data Retention
- **Low Power Consumption**
 - Active Current: 20 mA (typical)
 - Standby Current: 10 μ A (typical)
- **Fast Read Access Time**
 - 70 ns
- **Fast Byte-Program Operation**
 - Byte-Program Time: 20 μ s (typical)
 - Chip Program Time:
 - 1.4 seconds (typical) for GLS27SF512
 - 2.8 seconds (typical) for GLS27SF010
 - 5.6 seconds (typical) for GLS27SF020
- **Electrical Erase Using Programmer**
 - Does not require UV source
 - Chip-Erase Time: 100 ms (typical)
- **TTL I/O Compatibility**
- **JEDEC Standard Byte-wide EPROM Pinouts**
- **Packages Available**
 - 32-lead PLCC
 - 32-lead TSOP (8mm x 14mm)
 - 32-pin PDIP for GLS27SF010/020
- **All non-Pb (lead-free) devices are RoHS compliant**

PRODUCT DESCRIPTION

The GLS27SF512/010/020 are a 64K x8 / 128K x8 / 256K x8 CMOS, Many-Time Programmable (MTP) low cost flash, manufactured with high performance SuperFlash technology. The split-gate cell design and thick oxide tunneling injector attain better reliability and manufacturability compared with alternate approaches. These MTP devices can be electrically erased and programmed at least 1000 times using an external programmer with a 12V power supply. They have to be erased prior to programming. These devices conform to JEDEC standard pinouts for byte-wide memories.

Featuring high-performance Byte-Program, the GLS27SF512/010/020 provide a Byte-Program time of 20 μ s. Designed, manufactured, and tested for a wide spectrum of applications, these devices are offered with an endurance of at least 1000 cycles. Data retention is rated at greater than 100 years.

The GLS27SF512/010/020 are suited for applications that require infrequent writes and low power nonvolatile storage. These devices will improve flexibility, efficiency, and performance while matching the low cost in nonvolatile applications that currently use UV-EPROMs, OTPs, and mask ROMs.

To meet surface mount and conventional through hole requirements, the GLS27SF512 are offered in 32-lead PLCC, 32-lead TSOP, and 28-pin PDIP packages. The GLS27SF010/020 are offered in 32-pin PDIP, 32-lead PLCC, and 32-lead TSOP packages. See Figures 3, 4, and 5 for pin assignments.

Device Operation

The GLS27SF512/010/020 are a low cost flash solution that can be used to replace existing UV-EPROM, OTP, and mask ROM sockets. These devices are functionally (read and program) and pin compatible with industry standard EPROM products. In addition to EPROM functionality, these devices also support electrical Erase operation via an external programmer. They do not require a UV source to erase, and therefore the packages do not have a window.

Read

The Read operation of the GLS27SF512/010/020 is controlled by CE# and OE#. Both CE# and OE# have to be low for the system to obtain data from the outputs. Once the address is stable, the address access time is equal to the delay from CE# to output (T_{CE}). Data is available at the output after a delay of T_{OE} from the falling edge of OE#, assuming that CE# pin has been low and the addresses

Data Sheet

have been stable for at least $T_{CE}-T_{OE}$. When the CE# pin is high, the chip is deselected and a typical standby current of 10 μ A is consumed. OE# is the output control and is used to gate data from the output pins. The data bus is in high impedance state when either CE# or OE# is high.

Byte-Program Operation

The GLS27SF512/010/020 are programmed by using an external programmer. The programming mode for GLS27SF010/020 is activated by asserting 11.4-12V on V_{PP} pin, V_{DD} = 4.5-5.5V, V_{IL} on CE# pin, and V_{IH} on OE# pin. The programming mode for GLS27SF512 is activated by asserting 11.4-12V on OE#/V_{PP} pin, V_{DD} = 4.5-5.5V, and V_{IL} on CE# pin. These devices are programmed byte-by-byte with the desired data at the desired address using a single pulse (CE# pin low for GLS27SF512 and PGM# pin low for GLS27SF010/020) of 20 μ s. Using the MTP programming algorithm, the Byte-Programming process continues byte-by-byte until the entire chip has been programmed.

Chip-Erase Operation

The only way to change a data from a “0” to “1” is by electrical erase that changes every bit in the device to “1”. Unlike traditional EPROMs, which use UV light to do the Chip-Erase, the GLS27SF512/010/020 uses an electrical Chip-Erase operation. This saves a significant amount of time (about 30 minutes for each Erase operation). The entire chip can be erased in a single pulse of 100 ms (CE# pin low for GLS27SF512 and PGM# pin for GLS27SF010/020). In order to activate the Erase mode for GLS27SF010/020, the 11.4-12V is applied to V_{PP} and A₉ pins, V_{DD} = 4.5-5.5V, V_{IL} on CE# pin, and V_{IH} on OE# pin. In order to activate Erase mode for GLS27SF512, the 11.4-12V is applied to OE#/V_{PP} and A₉ pins, V_{DD} = 4.5-5.5V, and V_{IL} on CE# pin. All other address and data pins are “don’t care”. The falling edge of CE# (PGM# for GLS27SF010/020) will start the Chip-Erase operation. Once the chip has been erased, all bytes must be verified for FFH. Refer to Figures 13 and 14 for the flowcharts.

Product Identification Mode

The Product Identification mode identifies the devices as the GLS27SF512, GLS27SF010 and GLS27SF020 and manufacturer as Greenliant. This mode may be accessed by the hardware method. To activate this mode for GLS27SF010/020, the programming equipment must force V_H (11.4-12V) on address A₉ with V_{PP} pin at V_{DD} (4.5-5.5V) or V_{SS}. To activate this mode for GLS27SF512, the programming equipment must force V_H (11.4-12V) on address A₉ with OE#/V_{PP} pin at V_{IL}. Two identifier bytes may then be sequenced from the device outputs by toggling address line A₀. For details, see Tables 3 and 4 for hardware operation.

T4.2 1152

1. X can be V_{IL} or V_{IH}, but no other value.

2. Device ID = A5H for GLS27SF010 and A6H for GLS27SF020

3. A_{MS} = Most significant address

A_{MS} = A₁₆ for GLS27SF010 and A₁₇ for GLS27SF020

Note: V_{PPH} = 11.4-12V, V_H = 11.4-12V

Absolute Maximum Stress Ratings (Applied conditions greater than those listed under “Absolute Maximum Stress Ratings” may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these conditions or conditions greater than those defined in the operational sections of this data sheet is not implied. Exposure to absolute maximum stress rating conditions may affect device reliability.)

Temperature Under Bias -55°C to +125°C
Storage Temperature -65°C to +150°C
D. C. Voltage on Any Pin to Ground Potential -0.5V to $V_{DD}+0.5V$
Transient Voltage (<20 ns) on Any Pin to Ground Potential -2.0V to $V_{DD}+2.0V$
Voltage on A_9 and V_{PP} Pin to Ground Potential -0.5V to 14.0V
Package Power Dissipation Capability ($T_A = 25^\circ C$) 1.0W
Through Hole Lead Soldering Temperature (10 Seconds) 300°C
Surface Mount Solder Reflow Temperature¹ 260°C for 10 seconds
Output Short Circuit Current² 100 mA

1. Excluding certain with-Pb 32-PLCC units, all packages are 260°C capable in both non-Pb and with-Pb solder versions.
Certain with-Pb 32-PLCC package types are capable of 240°C for 10 seconds; please consult the factory for the latest information.
2. Outputs shorted for no more than one second. No more than one output shorted at a time.

TABLE 14: Revision History

Number	Description	Date
02	• 2002 Data Book	Feb 2002
03	• Document Control Release (SST Internal): No technical changes	Apr 2002
04	• Corrected I_H Supervoltage Current for A_9 from 100 μA to 200 μA in Tables 5, 6, and 7	Jul 2002
05	• Corrected the Test Conditions for I_{DD} and I_{PPR} in Table 5 on page 7	Sep 2003
06	• Corrected the Max value for I_{PP} from 1 mA to 3 mA (See Tables 6 and 7) • Added MPNs for non-PB packages (See page 19)	Nov 2003
07	• 2004 Data Book • Corrected caption for Figure 7 from “Read Cycle” to “Chip-Erase”	Nov 2003
08	• Removed 256 Kbit parts - refer to EOL Product Data Sheet S71152(02)	Apr 2004
09	• Removed all 90 ns parts - refer to EOL Product Data Sheet S71152(03) • Added RoHS compliance information on page 1 and in the “Product Ordering Information” on page 19 • Added the solder reflow temperature to the “Absolute Maximum Stress Ratings” on page 7.	Mar 2005
10	• Removed obsolete Latch-up parameter from Table 10 on page 8	May 2005
11	• Corrected V_{PP} voltage from 11.4-12.6V to 11.4-12V	Sep 2005
12	• Removed leaded parts. See S71152(04) • End-of-Life PG package and PG valid combination. See S71152(04)	Sep 2008
13	• Transferred from SST to Greenliant	May 2010
