

Commercial CCRT-33

Internal Terminations DC-18GHz SPDT Switch

Failsafe

The CCRT-33 Switch is an internally terminated, broadband, SPDT, electromechanical coaxial switch designed to switch a microwave signal from a common input to either of two outputs. The characteristic impedance is 50 Ohms. Internal terminations provide an impedance match for the unselected port. The switches are small with the minimum spacing that is compatible with SMA connectors.

The CCRT-33 is available with either a failsafe or latching actuator.
