LDG-A

Types

LDG-A-12 . . . max. 12 connections
 LDG-A-14 . . . max. 14 connections
 LDG-A-16 . . . max. 16 connections
 LDG-A-30 . . . max. 30 connections
 LDG-A-46 . . . max. 46 connections
 LDG-A-70 . . . max. 70 connections

General

The LDG-A series of enclosures are fully insulated enclosures according to the specifications of the machinery and automotive industries, with terminals protected against accidental contact in accordance with VDE 0100 Part 570, VDE 0160 Part 100 and VBG 4.

Designed for easy installation, these housings facilitate extremely rational equipment assembly with optimal utilization of space.

- Wave-solderable termination of the terminal blocks eliminates the need for hard (discrete) wiring and is cost-effective for higher volumes
- Pluggable termination via frame inserts for commercially available connectors
- Snap-together design speeds up assembly and eliminates the need for mechanical fasteners (no screws or bolts)
- Custom-loaded terminal blocks via blind plugs to meet nearly any virtually application's configuration and to reduce costs
- Custom cut-outs for e. g. switches and special signaling devices in covers and in blind inserts for special connector solutions
- Aluminium front cap for all versions available
- Base part versions with ventilation slots for effective heat dissipation; all versions except LDG-A 14
- EMC compliant enclosure solutions achieved by inner shielding of base part and Al front cap
- Simple and safe operation achieved by recessed cap tive, self-locking, vibration resistant terminal screws, which prevent accidental contact.
- Complete assembly of the electronic module before being installed into the enclosure
- Compact, attractive design by means of structured surface and of space saving envelope, which makes it ideal for both DIN rail mounting or on any flat surface via screw or bolt with the integrated mounting feed
- Easy assembly and disassembly for servicing

Enclosure LDG-A

The base for all applications

Fully-insulated enclosures in accordance with machinery and automotive industry standards, with shockproof terminals acc. to VDE 0100 and VBG 4.
Base part optionally with or without ventilation slots.
Enclosure surface with erosion-structure in attractive design.
Easy assembly and disassembly for servicing.

Easy connecting technique

From the connection cable via the terminal block to the PC board, the connection could not be more simple.

Generously dimensioned stacking compartment

Printed circuit boards can be stacked one above the other such that complex assemblies can be implemented in compact dimensions.

Fast component-mounting and manufacturing times

The PC board, with the mounted components and terminal blocks will be wave-soldered, in one work process and then completely assembled into the base part in one step.

Just snap them on

LDG-A enclosures have a snap-on clip for easy snap-on assembly for standard DIN rails acc. to DIN 46277 and DIN EN 50022.

EMC compliant enclosure solutions

Fully shielded enclosure achieved by metallized base part and Al front cap

The metallized inner side of the base part secures high EMI/RFI protection and ESD protection.

Pluggable terminals and blind inserts for LDG-A

Easy service and device exchange

Frame inserts with cut-out for commercially available pluggable terminal connectors

Features:

- Used as assembly and guide element for the PC board with guides for transverse board and longitudinal board offset by 90°.
- Compact design for secure snap-on and safe fixing on the base part.
- Screw-on option for the cover.

Frame insert with top cutout for separate pin header. For maximum component space on the longitudinal board.

Connection of commercially available screw-plug connectors.

Blind plug	black	054249
LDG-A-70		
Blind insert	black	054730

Frame insert with top cutout for separate pin header. You will have the maximum component space on the PC board.

Frame insert with bottom cutout allows the assembly of a transverse board.

The **blind insert** provides for the full covering of the base part. Individual customized cutouts achieved by mechanical machining or special tool inserts are easy to be realized.

Technical data

Material of plastic parts:	PC UL 94 V-0
Color:	black special colors upon request
Temperature range:	-40°C up to +110°C

Flexibility for customized solutions

Various colors, e. g. company color for base part, cover or terminal block possible

Cover in grey, black or transparent for display functions

Customized cutouts and holes in covers and blind inserts

Enclosure versions with ventilation slots

Effective heat dissipation for electronic subassemblies with increased heating

Base part with ventilation slots

- available for enclosure versions LDG-A-12, LDG-A-16, LDG-A-30, LDG-A-46, LDG-A-70
- slot dimension: 42 x 3 mm
- additional data upon request

Enclosure LDG-A 12

with max. 12 terminals

The LDG-A-12 enclosure is capable of accommodating one lengthwise board and one crosswise circuit board. For the termination of the discrete wires 2 terminal blocks with max. 6 terminals each will be used. The outline of the terminal block is according to the base part.

The two asymmetrical terminal block housings that can be screwed to the circuit board are each capable of accommodating up to six terminal pins and terminal clamps. Custom-loading of the terminal blocks is optionally possible. Not used terminal cavities will not be loaded and will be closed shockproof with blind plugs.

The LDG-A 12 is provided with a snap-on clip for easy assembly on DIN rails acc. to DIN 46 277 and EN 50 022. Base part available with ventilation slots for effective heat dissipation. Base part available with metallized inner side for EMC compliant enclosure solutions.

Enclosure LDG-A 14

with max. 14 terminals

The LDG-A-14 enclosure is capable of accommodating one lengthwise board and one crosswise circuit board. For the termination of the discrete wires 2 terminal blocks with max. 7 terminals each will be used. The outline of the terminal block is according to the base part.

The two asymmetrical terminal block housings that can be screwed to the circuit board are each capable of accommodating up to six terminal pins and terminal clamps. Custom-loading of the terminal blocks is optionally possible. Not used terminal cavities will not be loaded and will be closed shockproof with blind plugs.

Fixation via 2 holes acc. to DIN 46 121 and DIN 43 660 or quick snap-on assembly on DIN rails acc. to DIN 46 277 and EN 50 022.

Base part available with metallized inner side for EMC compliant enclosure solutions.

Cover version as Aluminium (Al) cap

Customized front mating connector solutions and EMC compliant applications

Al cap:

- Cover for base part, available for all LDG-A types
- 2 threaded holes M 2,5 for fixing on the base, and 4 holes for PCB fixing upon request
- Assembly and guiding element for PCB and I/O connector
- Various wiring options
- Customized cutouts via machining or tool inserts, easy to be realized
- Material: Aluminium AlMg 1 F18, wall thickness 1,5 mm
- Color: eloxadized nature E6/EV1 (special colors upon request)

Application examples with Al cap

Al cover for base part.

THE ERNI COMMITMENT – BEYOND CUSTOMER SATISFACTION

ERNI Manufactures a Wide Range of World-Class Quality Interconnect Products

DIN 41612/IEC 60603-2 Connectors

Wide Range of Standard and Inverse Pressfit and Solder DIN Connectors
High Density 4 and 5 Row Connectors
Right-Angle Pressfit Connectors
Type M Hybrid Connectors for Signal, Power and Coax
Female Crimp Connectors
IDC Receptacle Connectors
Cable Housings (covers)
Eurocard Center Connectors

2.54 mm IDC Connector System

ERmet® 2mm Hard Metric Connectors

2 mm Hard Metric Connectors

ERmet® 7 and 10 Row Connectors
ERmet® Connectors for cPCI and VME-64x Applications
Verticale Female Connectors
Shielded and Unshielded Connectors
Shrouds
AB Connectors and Shrouds
Monoblock Connectors

D SUB Pressfit Connectors

SMC .050" (1.27 mm) SMT Connector System

D-Subminiature Connectors

Pressfit Connectors
Filtered Connectors
Right-Angle Pressfit Connectors
High Power Connectors
IDC Connectors

LDG-A Miniature Enclosures

Wide range of DIN 41612 / IEC 60603-2 Connectors

Cable Housings

Other Connectors

SMC .050 (1.27mm) Board to Board and Board-to-Wire Connectors
ERbic® Bus Interface Connectors
Pressfit Power Tap Connectors for Backplanes
Shrouded Headers (.100")
Coaxial Cable PCB Connectors
2.54 mm IDC Connector System

Cable Housings

ERbic® Bus Interface Connector System

Miniature Enclosures

LDG-A DIN-Rail Enclosures
IDG-B DIN-Rail Enclosures

**ERNI also carries presses and tooling to support
your interconnect applications.**
