

## **TPS61251 Evaluation Module**

This user's guide describes the characteristics, operation, and use of the TPS61251 evaluation module (EVM). This EVM contains the Texas Instruments 3.25 MHz, up to 6.5 V, step-up DC-DC converter TPS61251 with an adjustable input current limit. The user's guide includes EVM specifications, recommended test setup, the schematic diagram, bill of materials, the board layout, and test data.

### **CAUTION**

Please be aware that the input current is limited to 500 mA on this EVM. For maximum output current operation remove R3 and connect ILIM to VIN.

## 1 Introduction

The TPS61251 device provides a power supply solution for products powered by either a three-cell alkaline, NiCd or NiMH battery, or a one-cell Li-Ion or Li-polymer battery. The wide input voltage range is ideal to power portable applications like mobile phones or computer peripherals. The device has a resistor programmable (RILIM) average input current limit and is suitable for a wide variety of applications.

### 1.1 Requirements

The TPS61251 EVM is designed to operate over the full input voltage range and produces an output voltage of 5.5 V. The output voltage can be adjusted by changing the feedback resistor divider network.

In order to operate this EVM, only a DC power supply capable of delivering between 2.3 V and 6.0 V at up to 500 mA is necessary.

### 1.2 Applications

- USB Host Supplies from a Single Li-Ion Battery
- Current Limited Applications
- Li-Ion Applications
- Audio Applications
- RF-PA Buffers

### 1.3 Features

- Resistor Programmable Input Current Limit
  - $\pm 20\%$  Current Accuracy at 500 mA Over Full Temperature Range
  - Programmable from 100 mA up to 1500 mA
- Up to 92% Efficiency
- $V_{IN}$  Range from 2.3 V to 6.0 V
- Power Good Indicates the Appropriate Output Voltage Level
- Adjustable Output Voltage up to 6.5 V
- 100% Duty-Cycle Mode When  $V_{IN} > V_{OUT}$
- Load Disconnect and Reverse Current Protection
- Double-sided, two-active-layer PCB with all components on top side
- Active converter area of approximately 60 mm<sup>2</sup>

## 2 TPS61251 EVM Electrical Performance Specifications

**Table 1. TPS61251 EVM Electrical and Performance Specifications**

Parameter	Symbol	Notes and Conditions	Min	Typ	Max	Unit
<b>Input Characteristics</b>						
Input Voltage	$V_{IN}$		2.3		6.0	V
Average Input Current	$I_{IN}$		400	500	600	mA
No Load Input Current				1		mA
Input UVLO	$V_{IN\_UVLO}$	Falling		2.0	2.1	V
<b>Output Characteristics</b>						
Output Voltage	$V_{OUT}$	$V_{IN} = 3.6$ V, $I_{OUT} = 300$ mA	5.4	5.5	5.6	V
Line Regulation		$V_{IN} = 2.3$ V to 6.0 V		0.5%		
Load Regulation		$I_{OUT} = 0$ mA to 300 mA		0.5%		
Output Voltage Ripple	$V_{OUT\_Ripple}$	$V_{IN} = 3.6$ V, $I_{OUT} = 300$ mA			50	mVpp
Output Current	$I_{OUT}$	$V_{IN} = 3.6$ V			300	mA
<b>Systems Characteristics</b>						
Switching Frequency	$f$			3.25		MHz
Peak Efficiency	$\eta_{PK}$	$V_{IN} = 3.6$ V		92%		
Full Load Efficiency	$\eta$	$V_{IN} = 3.6$ V, $I_{OUT} = 300$ mA		90%		

## 3 TPS61251 EVM Schematic

NOTE: For Reference Only, See [Table 2](#)

**Figure 1. TPS61251 EVM Schematic**

## 4 Connector and Test Point Descriptions

### 4.1 Input Connectors

#### 4.1.1 J1 – VIN

This header is the positive connection to the input power supply. The power supply must be connected between these pins and J3 (GND). Twist the leads to the input supply and keep them as short as possible. The input voltage has to be between 2.3 V and 6.0 V.

#### 4.1.2 J2 – Input Sense Connector

This header is intended to measure the input voltage directly on the input capacitor. Therefore, a 4-wire power and sense supply can be connected. Twist the leads to the sensing connector.

#### 4.1.3 J3 – GND

This header is the return connection to the input power supply. Connect the power supply between these pins and J1 (VIN). Twist the leads to the input supply and keep them as short as possible. The input voltage must be between 2.3 V and 6.0 V.

### 4.2 Output Connectors

#### 4.2.1 J4 – VOUT

This header is the positive connection of the output voltage. Connect the load between these pins and J6 (GND).

#### 4.2.2 J5 – Output Sense Connector

This header is intended to measure the output voltage directly on the output capacitors.

#### 4.2.3 J6 – GND

This header is the return connection of the output voltage. Connect the load between these pins and J4 (VOUT).

### 4.3 Other Connectors

#### 4.3.1 J7 – Power Good Connector

The Power Good Output (PG) of the IC is an open-drain output and there is a  $1\text{ M}\Omega$  resistor connected between PG and VOUT. Pin 1 of this connector is connected to PG and Pin2 is connected to GND.

### 4.4 Jumpers

#### 4.4.1 JP1 – Enable Jumper

Placing a jumper across pins EN and ON ties the EN pin to VIN, thereby enabling the device. Placing a jumper across pins EN and OFF ties the EN pin to GND, which disables the device.

## 5 TPS61251 EVM Test Data

Figure 5 through Figure 11 present typical performance curves for the TPS61251 EVM. Since actual performance data can be affected by measurement techniques and environmental variables, these curves are presented for reference and may differ from actual field measurements.

### 5.1 Efficiency

**Figure 2. TPS61251 EVM Efficiency vs Load Current**

### 5.2 Load and Line Regulation

**Figure 3. TPS61251 EVM Load Transient Response, Snooze Mode to PFM Mode**

**Figure 4. TPS61251 EVM Load Transient Response, PFM Mode**

Figure 5. TPS61251 EVM Load Transient Response, PFM Mode to CCM Mode

Figure 6. TPS61251 EVM Load Transient Response, CCM Mode

Figure 7. TPS61251 EVM Line Transient Response

### 5.3 Output Voltage Ripple

Figure 8. TPS61251 EVM Output Voltage Ripple in Snooze Mode

Figure 9. TPS61251 EVM Output Voltage Ripple in PFM Mode

**Figure 10. TPS61251 EVM Output Voltage Ripple at 150mA**

The current variation on the inductor current is caused by mode changes inside the IC. The IC must ensure accurate output voltage regulation; with very low ESR the regulation loop can switch to a pure comparator regulation scheme. During this operation the output voltage is regulated between two thresholds. The upper threshold is defined by the programmed output voltage and the lower value is about 10 mV lower. If the upper threshold is reached, the off-time is increased to reduce the current in the inductor. Therefore, the output voltage drops slightly until the lower threshold is tripped. Now the off-time is reduced to increase the current in the inductor for charging up the output voltage to the steady-state value. The current swing during this operation mode strongly depends on the current drawn by the load; but, does not exceed the programmed current limit. The output voltage during comparator operation stays within the specified accuracy with minimum voltage ripple.

**Figure 11. TPS61251 EVM Output Voltage Ripple at Full Load**

## 5.4 Startup

Figure 12. TPS61251 Startup With no Load

Figure 13. TPS61251 Startup With Full Load

## 6 TPS61251 EVM Assembly Drawings and Layout

Figure 14 through Figure 16 show the design of the TPS61251 EVM printed circuit board. The EVM uses a 2-Layer, 1-oz copper-clad circuit board 61 mm x 51 mm with all components in a 7 mm x 11 mm active area on the top side. All active top and bottom layer traces allow easy viewing and probing for evaluating the TPS61251 control IC in a practical double-sided application. Moving components to both sides of the PCB, or using additional internal layers, can offer additional size reduction for space-constrained systems.

**Figure 14. TPS61251 EVM Component Placement (Viewed from Top)**

**Figure 15. TPS61251 EVM Top Copper (Viewed from Top)**

## 7 List of Materials

Table 2 lists the EVM components as configured according to the schematic shown in Figure 1.

Table 2. HPA517A Bill of Material

Count	RefDes	Value	Description	Size	Part Number	MFR
2	C1, C3	4.7 $\mu$ F	Capacitor, Ceramic, 10V, X7R, 10%	0805	GRM21BR71A475KA73	Murata
0	C10	open	Capacitor, Aluminum	6032 (C)	Std	Sanyo
1	C2	1nF	Capacitor, Ceramic, 50V, X7R, 10%	0603	Std	Std
6	C4, C5, C6, C7, C8, C9	470 $\mu$ F	Capacitor, Polymer SMT, 6.3V, -25 to +105°C, $\pm 20\%$	7343(D)	T520W477M006ATE055	Kemet
1	L1	1.5 $\mu$ H	Inductor, SMT, 2.2A, 72m $\Omega$	0.118 X 0.118 inch	XFL3012-152ME	Coilcraft
2	R1, R4	1.00M	Resistor, Chip, 1/16W, 1%	0603	Std	Std
1	R2	280k	Resistor, Chip, 1/16W, 1%	0603	Std	Std
1	R3	20.0k	Resistor, Chip, 1/16W, 1%	0603	Std	Std
1	U1	TPS61251DSG	IC, High Frequency Step-Up Converter, Fixed V <sub>o</sub>	QFN	TPS61251DSG	TI

## Evaluation Board/Kit Important Notice

Texas Instruments (TI) provides the enclosed product(s) under the following conditions:

This evaluation board/kit is intended for use for **ENGINEERING DEVELOPMENT, DEMONSTRATION, OR EVALUATION PURPOSES ONLY** and is not considered by TI to be a finished end-product fit for general consumer use. Persons handling the product(s) must have electronics training and observe good engineering practice standards. As such, the goods being provided are not intended to be complete in terms of required design-, marketing-, and/or manufacturing-related protective considerations, including product safety and environmental measures typically found in end products that incorporate such semiconductor components or circuit boards. This evaluation board/kit does not fall within the scope of the European Union directives regarding electromagnetic compatibility, restricted substances (RoHS), recycling (WEEE), FCC, CE or UL, and therefore may not meet the technical requirements of these directives or other related directives.

Should this evaluation board/kit not meet the specifications indicated in the User's Guide, the board/kit may be returned within 30 days from the date of delivery for a full refund. **THE FOREGOING WARRANTY IS THE EXCLUSIVE WARRANTY MADE BY SELLER TO BUYER AND IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED, IMPLIED, OR STATUTORY, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE.**

The user assumes all responsibility and liability for proper and safe handling of the goods. Further, the user indemnifies TI from all claims arising from the handling or use of the goods. Due to the open construction of the product, it is the user's responsibility to take any and all appropriate precautions with regard to electrostatic discharge.

**EXCEPT TO THE EXTENT OF THE INDEMNITY SET FORTH ABOVE, NEITHER PARTY SHALL BE LIABLE TO THE OTHER FOR ANY INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES.**

TI currently deals with a variety of customers for products, and therefore our arrangement with the user **is not exclusive**.

TI assumes **no liability for applications assistance, customer product design, software performance, or infringement of patents or services described herein**.

Please read the User's Guide and, specifically, the Warnings and Restrictions notice in the User's Guide prior to handling the product. This notice contains important safety information about temperatures and voltages. For additional information on TI's environmental and/or safety programs, please contact the TI application engineer or visit [www.ti.com/esh](http://www.ti.com/esh).

No license is granted under any patent right or other intellectual property right of TI covering or relating to any machine, process, or combination in which such TI products or services might be or are used.

## FCC Warning

This evaluation board/kit is intended for use for **ENGINEERING DEVELOPMENT, DEMONSTRATION, OR EVALUATION PURPOSES ONLY** and is not considered by TI to be a finished end-product fit for general consumer use. It generates, uses, and can radiate radio frequency energy and has not been tested for compliance with the limits of computing devices pursuant to part 15 of FCC rules, which are designed to provide reasonable protection against radio frequency interference. Operation of this equipment in other environments may cause interference with radio communications, in which case the user at his own expense will be required to take whatever measures may be required to correct this interference.

## EVM Warnings and Restrictions

It is important to operate this EVM within the input voltage range of 2.3 V to 6 V and the output voltage range of 3 V to 6.5 V.

Exceeding the specified input range may cause unexpected operation and/or irreversible damage to the EVM. If there are questions concerning the input range, please contact a TI field representative prior to connecting the input power.

Applying loads outside of the specified output range may result in unintended operation and/or possible permanent damage to the EVM. Please consult the EVM User's Guide prior to connecting any load to the EVM output. If there is uncertainty as to the load specification, please contact a TI field representative.

During normal operation, some circuit components may have case temperatures greater than 60° C. The EVM is designed to operate properly with certain components above 60° C as long as the input and output ranges are maintained. These components include but are not limited to linear regulators, switching transistors, pass transistors, and current sense resistors. These types of devices can be identified using the EVM schematic located in the EVM User's Guide. When placing measurement probes near these devices during operation, please be aware that these devices may be very warm to the touch.

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
