

FEATURES

- Data rate up to 2.5Gb/s
- -23dBm typ. sensitivity
- 30µm active area PIN chip with GaAs pre-amplifier
- Small co-axial package with multi-mode fiber

APPLICATIONS

- High bit rate short haul optical transmission systems operating at 2.5Gb/s

DESCRIPTION

These PIN preamplifiers use an InGaAs PIN chip with GaAs IC preamplifier. The KT package is designed for a horizontal PC board mount. The LT package is secured by a vertical flange. Each package is connected with multi-mode fiber by Nd: YAG welding. The detector preamplifier is DC coupled and has a low electrical output when the PIN is illuminated. These devices are in compliance with ITU-T Recommendations and meet Bellcore Requirements.

Note: (1) CW condition

(2) Maximum Input Optical Power, Pmax is defined as the optical power when the variation of F.W.H.M. of the output waveform is less than 10% compared with that of the low input optical power level.

(3) Optical characteristics are specified on the condition that single mode fiber is used as the optical source for testing.

(4) No data is available for either device.
