

# POSISTOR® for Circuit Protection

### **EU RoHS Compliant**

- All the products in this catalog comply with EU RoHS.
- EU RoHS is "the European Directive 2011/65/EU on the Restriction of the Use of Certain Hazardous Substances in Electrical and Electronic Equipment."
- For more details, please refer to our website 'Murata's Approach for EU RoHS' (<http://www.murata.com/info/rohs.html>).

### PTC Thermistors (POSISTOR®) for Overcurrent Protection Chip Type

(Part Number)

PR	G	18	BB	470	M	B1	RB
①	②	③	④	⑤	⑥	⑦	⑧

#### ① Product ID

Product ID	
PR	PTC Thermistors Chip Type

#### ② Series

Code	Series
G	for Overcurrent Protection

#### ③ Dimensions (L×W)

Code	Dimensions (L×W)	EIA
15	1.00×0.50mm	0402
18	1.60×0.80mm	0603
21	2.00×1.25mm	0805

#### ④ Temperature Characteristics

Code	Temperature Characteristics
BB	Curie Point 100°C
BC	Curie Point 90°C

#### ⑤ Resistance

Expressed by three-digit alphanumerics. The unit is ohm ( $\Omega$ ). The first and second figures are significant digits, and the third figure expresses the number of zeros which follow the two figures. If there is a decimal point, it is expressed by the capital letter "R." In this case, all figures are significant digits.

Ex.	Code	Resistance
	4R7	4.7 $\Omega$
	470	47 $\Omega$
	471	470 $\Omega$

#### ⑥ Resistance Tolerance

Code	Resistance Tolerance
M	±20%

#### ⑦ Individual Specifications

B*	Bulk

## Basic Characteristics of POSISTOR®

### ■ Basic Characteristics

POSISTOR® has three main characteristics.

#### 1. Resistance - Temperature Characteristics

Although there is a negligible difference between the normal and "Curie Point" temperature, POSISTOR® shows almost constant resistance-temperature characteristics. Yet they have resistance-temperature characteristics that cause resistance to sharply increase when the temperature exceeds the Curie Point. The Curie Point (C.P.) is defined as the temperature at which the resistance value is twice the one at 25°C.

Resistance - Temperature Characteristic

#### 2. Current - Voltage Characteristics (Static Characteristic)

This shows the relation between applied voltage when voltage applied to POSISTOR® causes balancing of inner heating and outer thermal dissipation and stabilized current. This has both a maximum point of current and constant output power.

Current - Voltage Characteristic (Static Characteristic)

#### 3. Current - Time Characteristics (Dynamic Characteristic)

This shows the relation between current and time before inner heating and outer thermal dissipation arrive at equilibrium state. This features having large initial current and abruptly continuous attenuating portion.

Current - Time Characteristic (Dynamic Characteristic)

## Basic Characteristics of POSISTOR®

### Technical Terms

#### 1. Protective Threshold Current

The maximum current value is called the "Protective Threshold Current" for Voltage vs. Current characteristics (static).

When smaller than the protective threshold current flows in POSISTOR®, it reaches its stability (as shown in figure on right) at the intersection (A) of the load curve (a) and voltage-current characteristics of POSISTOR®(c). And POSISTOR® works as a normal fixed resistor.

However, when larger than protective threshold current flows, it stabilizes at the intersection (B) with the load curve (b).

Load Curve of Circuit and Voltage - Current Characteristics of POSISTOR®

#### 2. Protective Threshold Current Range

Protective threshold current varies depending on the ambient temperature, resistance value, temperature characteristics and shape. (see Figure on right) The maximum value of trip current and the minimum value of the hold current are in the range of ambient temperature -10 to +60°C.

That is, when a current is smaller than the hold current, POSISTOR® works only as a fixed resistor. When larger than the trip current flows, however, POSISTOR® protects the circuit from overload.

Protective Threshold Current Range

#### 3. Operating Time

A period starting from the voltage input to the moment current itself sharply attenuates is called "Operating Time." Conventionally, operation time ( $t_0$ ) is determined to be the period until inrush current ( $I_0$ ) decreases to a level one half the original inrush current ( $I_0/2$ ).

Operating Current

## Selection Guide

Please confirm the parameters according to the following questions.  
The best selection is the product that matches three parameters.

### ● Confirmation Items

Part Number	Max. Voltage (V)	Hold Current at +60°C (mA)	Trip Current at -10°C (mA)	Max. Current (A)	Resistance (at 25°C) (ohm)	Body Diameter (D) (mm)	Thick. (T) (mm)
PTGL18AR4R7M6B72B0	125	360	900	1.7	4.7 ±20%	18.5	5.5
PTGL18AR3R3M6B72B0	125	420	1050	2.0	3.3 ±20%	18.5	5.5
PTGL07AR330M6A51B0	140	100	230	0.5	33 ±20%	7.4	6.0
PTGL09AR220M6C61B0	140	140	330	1.0	22 ±20%	9.6	6.0
PTGL10AR150M6C61B0	140	170	400	1.0	15 ±20%	11.6	
PTGL12AR100M6C01B0	140	220	510	1.0	10 ±20%	13.0	
PTGL13AR6R8M6C01B0	140	290	670	1.0	6.8 ±20%	14.0	
PTGL16AR5R6M6C01B0	140	340	780	2.0	5.6 ±20%	17.0	

PTGL12AR100M6C01B0 is the best selection in this case.

## Application Notes

### ■ Inrush Current Limit for Power Supply

#### POSISTOR® Lead type: PTGL series

##### 1. Applications

POSISTOR® is an integrated solution to work as both current limit resistor and overcurrent fuse. It works as a stable resistor in normal operation and protects itself against overcurrent situations.

- (1) High wattage power supply (flat display panels etc.)
- (2) Power supply for fluorescent lights
- (3) Other switching power supplies

Replacement idea for a resistor and fuse solution

##### 2. Benefits

- (1) Protection against overcurrent situations
- (2) Automatic reset from protective trip mode
- (3) Space-saving
- (4) Various characteristics to meet a suitable resistance value

##### 3. Recommended part numbers

Choose an appropriate part number based on the resistance value required to the inrush current limit.  
Review the maximum voltage.

Application	Part Number	Max. Voltage (V)	Resistance (at 25 °C) (ohm)	Body Diameter (mm)	Thickness (mm)	Lead Space (mm)	Lead Diameter (mm)	More Details
For high wattage power supply	PTGL13AR100H8B72B0	265	10 ±25%	14.0	6.0	7.5	0.60	page 57
	PTGL12AR150H8B72B0		15 ±25%	12.5	6.0	7.5	0.60	page 57
	PTGL14AR180M9C01B0		18 ±20%	15.7	6.5	10.0	0.65	page 57
	PTGL09AR250H8B52B0		25 ±25%	10.0	6.0	5.0	0.60	page 57
	PTGL09AR390M9C61B0		39 ±20%	10.0	6.5	6.5	0.65	page 56
For power supply of electronic fluorescent ballasts	PTGL07AR560M9B51A0	280	56 ±20%	8.2	6.5	5.0	0.60	-

	PTGL07AS181M0N51A0		180 ±20%	7.8	6.0	5.0	0.50	page 67

Please ask for details.

## Application Notes

### ■ Overcurrent Protection for Communication Facility

POSISTOR® Lead type: PTGL series

#### 1. Applications

POSISTOR® is an efficient device to protect a telephone line interface (SLIC: Subscriber-Loop-Interface-Circuit) against AC line contact.

- (1) Landline telephones or FAX machines
- (2) Telephone interface of STB, VoIP equipment
- (3) Any other equipment of communication facility having a phone line interface

Replacement idea for a current fuse.

#### 2. Benefits

- (1) Automatic reset from protective trip up to 265V AC line contact
- (2) Compatible with the 600V over voltage test by UL60950
- (3) High resistance to the lighting surge (\*A surge absorber is still required to protect SLIC)

#### 3. Recommended part numbers

Choose an appropriate part number based on the hold current and on the resistance value required to the operation current of SLIC.

Part Number	Max. Voltage (V)	Max. Current (A)	Hold Current (at +60 °C) (mA)	Trip Current (at -10 °C) (mA)	Resistance (at +25 °C) (ohm)	Body Diameter (mm)	Thickness (mm)	Lead Space (mm)	Lead Diameter (mm)	More Details

Please ask for details.

## Application Notes

### ■ Current Limiter for LED

#### Chip POSISTOR®: PRG series

##### 1. Applications

POSISTOR® is an effective current limit solution based on LED's allowable current and temperature characteristics.

- (1) LED lighting instruments
- (2) LED backlight of flat displays

See below figures.

##### 2. Benefits

- (1) Higher LED brightness versus a fixed resistor. LED can work in the smaller series resistance with POSISTOR® at normal operation temperature. The number of LEDs is possibly reduced.
- (2) LED lifetime may be extended due to the current limiting function of the POSISTOR® in cases of overheat or overcurrent situation.
- (3) Small 0805 package allows the POSISTOR® to be placed close to the LED. It offers accurate detection of ambient temperature near LED and increases flexibility of packaging.

##### 3. Recommended part numbers

Choose an appropriate part number having max. voltage and resistance value. Review the protective threshold current range based on the operating current and temperature of the LED.

Part Number	Max. Voltage (V)	Max. Current (A)	Hold Current (at +60 °C) (mA)	Trip Current (at -10 °C) (mA)	Resistance (at +25 °C) (ohm)	Curie Point (°C) *	More Details
PRG21BC0R6MM1RA	6	10	285	1100	0.6 ±20%	90	page 14
PRG21BC0R2MM1RA	6	10	500	2000	0.2 ±20%	90	page 14
PRG21BC1R0MM1RA	12	10	220	850	1.0 ±20%	90	page 14
PRG21BC2R2MM1RA	16	6.5	150	600	2.2 ±20%	90	page 14
PRG21BC3R3MM1RA	20	6.0	120	480	3.3 ±20%	90	page 14
PRG21BC6R8MM1RA	30	3.5	80	320	6.8 ±20%	90	page 14
PRG21BC4R7MM1RA	30	5.0	100	400	4.7 ±20%	90	page 14

\*Curie Point means the temperature at which the resistance value reaches twice the resistance at 25°C.  
Please ask for details.

## Application Notes

### ■ Overheat/Overcurrent Protection for High Brightness LED

Leaded POSISTOR®: PTGL series & Chip POSISTOR®: PRG series

#### 1. Applications

POSISTOR® is an effective solution to protect the LED against overheat and overcurrent situation.

(1) LED lighting instruments (Appliances, Automotive etc.)

#### 2. Benefits

- (1) Posistor installed in series with LED provides both overheat and overcurrent protection
- (2) No additional driver IC or software required

- (3) Automatic reset from protective trip mode
- (4) 0603 and 0805 SMD type available (smaller than 1/2W or 1W chip resistor)

#### 3. Recommended part numbers

Choose an appropriate part number having max. voltage and resistance value. Review the protective threshold

current range based on the operating current and temperature of the LED.

Type	Part Number	Max. Voltage (V)	Max. Current (A)	Hold Current (at +60 °C) (mA)	Trip Current (at -10 °C) (mA)	Resistance (at +25 °C) (ohm)	Curie Point (°C) *	More Details

Please ask for details.

# POSISTOR® for Circuit Protection

**muRata**

1

## Overcurrent Protection Chip Type

Overcurrent Protection device with resettable function  
suitable for current limiting resistor.

This product is a chip type PTC thermistor for  
overcurrent protection that is suitable for the  
following.

- Countermeasure for short circuit testing
- Current limiting resistor

Part Number	Dimensions (mm)				
	L	W	T	e	g
PRG15_RC	1.0±0.05	0.5±0.05	0.5±0.05	0.15 to 0.35	-

### ■ Features

1. Rapid operation to protect the circuit in an overcurrent condition abnormality such as a short circuit.  
By removing the overcurrent condition, these products automatically return to the initial condition and can be used repeatedly.
2. Suitable for countermeasure to short circuit test in safety standard.
3. Stable resistance after operation due to ceramic PTC.
4. Similar size (0603 size) is possible due to the large capacity for electric power.
5. Possible to use these products as current limiting resistors with overcurrent protection functions
6. The SMD type's small size and light weight are helpful in miniaturizing the circuit.

### Chip Type 0402(1005) Size

Part Number	Max. Voltage (V)	Hold Current (at +60°C) (mA)	Hold Current (at +25°C) (mA)	Trip Current (at +25°C) (mA)	Trip Current (at -10°C) (mA)	Max. Current (mA)	Resistance (at +25°C) (ohm)
PRG15BC330MM1RC	30	25	38	73	92	1200	33 ±20%
PRG15BC220MM1RC	16	28	43	90	113	1000	22 ±20%
PRG15BC180MM1RC	16	31	47	98	125	1200	18 ±20%

\*1: The resistance value after the test is measured by 4-terminal method with less than 10mA (DC0.1V), after storage in 25±2°C for 2 hrs.

\*2: Above mentioned soldering is done following condition at our side.

- Glass-Epoxy PC board
- Standard land dimension
- Standard solder paste
- Standard solder profile

Above conditions are mentioned in Notice.

\*3: We cannot guarantee the resistance change in Thermal Shock in case of defective mounting.

(Note)

No.11 High Temperature Load is based on Glass-Epoxy PC board which thermal dissipation coefficient of a mounting state is 2.2mW/°C. In other condition of 2.2mW/°C, High Temperature Load characteristics may change.

# POSISTOR® for Circuit Protection

## Overcurrent Protection Narrow Current Band 30V Series

2

This product is a leaded type PTC thermistor for overcurrent protection which is suitable for a current limiting resistor.

### ■ Features

1. Small fluctuation in the circuit due to resistance tolerance  $\pm 10\%$
2. Narrow current range (less than twice) between operating and non-operating current at  $-10$  to  $60$  degrees C.
3. Quick operating time due to small size compared with conventional products.
4. Best suited to meet the requirements for power supplies and motor protection. Error-free operations are assured by rush current.
5. Circuit is protected until current is turned off.
6. Restores the original low resistance value automatically once the overload is removed.
7. Non-contact design leads to long life and no noise.  
Durable and strong against mechanical vibration and shock because it is a solid element.

## Overcurrent Protection Narrow Current Band 51/60V Series

3

This product is a leaded type PTC thermistor for overcurrent protection which is suitable for a current limiting resistor.

### ■ Features

1. Small fluctuation in the circuit due to resistance tolerance  $\pm 10\%$
2. Narrow current range (less than twice) between operating and non-operating current at  $-10$  to  $60$  degrees C.
3. Quick operating time due to small size compared with conventional products.
4. Best suited to meet the requirements for power supplies and motor protection. Error-free operations are assured by rush current.
5. Circuit is protected until current is turned off.
6. Restores the original low resistance value automatically once the overload is removed.
7. Non-contact design leads to long life and no noise.  
Durable and strong against mechanical vibration and shock because it is a solid element.

## Overcurrent Protection 16V Series

This low-voltage, low-resistance type "POSISTOR" is a circuit protector whose resistance value in normal operation is very low and in abnormal situations like motor lock or short circuit, will be increased to restrain overcurrent. This "POSISTOR" is most suitable for low-voltage circuits.

### ■ Features

1. Best suited to meet the requirements for power supplies and motor protection. Error-free operation is assured by rush current.
2. Circuit is protected until current is turned off.
3. Restores the original low resistance value automatically once the overload is removed.
4. Non-contact design leads to long life and no noise.  
Durable and strong against mechanical vibration and shock because it is a solid element.

## Overcurrent Protection 24/30/32V Series

The safety resistor "POSISTOR" is most suited to meet the requirements of the safety standard short-circuit tests such as IEC, VDE, BS, UL, CSA, etc., worldwide.

### ■ Features

1. Best suited to meet the requirements of the short-circuit test. Quick response compared with current fuse and resistor and error-free operation are assured.
2. Small size save board space. Capable of being mounted anywhere because replacement is not required.
3. Actuates by excessive current during the short-circuit test to restrain abnormal heat generation in other circuit components and printed boards. This state will be maintained until the abnormal state is removed or power is turned off to reset the "POSISTOR" to the original state. Surface temperature of "POSISTOR" is kept low, below a certain value, during the actuation.
4. Non-contact design leads to long life and no noise. Durable and strong against mechanical vibration and shock because it is a solid element.

# POSISTOR® for Circuit Protection

## Overcurrent Protection 56/80V Series

"POSISTOR" is a circuit protector whose resistance value in normal operation is very low and in abnormal situations like overcurrent or overheating, will be increased to restrain overcurrent. "POSISTOR" can be used for overcurrent protection against current fuse or temperature fuse, due to its ability to return to its initial condition when overcurrent is removed.

### ■ Features

1. Best suited to meet the requirements for power supplies and motor protection. Error-free operations are assured by rush current.
2. Circuit is protected until current is turned off.
3. Restores the original low resistance value automatically once the overload is removed.
4. Non-contact design leads to long life and no noise. Durable and strong against mechanical vibration and shock because it is a solid element.

### ■ Applications

1. DC cooling fan motors in office equipment, e.g., computers, facsimiles, floppy disk drives and power units.
2. DC drive motors in VTRs and cassette tape recorders. Power transformers (at secondary winding)

# POSISTOR® for Circuit Protection

**muRata**

## Overcurrent Protection 250/265V Series

"POSISTOR" is a circuit protector whose resistance value in normal operation is very low and in abnormal situations like overcurrent or overheating, will be increased to restrain overcurrent. "POSISTOR" can be used for overcurrent protection against current fuse or temperature fuse, due to its ability to return to its initial condition when overcurrent is removed.

### ■ Features

1. Best suited to meet the requirements for power supplies and motor protection. Error-free operations are assured by rush current.
2. Circuit is protected until current is turned off.
3. Restores the original low resistance value automatically once the overload is removed.
4. Non-contact design leads to long life and no noise. Durable and strong against mechanical vibration and shock because it is a solid element.

## PTGL Series Narrow Current Band Specifications and Test Methods

No.	Item	Rating Value	Method of Examination						
1	Operating Temperature	-30 to +85°C	The temperature range with maximum voltage applied to the POSISTOR®.						
2	Storage Temperature	-40 to +125°C	The temperature range with zero voltage.						
3	Resistance Value (at 25°C)	Satisfies ratings	Resistance value is measured by applying voltage under 1.0Vdc (by a direct current of less than 10mA) at 25°C. But it must be measured after maximum voltage is applied for 180 seconds and then is left for 2 hours at 25°C.						
4	Withstanding Voltage	No problem	We apply AC voltage 120% that of the maximum voltage to POSISTOR® by raising voltage gradually for 180±5 seconds at 25°C. (A protective resistor is to be connected in series, and the inrush current through POSISTOR® must be limited below maximum rated value.)						
5	Protective Threshold Current	Satisfies ratings (Trip Current, Hold Current)	Maximum current is measured in this examination. Voltage is applied to POSISTOR® for 3 minutes step by step on still air based on "Protective Threshold Current Test Conditions" shown in next page. Stable current is measured at each step.						
6	Tensile Strength of Lead Wire Terminal	No damage	<p>The load is gradually applied to each terminal of POSISTOR® until the force of the following table in the axial direction with fixing POSISTOR®'s body itself and this load is kept for 10 seconds.</p> <table><tr><th>Lead Diameter</th><th>Force</th></tr><tr><td>ø0.60mm max.</td><td>4.90N</td></tr><tr><td>ø0.65mm min.</td><td>9.80N</td></tr></table>	Lead Diameter	Force	ø0.60mm max.	4.90N	ø0.65mm min.	9.80N
Lead Diameter	Force								
ø0.60mm max.	4.90N								
ø0.65mm min.	9.80N								
7	Bending Strength of Lead Wire Terminal	Lead wire does not come off	<p>POSISTOR® is held so that it is perpendicular to the lead wire with the following lead hanging in the axial direction of the lead wire.</p> <p>The lead wire is slowly bent to 90° and returned.</p> <p>Then it is slowly bent in the opposite direction and returned to original state.</p> <table><tr><th>Lead Diameter</th><th>Force</th></tr><tr><td>ø0.60mm max.</td><td>2.45N</td></tr><tr><td>ø0.65mm min.</td><td>4.90N</td></tr></table>	Lead Diameter	Force	ø0.60mm max.	2.45N	ø0.65mm min.	4.90N
Lead Diameter	Force								
ø0.60mm max.	2.45N								
ø0.65mm min.	4.90N								
8	Solderability	Solder is applied around the lead wire covering 3/4 or more of the circumference without gap in the axial direction.	The Lead wire of POSISTOR® is soaked in an Isopropyl Alcohol (JIS K 8839) solution (about 25wt%) of colophony (JIS K 5902) for 5-10 sec. Each lead wire is soaked in molten solder (JIS Z 3282 H60A) at 235±5°C from the bottom to a point of 2.0-2.5mm for 2±0.5 seconds.						
9	Terminal Durability of Soldering	ΔR/R25≤±15%	The lead wire of POSISTOR® is soaked in molten solder (JIS Z 3282 H60A) at 350±10°C from the bottom to a point of 2.0-2.5mm for 3.5±0.5 seconds.	After the device is left at room temperature (25°C) for 24±4 hours, the resistance is then measured.					
10	Humidity Test	ΔR/R25≤±20%	POSISTOR® is set in an environmental chamber at 60±2°C and 90-95% humidity for 500±4 hours.	After the device is left at room temperature (25°C) for one hour, the resistance measurement is then performed.					
11	Load Test at High Temperature	ΔR/R25≤±20%	POSISTOR® is set in an environmental chamber at 85±3°C with maximum voltage applied for 500±4 hours. After the device is left at room temperature (25°C) for one hour, the resistance measurement is performed. (A protective resistor is to be connected in series and the inrush current through POSISTOR® must be limited below maximum rated value.)						
12	Load Cycle Test at Room Temperature	ΔR/R25≤±20%	POSISTOR® is set at room temperature (25±2°C) with maximum voltage applied for 1 minute and then is left without voltage applied for 5 minutes. This cycle is repeated for 100 cycles, and after the device is left at room temperature (25°C) for one hour, the resistance measurement is performed. (A protective resistor is to be connected in series and the inrush current through POSISTOR® must be limited below maximum rated value.)

### ■ Protective Threshold Current Test Conditions

#### 1. Substrate

Materials: Phenol

Size: 50x50x1.6mm

Land Pattern: Cu land without through hole

#### 2. Measurement condition

Solder POSISTOR® on the substrate, then put a 150mm<sup>3</sup> cover surrounding POSISTOR® to prevent airflow.

#### 3. Measurement circuit

## PTGL Series Specifications and Test Methods

Item	Rating Value	Method of Examination						
Continuous Operating Temperature	-10 to +60 °C	The temperature range with maximum voltage applied to the POSISTOR®.						
Resistance Value (at 25°C)	Satisfies ratings	Resistance value is measured by applying voltage under 1.5Vdc (by a direct current of less than 10mA) at 25°C. But it must be measured after maximum voltage is applied for 180 seconds and then is left for 2 hours at 25°C. As for 16V series, measurement probes should be connected on the lead wire at the point within 2mm from the below side of the forming. Resistance should be measured by 4 wiring method.						
Withstanding Voltage	No problem	We apply AC voltage 120% (16V Series: 110%) that of the maximum voltage to POSISTOR® by raising voltage gradually for 180±5 seconds at 25°C. (A protective resistor is to be connected in series, and the inrush current through POSISTOR® must be limited below max. rated value.)						
Tensile Strength of Lead Wire Terminal	No damage	<p>The load is gradually applied to each terminal of POSISTOR® until the force of the following table in the axial direction with fixing POSISTOR®'s body itself and this load is being kept for 10 seconds.</p> <table><tr><th>Lead Diameter</th><th>Force</th></tr><tr><td>ø0.60mm max.</td><td>4.90N</td></tr><tr><td>ø0.65mm min.</td><td>9.80N</td></tr></table>	Lead Diameter	Force	ø0.60mm max.	4.90N	ø0.65mm min.	9.80N
Lead Diameter	Force							
ø0.60mm max.	4.90N							
ø0.65mm min.	9.80N							
Bending Strength of Lead Wire Terminal	Lead wire does not come off.	<p>POSISTOR® is held so that it is perpendicular to the lead wire with the following lead hanging in the axial direction of the lead wire. The lead wire is slowly bent to 90° and returned. Then it is slowly bent in the opposite direction and returned to original state.</p> <table><tr><th>Lead Diameter</th><th>Force</th></tr><tr><td>ø0.60mm max.</td><td>2.45N</td></tr><tr><td>ø0.65mm min.</td><td>4.90N</td></tr></table>	Lead Diameter	Force	ø0.60mm max.	2.45N	ø0.65mm min.	4.90N
Lead Diameter	Force							
ø0.60mm max.	2.45N							
ø0.65mm min.	4.90N							
Solderability	Solder is applied around the lead wire covering 3/4 or more of the circumference without gap in the axial direction.	The Lead wire of POSISTOR® is soaked in an Isopropyl Alcohol (JIS K 8839) or ethanol (JIS K 8101) solution (about 25wt%) of colophony (JIS K 5902) for 5 to 10 sec. And, each lead wire is soaked in molten solder (JIS Z 3282 H60A) at 235±5°C from the bottom to a point of 2.0 to 2.5mm for 2±0.5 sec.						
Terminal Durability of Soldering	ΔR/R25≤±15%	The lead wire of POSISTOR® is soaked in molten solder (JIS Z 3282 H60A) at 350±10°C from the bottom to a point of 2.0 to 2.5mm for 3.5±0.5 sec. After the device is being left at room temperature (25°C) for 24±4 hours, the resistance is measured.						
Humidity Test	ΔR/R25≤±20%	POSISTOR® is set in an environmental chamber at 40±2°C and 90 to 95% humidity for 500±4 hours. After the device is left at room temperature (25°C) for one hour, the resistance measurement is performed.						
Load Cycle Test at High Temperature	ΔR/R25≤±20%	POSISTOR® is set in an environmental chamber at 60±3°C with maximum voltage applied for 1.5 hours and then is left without voltage applied for 0.5 hours. This cycle is repeated for 1000±10 hours, and after the device is left at room temperature (25°C) for one hour, the resistance measurement is performed. (A protective resistor is to be connected in series and the inrush current through POSISTOR® must be limited below max. rated value.)						

# POSISTOR® for Circuit Protection

## Inrush Current Suppression (Less than 100μF)

POSISTOR® is one of lead type PTC Thermistor that is able to support overcurrent or inrush current issue on the power supply circuit.

It is able to integrated circuit for protection from inrush current suppression with POSISTOR® and relay or semiconductor switch as thyristor.

### ■ Features

1. Protection against overcurrent situations
2. Automatic reset from protective trip mode
3. Space-saving
4. Various characteristics to meet a suitable resistance value

### ■ Applications

POSISTOR® is an integrated solution to work as both current limit resistor and overcurrent fuse. It works as a stable resistor in normal operation and products itself against overcurrent situation.

It can be replaced from normal resistor or the resistor with temperature fuses solution as Fig.1.

Fig.1

POSISTOR® works as normal resistor in normal condition, and it works as protector against over current situation on the circuit.

1. High-power switching power supply (LCD TV)
2. The power supply for inverter on outside unit for Air-conditioner
3. The power supply for inverter type fluorescent lamp
4. Other SW type power supply

Part Number	Max. Voltage (V)	Resistance (at +25°C) (ohm)	Max. Inrush Current (A)	Max. Applying Time of Inrush (ms)	Body Diameter (D) (mm)	Thickness (T) (mm)	Lead Space (F) (mm)	Lead Diameter (phi d) (mm)
PTGL07AS121M0N51B0	280	120 ±20%	8.46 peak	10	7.8	6.0	5.0	0.5
PTGL07AS181M0N51B0	280	180 ±20%	6.22 peak	10	7.8	6.0	5.0	0.5
PTGL07AS201M0N51B0	280	200 ±20%	5.66 peak	10	7.8	6.0	5.0	0.5

Max. inrush current shows the maximum inrush current value which be introduced into "POSISTOR" at operating temperature range.

Max. applying time of inrush shows the maximum applying time of inrush current value at operating temperature range.

Operating temperature range is -40 to +105°C.

Taping type of part numbers with "A0" is available.

# POSISTOR® for Circuit Protection

## Inrush Current Suppression for High Capacitance (100μF or more)

POSISTOR® is one of lead type PTC Thermistor that is able to support overcurrent or inrush current issue on the power supply circuit.

It is able to integrated circuit for protection from inrush current suppression with POSISTOR® and relay or semiconductor switch as thyristor.

### ■ Features

1. Protection against overcurrent situations
2. Automatic reset from protective trip mode
3. Space-saving
4. Various characteristics to meet a suitable resistance value

### ■ Applications

POSISTOR® is an integrated solution to work as both current limit resistor and overcurrent fuse. It works as a stable resistor in normal operation and products itself against overcurrent situation.

It can be replaced from normal resistor or the resistor with temperature fuses solution as Fig.1.

Max. inrush current shows the maximum applying time of inrush current value at operating temperature range.

Max charge energy is defined as the maximum charged up energy value of over 95%.

The capacitance is calculated as the following formula.

$$J = CV^2/2 \quad C: \text{capacitance, } V: \text{peak voltage}$$

Note: The criteria of the standard for the maximum charged up energy value of over 95%.

If there is the difference between our definition and yours, could you ask us free?

Operating temperature range is -20 to +85°C.

## Inrush Current Suppression Specifications and Test Methods

Item	Rating Value	Method of Examination
Humidity Test	$\Delta R/R_{25} \leq \pm 20\%$	POSISTOR® is set in an environmental chamber at $85 \pm 3^\circ\text{C}$ and 85% humidity for $500 \pm 4$ hours. After the device is left at room temperature ( $25^\circ\text{C}$ ) for one hour, the resistance measurement is performed.
High Temperature Continuous Load	$\Delta R/R_{25} \leq \pm 20\%$	POSISTOR® is set in an environmental chamber at $85 \pm 3^\circ\text{C}$ with maximum voltage applied for $500 \pm 4$ hours. After the device is left at room temperature ( $25^\circ\text{C}$ ) for one hour, the resistance measurement is performed.
Load Cycle Test at Room Temperature	$\Delta R/R_{25} \leq \pm 20\%$	POSISTOR® is set in a room temperature ( $25 \pm 2^\circ\text{C}$ ) with maximum voltage applied for 1 minute, and then is left without voltage applied for 5 minutes. This cycle is repeated for 10k cycles, and after the device is left at room temperature ( $25^\circ\text{C}$ ) for one hour, the resistance measurement is performed.

# POSISTOR® for Circuit Protection

## Overheat Sensing Chip Tight Tolerance Type

This chip PTC Thermistor is a reflow soldering SMD type for overheat sensing for power transistors, power diodes and power ICs in hybrid circuits.

### ■ Features

1. SMD type is helpful for miniaturizing circuits because of its small size and light weight.
2. Excellent thermal response due to small size
3. Solid-state construction provides excellent resistance to mechanical vibration and impact resistance.
4. Contactless operation provides noiseless operation.

Part Number	Dimensions (mm)				
	L	W	T	e	g
PRF15_RC	1.0±0.05	0.5±0.05	0.5±0.05	0.15 to 0.4	0.3 min.
PRF18_RB	1.6±0.15	0.8±0.15	0.8±0.15	0.1 to 0.6	-

### Chip Tight Tolerance Type 0402 (1005) Size

Part Number	Sensing Temperature (at 10k ohm) (°C)	Sensing Temperature (at 100k ohm) (°C)	Maximum Voltage (V)	Resistance (at 25°C) (k ohm)	Operating Temperature Range (°C)
PRF15AR102RB6RC	135 ±5°C	150 ±3°C	32	1 ±50%	-40 to 160
PRF15BA102RB6RC	125 ±5°C	140 ±3°C	32	1 ±50%	-40 to 150
PRF15BB102RB6RC	115 ±5°C	130 ±3°C	32	1 ±50%	-40 to 140
PRF15BC102RB6RC	105 ±5°C	120 ±3°C	32	1 ±50%	-40 to 130
PRF15BD102RB6RC	95 ±5°C	110 ±3°C	32	1 ±50%	-40 to 120
PRF15BE102RB6RC	85 ±5°C	100 ±3°C	32	1 ±50%	-40 to 110
PRF15BF102RB6RC	75 ±5°C	90 ±3°C	32	1 ±50%	-40 to 100
PRF15BG102RB6RC	65 ±5°C	80 ±3°C	32	1 ±50%	-40 to 90

This series is applied to reflow soldering.

Part Number	Sensing Temperature (at 4.7M ohm) (°C)	Maximum Voltage (V)	Resistance (at 25°C) (k ohm)	Operating Temperature Range (°C)
PRF15BB103RB6RC	130 ±3°C	32	10 ±50%	-20 to 140
PRF15BE103RB6RC	100 ±3°C	32	10 ±50%	-20 to 110
PRF15BG103RB6RC	80 ±3°C	32	10 ±50%	-20 to 90

This series is applied to reflow soldering.

### Chip Tight Tolerance Type 0603 (1608) Size

Part Number	Sensing Temperature (at 4.7k ohm) (°C)	Sensing Temperature (at 47k ohm) (°C)	Maximum Voltage (V)	Resistance (at 25°C) (ohm)	Operating Temperature Range (°C)
PRF18BB471RB5RB	115 ±3°C	130 ±7°C	32	470 ±50%	-20 to 140

## Overheat Sensing Lead Type

"PTFM Series" is a screw clamp type temperature sensor which has been developed for sensing the temperature of Transistors, Thyristors, stereo main amplifiers, and other devices having risk of overheat.

"PTFL Series" is a popular lead type temperature sensor which is suitable for use as an air temperature sensing.

"PTFM\_S" Series is a screw clamp type temperature sensor which have high environmental reliability. It is certified by UL/cUL/VDE.

### ■ Features

1. PTFM\_S Series is fixed easily to objects because of a screw clamp type.
2. Compact and light design as well as excellent thermal response.
3. Contactless operation provides a prolonged service life, yet permits noiseless operation.
4. The operating point of "POSISTOR" is set on the steepest point along the resistance-temperature characteristic curve, thus performing the overheat protective operation securely.
5. PTFM Series and PTFL Series have same resistance-temperature characteristics, providing a selection depending on the mounting method.
6. PTFM\_S Series is certified by UL/cUL/VDE.  
It is suitable for a powersupply, etc, required the safety standard.

Part Number (Lead Type)	Part Number (with Lug-Terminal Type)	Max. Voltage (V)	Sensing Temp. (TS) (°C)	Resistance Value at 25°C (max.) (ohm)	Resistance Value (TS-10°C) (max.) (ohm)	Resistance Value (TS°C) (min.) (ohm)
PTFL04BH471Q2N34B0	PTFM04BH471Q2N34BS	16	60	100	330	470
PTFL04BG471Q2N34B0	PTFM04BG471Q2N34BS	16	70	100	330	470
PTFL04BF471Q2N34B0	PTFM04BF471Q2N34BS	16	80	100	330	470

## Temperature Sensor Lead Type Specifications and Test Methods

No.	Item	Rating Value	Method of Examination						
1	Resistance Value	Satisfies specification	Resistance value is measured by applying voltage under 1.5Vdc (by a direct current of less than 10mA) in a silicone oil vessel.						
2	Withstanding Voltage	No problem	We apply AC voltage 120% that of the maximum voltage to POSISTOR® by raising voltage gradually for 180±5 seconds at 25°C. (A protective resistor is to be connected in series, and the inrush current through POSISTOR® must be limited below max. rated value.)						
3	Tensile Strength of Lead Wire Terminal	No damage	The load is gradually applied to each terminal of POSISTOR® until 9.80N in the axial-direction with fixing POSISTOR®'s body itself and this load is kept for 10 seconds.						
4	Bending Strength of Lead Wire Terminal	Lead wire does not come off.	<p>POSISTOR® is held so that it is perpendicular to the lead wire with the following load hanging in the axial direction of the lead wire. The lead wire is slowly bent to 90° and returned; then it is slowly bent in the opposite direction and returned to original state. (Above mentioned procedure is done slowly with one cycle.)</p> <table><tr><th>Series</th><th>Force</th></tr><tr><td>PTFL</td><td>2.45N</td></tr><tr><td>PTFM</td><td>4.90N</td></tr></table>	Series	Force	PTFL	2.45N	PTFM	4.90N
Series	Force								
PTFL	2.45N								
PTFM	4.90N								
5	Solderability	Solder is applied around the lead wire covering 3/4 or more of the circumference without gap in the axial-direction.	The lead wire of POSISTOR® is soaked in a Isopropyl Alcohol (JIS K 8839) or ethanol (JIS K 8101) solution (about 25wt%) of colophony (JIS K 5902) for 5-10 sec. And, each lead wire is soaked in molten solder (JIS Z 3282 H60A) at 235±5°C from the bottom to a point of 2.0-2.5mm for 2±0.5 seconds.						
6	Terminal Durability of Soldering	$\Delta R/R_{25} \leq \pm 15\%$	The lead wire of POSISTOR® is soaked in molten solder (JIS Z 3282 H60A) at 350±10°C from the bottom to a point of 2.0-2.5 mm for 3.5±0.5 seconds. And, after the device is left at room temperature (25°C) for 24±4 hours, the resistance is measured.						
7	Damp Heat	$\Delta R/R_{25} \leq \pm 20\%$	POSISTOR® is set in an environmental chamber at 40±2°C and 90-95% humidity for 500±4 hours. And after the device is left at room temperature (25°C) for one hour, the resistance measurement is performed.						
8	High Temperature Load	$\Delta R/R_{25} \leq \pm 20\%$ <div><p>Test circuit</p></div>	<p>POSISTOR® is set in an environmental chamber at 85±3°C with maximum voltage applied for 1.5 hours and then is left without voltage applied for 0.5 hours. This cycle is repeated for 1000±10 hours, and after the device is left at room temperature (25°C) for one hour, the resistance measurement is performed. (A protective resistor is to be connected in series and the inrush current through POSISTOR® must be limited below max. rated value.)</p>						

## ⚠Caution/Notice

### ■ ⚠Caution (Storage and Operating Condition)

This product is designed for application in an ordinary environment (normal room temperature, humidity and atmospheric pressure). Do not use under the following conditions because all of these factors can deteriorate the characteristics or cause product failure and burn-out.

1. Corrosive gas or deoxidizing gas (Chlorine gas, Hydrogen sulfide gas, Ammonia gas, Sulfuric acid gas, Nitric oxide gas, etc.)
2. Volatile or flammable gas
3. Dusty conditions
4. Under vacuum, or under high or low pressure
5. Wet or humid conditions
6. Places with salt water, oils, chemical liquids or organic solvents
7. Strong vibrations
8. Other places where similar hazardous conditions exist

### ■ ⚠Caution (Other)

Be sure to provide an appropriate fail-safe function on your product to prevent secondary damage that may be caused by the abnormal function or the failure of our product.

### ■ Notice (Storage and Operating Condition)

To keep solderability of product from declining, the following storage conditions are recommended.

1. Storage condition:  
Temperature -10 to +40 degrees C  
Humidity less than 75%RH (not dewing condition)
2. Storage term:  
Use this product within 6 months after delivery by first-in and first-out stocking system.
3. Handling after unpacking:  
After unpacking, promptly reseal this product or store it in a sealed container with a drying agent.
4. Storage place:  
Do not store this product in corrosive gas (Sulfuric acid, Chlorine, etc.) or in direct sunlight.

### ■ Notice (Soldering and Mounting)

#### PTGL Series

When the lead of this product is soldered, observe the following points to avoid the decline of element characteristics or break-down of the element.

1. Use rosin type flux or non-activated flux
2. Do not dip the body into flux (flux should be coated to lead wire only for soldering).
3. Be sure that preheating does not melt the soldering of this product.

### ■ Notice (Soldering and Mounting)

#### PTFL/PTFM Series

1. PTFM Series is to be screwed beside the Power-Transistor on the radiative plate.
2. If PTFL Series is to be mounted with thermal cement, the cement should not be of the Cyano Acrylate family.
3. Please bend the lead wire far from the root of the body and do not apply force to the lead wire of the product.
4. When the lead of this product is soldered, observe the following points to avoid the decline of element characteristics or break-down of the element.
  - (1) Use rosin type flux or non-activated flux.
  - (2) Do not dip the body into flux.  
(Flux should be coated to lead wire only for soldering.)
  - (3) Be sure that preheating does not melt the soldering of this product.

## ⚠️ Caution/Notice

### ■ Notice (Soldering and Mounting) PRG15 Series

#### 1. Solder and Flux

##### (1) Solder Paste

Use solder paste Sn:Pb=63:37wt%.

For your reference, we are using

63Sn/37Pb RMA9086 90-3-M18,

manufactured by Alpha Metals Japan Ltd.

96.5Sn/3.0Ag/0.5Cu M705-GRN360-K2-V,

manufactured by Senju Metal Industry Co., LTD for any Internal tests of this product.

##### (2) Flux

Use rosin type flux in soldering process.

If below flux is used, some problems might be caused in the product characteristics and reliability.

Please do not use below flux.

- Strong acidic flux (with halide content exceeding 0.2wt%).

- Water-soluble flux

(\*Water-soluble flux can be defined as non rosin type flux including wash-type flux and non-wash-type flux.)

#### 2. Cleaning Conditions and Drying

To remove the flux after soldering, observe the following points in order to avoid deterioration of the characteristics or any change to the external electrodes quality.

##### (1) Cleaning Conditions

Solvent	Dipping Cleaning	Ultrasonic Cleaning
2-propanol	Less than 5 minutes at room temp. or Less than 2 minutes at 40°C max.	Less than 1 minute 20W/L Frequency of several 10kHz to 100kHz.

A sufficient cleaning should be applied to remove flux completely.

##### (2) Drying

After cleaning, promptly dry this product.

#### 3. Soldering Conditions

In your mounting process, observe the following points in order to avoid deterioration of the characteristics or destruction of this product. The mounting quality of this product may also be affected by the mounting conditions, shown in the points below.

This product is for reflow soldering only. Flow soldering should not be allowed.

##### (1) Printing Conditions of Solder Paste

(a) Standard thickness of solder paste printing should be from 0.10 to 0.15 mm.

(b) After soldering, the solder fillet should be a height from 0.15 mm to the thickness of this product (see the figure at right).

(c) Too much solder gives too strong mechanical stress to this product. Such stress may cause cracking or other mechanical damage. Also, it can destroy the electrical performance of this product.

Continued on the following page. ↗

## ⚠Caution/Notice

Continued from the preceding page.

### (2) Reflow soldering conditions

The following figure and table show our recommended reflow profile.

- (a) Insufficient preheating may cause a crack on ceramic body. The temperature difference between preheat and peak should be control within 100°C to prevent this.
- (b) The excessive soldering conditions may cause dissolution of metallization or deterioration of solder-wetting on the external electrode.
- (c) Rapid cooling by dipping in solvent or by other means is not recommended.
- (d) Please evaluate it on your condition if you will do mounting using not applying condition to the above-mentioned.

- (3) There may be a risk of unexpected failures (tombstone, insufficient solder-wetting, etc.) in the mounting process, caused by the mounting conditions. Please make sure that this product is correctly mounted under specified mounting conditions.

## ⚠Caution/Notice

After cleaning, promptly dry this product.

#### 3. Soldering Conditions

In your mounting process, observe the following points in order to avoid deterioration of the characteristics or destruction of this product. The mounting quality of this product may also be affected by the mounting conditions, shown in the points below.

##### (1) Printing Conditions of Solder Paste

- (a) Recommended thickness of solder paste printing should be from 0.15 to 0.20mm.
- (b) After soldering, the solder fillet should be a height from 0.2 mm to the thickness of this product (see the figure at right).
- (c) Too much solder result in excessive mechanical stress on this product. Such stress may cause cracking or other mechanical damage. Also, it can destroy the electrical performance of this product.

Continued on the following page. ↗

## ⚠Caution/Notice

Continued from the preceding page.

### (2) Adhesive Application and Curing

- If insufficient adhesive is applied, or if the adhesive is not sufficiently hardened, this product may have a loose contact with the land, during flow soldering.
- Too low viscosity of adhesive causes this product to slip on the board, after mounting.

Allowable Flow Soldering Temp. and Time

### (3) Allowable Soldering Temperature and Time

- Solder within the temperature and time combinations, indicated by the slanted lines in the following graphs.
- Excessive soldering conditions may cause dissolution of metallization or deterioration of solder-wetting on the external electrode.
- In the case of repeated soldering, the accumulated soldering time should be within the range shown in the figures below. (For example, Reflow peak temperature: 260°C, twice → The accumulated soldering time at 260°C is within 30sec.)

Allowable Reflow Soldering Temp. and Time

### (4) Recommendable Temperature Profile for Soldering

- Insufficient preheating may cause a crack on the ceramic body. The difference between preheating temperature and maximum temperature in the profile should be 100°C.
- Rapid cooling by dipping in solvent or by other means is not recommended.

Flow Soldering Conditions

Preheating: 150±10°C, 1-2 minutes.  
Soldering: 250°C, 3 sec.

\* In the case of repeated soldering, the accumulated soldering time should be within the range shown in "(3) Allowable Soldering Temperature and Time."

Reflow Soldering Conditions

Preheating: 150±10°C, 1-2 minutes.  
Soldering: 250°C, 20 sec.

\* In the case of repeated soldering, the accumulated soldering time should be within the range shown in "(3) Allowable Soldering Temperature and Time."

- There may be a risk of unexpected failures (tombstone, insufficient solder-wetting, etc.) in the mounting process caused by mounting conditions. Please make sure that this product is correctly mounted under the specified mounting conditions.

## ⚠Caution/Notice

### ■ Notice (Handling)

#### PTGL Series

1. Do not apply an excessive force to the lead.  
Otherwise, it may cause the junction between lead and element to break, or may crack the element.  
Therefore, holding the element side lead wire is recommended when lead wire is bent or cut.
2. This product does not have waterproof construction.  
Splashed water may cause failure mode such as decline of characteristics or current leak.
3. When this product is operated, the temperature of some areas may be over 100 to 160 degrees C. Be sure that surrounding parts and inserting material can withstand the temperature. If the surrounding part and material are kept under such conditions, they may deteriorate or produce harmful gas (Chlorine gas, Hydrogen sulfide gas, Ammonia gas, Sulfuric acid gas, Nitric oxide gas, etc.), and such harmful gas may deteriorate the element.

### ■ Notice (Handling)

#### PTFL/PTFM Series

1. Do not apply an excessive force to the lead.  
Otherwise, it may cause the junction between lead and element to break, or may crack the element.  
Therefore, holding the element side lead wire is recommended when lead wire is bent or cut.
2. This product does not have waterproof construction.  
Splashed water may cause failure mode such as decline of characteristics or current leak.

### ■ Notice (Handling)

#### PRG/PRF Series

1. When this product is operated, the temperature of some area may be over 100 to 150 degrees C. Be sure that surrounding parts and inserting material can withstand the temperature. If the surrounding parts and material are kept under such conditions, they may deteriorate or produce harmful gas (Chlorine gas, Hydrogen sulfide gas, Ammonia gas, Sulfuric acid gas, Nitric oxide gas, etc.), and such harmful gas may deteriorate the element.
2. Do not assemble this product with air-sealing or resin casting. Such sealing may deteriorate element.

### ■ Narrow Current Band 30 - 140V Series / 16 - 80V Series / Inrush Current Suppression Taping Dimensions

Item	Code	Dimensions (mm)	Note
Pitch of Component	P	12.7	Tolerance is determined by ΔS.
Pitch of Sprocket Hole	P <sub>0</sub>	12.7±0.3	
Lead Spacing	F	5.0 <sup>+0.8</sup> <sub>-0.3</sub>	
Length from Hole Center to Lead	P <sub>1</sub>	3.85±0.8	
Length from Hole Center to Component Center	P <sub>2</sub>	6.35±1.3	Deviation in the feeding direction
Body Diameter	D	Please see in Ratings	
Body Thickness	T	Please see in Ratings	
Deviation along Tape, Left or Right Defect	ΔS	±1.5	Including the inclination caused by lead bending
Carrier Tape Width	W	18.0±0.5	
Position of Sprocket Hole	W <sub>1</sub>	9.0 <sup>+0.5</sup> <sub>-0.75</sub>	Deviation of tape width
Lead Distance between Reference and Bottom Planes	H <sub>0</sub>	16.0±1.0	
	H <sub>2</sub>	6.0 max.	
Protrusion Length	I	+0.5 to -1.0	
Diameter of Sprocket Hole	D <sub>0</sub>	4.0±0.2	
Lead Diameter	d	Please see in Ratings	
Total Tape Thickness	t <sub>1</sub>	0.6±0.3	
Total Thickness of Tape and Lead Wire	t <sub>2</sub>	2.0 max.	
Deviation across Tape	Δh <sub>1</sub> , Δh <sub>2</sub>	1.5 max.	
Portion to cut in Case of Defect	L	11.0 <sup>+0</sup> <sub>-2.0</sub>	
Hold down Tape Width	W <sub>0</sub>	11.0 min.	
Hold down Tape Position	W <sub>2</sub>	4.0 max.	
Coating Extension on Lead	e	Up to the center of crimp

## Lead Type PTGL/PTF Series Package

Continued from the preceding page.

### ■ 125/250/265V Series Taping Dimensions

Item	Code	Dimensions (mm)	Note
Pitch of Component	P	12.7	Tolerance is determined by $\Delta S$ .
Pitch of Sprocket Hole	P <sub>0</sub>	12.7±0.3	
Lead Spacing	F	5.0 <sup>+0.8</sup> <sub>-0.3</sub>	
Length from Hole Center to Lead	P <sub>1</sub>	3.85±0.8	
Length from Hole Center to Component Center	P <sub>2</sub>	6.35±1.3	Deviation in the feeding direction
Body Diameter	D	Please see Ratings	
Body Thickness	T	Please see Ratings	
Deviation along Tape, Left or Right	$\Delta S$	±1.5	Including the inclination caused by lead bending.
Carrier Tape Width	W	18.0±0.5	
Position of Sprocket Hole	W <sub>1</sub>	9.0 <sup>+0.5</sup> <sub>-0.75</sub>	Deviation of tape width.
Lead Distance between Reference and Bottom Planes	H <sub>0</sub>	16.0±1.0	
	H <sub>2</sub>	6.0 max.	
Protrusion Length	L	+0.5 to -1.0	
Diameter of Sprocket Hole	D <sub>0</sub>	4.0±0.2	
Lead Diameter	d	0.6±0.05	
Total Tape Thickness	t <sub>1</sub>	0.6±0.3	
Total Thickness of Tape and Lead Wire	t <sub>2</sub>	2.0 max.	
Deviation across Tape	$\Delta h_1, \Delta h_2$	1.5 max.	
Portion to cut in Case of Defect	L	11.0 <sup>+0</sup> <sub>-2.0</sub>	
Hold down Tape Width	W <sub>0</sub>	11.0 min.	
Hold down Tape Position	W <sub>2</sub>	4.0 max.	
Coating Extension on Lead	e	Up to the center of crimp	

⚠Note:

1. Export Control

<For customers outside Japan>

No Murata products should be used or sold, through any channels, for use in the design, development, production, utilization, maintenance or operation of, or otherwise contribution to (1) any weapons (Weapons of Mass Destruction [nuclear, chemical or biological weapons or missiles] or conventional weapons) or (2) goods or systems specially designed or intended for military end-use or utilization by military end-users.

<For customers in Japan>

For products which are controlled items subject to the "Foreign Exchange and Foreign Trade Law" of Japan, the export license specified by the law is required for export.

2. Please contact our sales representatives or product engineers before using the products in this catalog for the applications listed below, which require especially high reliability for the prevention of defects which might directly damage a third party's life, body or property, or when one of our products is intended for use in applications other than those specified in this catalog.

- |                             |  |
|-----------------------------|--|
| ① Aircraft equipment        | ② Aerospace equipment  |
| ③ Undersea equipment        | ④ Power plant equipment  |
| ⑤ Medical equipment         | ⑥ Transportation equipment (vehicles, trains, ships, etc.)   |
| ⑦ Traffic signal equipment  | ⑧ Disaster prevention / crime prevention equipment   |
| ⑨ Data-processing equipment | ⑩ Application of similar complexity and/or reliability requirements to the applications listed above |

3. Product specifications in this catalog are as of November 2013. They are subject to change or our products in it may be discontinued without advance notice.

Please check with our sales representatives or product engineers before ordering. If there are any questions, please contact our sales representatives or product engineers.

4. Please read rating and ⚠CAUTION (for storage, operating, rating, soldering, mounting and handling) in this catalog to prevent smoking and/or burning, etc.

5. This catalog has only typical specifications. Therefore, please approve our product specifications or transact the approval sheet for product specifications before ordering.

6. Please note that unless otherwise specified, we shall assume no responsibility whatsoever for any conflict or dispute that may occur in connection with the effect of our and/or a third party's intellectual property rights and other related rights in consideration of your use of our products and/or information described or contained in our catalogs. In this connection, no representation shall be made to the effect that any third parties are authorized to use the rights mentioned above under licenses without our consent.

7. No ozone depleting substances (ODS) under the Montreal Protocol are used in our manufacturing process.
