

Full Duplex RS-485 Transceivers

FEATURES

- +5V Only
- Low Power BiCMOS
- Driver/Receiver Enable (SP1491E)
- RS-485 and RS-422 Drivers/Receivers
- Pin Compatible with SN75179 (SP1490E)
- Pin Compatible with SN75180 (SP1491E)
- Improved ESD Specifications
 ±15kV Human Body Model
 ±15kV IEC1000-4-2 Air Discharge
 ±8kV IEC1000-4-2 Contact Discharge

APPLICATIONS

- Industrial Networks
- Telecom
- Motor Control
- HVAC/ Building Control

DESCRIPTION

The **SP1490E** is a low power differential line driver/receiver meeting RS-485 and RS-422 standards up to 20Mbps. The **SP1491E** is identical to the **SP1490E** with the addition of driver and receiver tri-state enable lines. Both products feature ±200mV receiver input sensitivity, over wide common mode range. The **SP1490E** is available in 8-pin plastic DIP and 8-pin NSOIC packages for operation over the commercial and industrial temperature ranges. The **SP1491E** is available in 14-pin DIP and 14-pin NSOIC packages for operation over the commercial and industrial temperature ranges.

ABSOLUTE MAXIMUM RATINGS

These are stress ratings only and functional operation of the device at these ratings or any other above those indicated in the operation sections of the specifications below is not implied. Exposure to absolute maximum rating conditions for extended periods of time may affect reliability.

V_{CC}	+7V
Input Voltages	
Drivers.....	-0.5V to (V_{CC} +0.5V)
Receivers.....	±14V
Output Voltages	
Drivers.....	±14V
Receivers.....	-0.5V to (V_{CC} +0.5V)
Storage Temperature.....	
Power Dissipation.....	1000mW

ELECTRICAL CHARACTERISTICS

The **SP1490E** and **SP1491E** are full-duplex differential transceivers that meet the requirements of RS-485 and RS-422. Fabricated with a **Sipex** proprietary BiCMOS process, both products require a fraction of the power of older bipolar designs.

The RS-485 standard is ideal for multi-drop applications or for long-distance interfaces. RS-485 allows up to 32 drivers and 32 receivers to be connected to a data bus, making it an ideal choice for multi-drop applications. Since the cabling can be as long as 4,000 feet, RS-485 transceivers are equipped with a wide (-7V to +12V) common mode range to accommodate ground potential differences. Because RS-485 is a differential interface, data is virtually immune to noise in the transmission line.

Driver...

The drivers for both the **SP1490E** and **SP1491E** have differential outputs. The typical voltage output swing with no load will be 0 volts to +5 volts. With worst case loading of 54Ω across the differential outputs, the driver can maintain greater than 1.5V voltage levels.

INPUTS		OUTPUTS	
DE SP1491E only	DI	Y	Z
1	1	1	0
1	0	0	1
0	x	z	z

Transmit Function Truth Table

The driver of the **SP1491E** has a driver enable control line which is active high. A logic high on DE (pin 4) of the **SP1491E** will enable the differential driver outputs. A logic low on DE (pin 4) of the **SP1491E** will tri-state the driver outputs. The **SP1490E** does not have a driver enable.

Receiver...

The receivers for both the **SP1490E** and **SP1491E** have differential inputs with an input sensitivity as low as $\pm 200\text{mV}$. Input impedance of the receivers is typically $15\text{K}\Omega$ ($12\text{K}\Omega$ minimum). A wide common mode range of -7V to +12V allows for large ground potential differences between systems. The receivers for both the **SP1490E** and **SP1491E** are equipped with the fail-safe feature. Fail-safe guarantees that the receiver output will be in a high state when the input is left unconnected and floating.

The receiver of the **SP1491E** has a receiver enable control line which is active low. A logic low on REB (pin 3) of the **SP1491E** will enable the differential receiver. A logic high on REB (pin 3) of the **SP1491E** will tri-state the receiver.

INPUTS		OUTPUTS
