

Series 92

Clear, unambiguous and intuitive.

<https://eao.com/>

92 Information about the Series

Key advantages

- Mounted on PCBs
- Intuitive to use
- Bright illumination

Typical application areas

- Audio / video
- Measurement technology
- Medical engineering

Functions

- Pushbutton
- Illuminated pushbutton
- Indicator

Design

- Raised

IP front protection

- IP40
- IP67

Raitings

- 42 VAC (100 mA)

Mounting cut-outs

- Ø 16 mm

Terminal

- PCB

Lens Material

- Plastic

Markings

- Engraving
- Laser marking
- Hot stamping

Conformities

- CE
- 2014/35/EU (LVD)
- 2011/65/EU (RoHS)

Mechanical characteristics

Tightening torque
Fixing screw mounting flange 0.4 Nm
Fixing nut max. 0.5 Nm

Actuating force
2.7 N ± 1 N measured at the switching element
5 N measured at the lens

Actuating travel
Switching element approx. 0.4 mm

Resistance to heat of soldering
Please see application guidelines

Mechanical lifetime
≥ 1 Million cycles of operation as per IEC 60512-5-9a

Electrical characteristics

Electrical life
500 000 cycles of operation at 42 VDC, 50 mA as per IEC 60512-5-9c.

Electrostatic discharge (ESD)
15 kV

Switching voltage and switching current
Switching voltage min. 50 mV AC/DC
max. 42 V AC/DC
Switching current min. 10 µA AC/DC
max. 100 mA AC/DC
Power rating max. 2 W

Electric strength
500 VAC, 50 Hz, 1 minute, as per IEC 60512-2-4a

Ambient conditions

Storage temperature
−40 °C ... +80 °C

Operating temperature
−25 °C ... +70 °C

Protection
IP40 switching element (fluxproof to DIN 41640 Part 84)
IP67 or IP40 frontside

Shock resistance
(semi-sinusoidal)
Max. 500 m/s², pulse width 11 ms, 3-axis,
as per EN IEC 60068-2-27

Vibration resistance
(sinusoidal)
Max. 100 m/s² at 10 Hz ... 500 Hz, 10 cycles, 3-axis,
as per EN IEC 60068-2-6

Approvals

Conformities
CE
2014/35/EU (LVD)
2011/65/EG (RoHS)

General notes

If desired, the actuators of the series 92 can be supplied ready marked. With your order please enclose a list of the desired markings or a drawing, showing the type or size of script or the symbols desired.

1. Engraving (Fig. 1)

With laser marking, the font or symbol is applied directly to the lens applied.

2. Hot stamping (Fig. 1)

For larger series it is worth considering markings by means of hot stamping. We will pleased to advise you.

3. Film inserts (Fig. 2)

Instead of using engraving, the actuator can be fitted with transparent film inserts. However, for this purpose the use of transparent lens caps is recommended. If smoked lens caps are used the lettering does not become visible until the LED is alight. Max. size of film insert 11.4 x 11.4 mm for IP 40 10.4 x 10.4 mm for IP 67 Film thickness 0.2 mm.

All dimensions in mm

Fig. 2

Suppressor circuits

When switching inductive loads such as relays, DC motors, and DC solenoids, it is always important to absorb surges (e.g. with a diode) to protect the contacts. When these inductive loads are switched off, a counter emf can severely damage switch contacts and greatly shorten lifetime.

Fig. 1 shows an inductive load with a free-wheeling diode connected in parallel. This free-wheeling diode provides a path for the inductor current to flow when the current is interrupted by the switch. Without this free-wheeling diode, the voltage across the coil will be limited only by dielectric breakdown voltages of the circuit or parasitic elements of the coil. This voltage can be kilo-

volts in amplitude even when nominal circuit voltages are low (e.g. 12 VDC) see Fig. 2.

The free-wheeling diode should be chosen so that the reverse breakdown voltage is greater than the voltage driving the inductive load. The DC blocking voltage (V_R) of the free-wheeling diode can be found in the datasheet of a diode. The forward current should be equal or greater than the maximum current flowing through the load.

To get an efficient protection, the free-wheeling diode must be connected as close as possible to the inductive load!

Switching with inductive load
Fig. 1

Counter EMF
over load without free-wheeling diode
Fig. 2

**Note for soldering**

Process parameter for wave soldering

Basic specification for wave soldering J-STD 75 W4C.

Maximum temperature on the component side (Temp 2):
(Temperature must not exceed during the entire processing)

120 °C

Preheating phase ($t_1 \dots t_2$):

70 ... 120 sec

Ramp up:

typ. + 1 °C/sec

Ramp up to maximum temperature ($t_2 \dots t_3$):

not defined

Maximum temperature on the soldering side (Temp 3):

250 °C

Maximum time of soldering process ($t_3 \dots t_4$):

3 sec

Ramp down at 170 °C:

typ. - 2 °C/sec

92 Application guidelines

Temperature curve wave soldering

Green curve: Temperature on the component side of the pcb
Red curve: Temperature on the soldering side of the pcb

Room temperature: Temp 1

Preheating: Temperature process = Temp 1 ... Temp 2
Process time = t1 ... t2

Ramp up to soldering temperature: Process time = t2 ... t3

Soldering phase: Temperature process = Temp 3
Process time = t3 ... t4

Iron soldering

Basic specification for iron soldering IEC 60068-2-20

Maximum temperature at tip of iron: 320 °C

Maximum soldering time: 3 sec

Cleaning/Lacquering

The switching elements are not sealed. Cleaning up the PCB may damage the contacts in the switching elements. For this reason, the following points should be noted:

- When soldering make sure that the flux does not pass on the upper side of the PCB.
- When cleaning the PCB with detergents ensure that no dust or other debris may get inside of the switching elements.
- Ensure that no lacquer penetrates into the interior of the switching element when lacquering the PCB.

Storage of components

To obtain the optimum solderability of the components, the following points should be noted during storage:

- Do not store components in locations with high temperature or humidity.
- Do not expose components to corrosive gases.
- Avoid direct sunlight for a long period.

Arrangement mounting flange for switching- and illumination element, PCB mounting

The arrangement of the mounting flanges and their number is determined by the size of the front panel or PCB. To ensure uniform, tactile switching, we recommend a layout of the flanges as per adjacent sketch.

For large PCBs with several switching elements we recommend the following procedure:

1. Fit the actuator to the front panel.
2. Clip the mounting flange to the rear of the intended actuator.
3. Screw the PCB with the components soldered to it to the assembled mounting flange.

This arrangement applies to PCBs 1.6 mm thick.

Dismantling mounting flange

The tool Part No. 92-971.0 must be used for removing the mounting flange from the actuator. Before removing the flange, the PCB fixing screws must be loosened.

If the number of actuators is insufficient, use the spacer Part. No. 92-965.0 which can be attached to the front panel.

The spacer can be adjusted to the following front panel thicknesses: 1.5/2/2.2/3/3.5/4 mm and can be stuck to the back of the panel free of dirt and grease.
