OCTAL BUS TRANSCEIVER
TC74HC245AP / AF / AFW 3－STATE, NON－INVERTING
TC74HC640AP / AF 3－STATE, INVERTING

The TC74AC245, 640A are high speed CMOS OCTAL BUS TRANSCEIVERs fabricated with silicon gate C²MOS technology.
They achieve the high speed operation similar to equivalent LSTTL while maintaining the CMOS low power dissipation.
They are intended for two - way asynchronous communication between data busses. The direction of data transmission is determined by the level of the DIR input.
The enable input ($\overline{G}$) can be used to disable the device so that the busses are effectively isolated.
All inputs are equipped with protection circuits against static discharge or transient excess voltage.

APPLICATION NOTES

1) Do not apply a signal to any bus terminal when it is in the output mode. Damage may result.
2) All floating (high impedance) bus terminals must have their input levels fixed by means of pull up or pull down resistors or bus terminator IC's such as the TOSHIBA TC40117BP.
