

2 OUTPUT PCIE GEN1/2/3 SYNTHESIZER

5V41235

Recommended Applications

2 Output synthesizer for PCIe Gen1/2/3 and Ethernet

General Description

The 5V41235 is a PCIe Gen2/3 compliant spread spectrum capable clock generator. The device has 2 differential HCSL outputs and can be used in communication or embedded systems to substantially reduce electro-magnetic interference (EMI). The spread amount and output frequency are selectable via select pins. The 5V41235 can also supply 25 MHz, 125 MHz and 200 MHz outputs for applications such as Ethernet.

Output Features

- 2 - 0.7V current mode differential HCSL output pairs

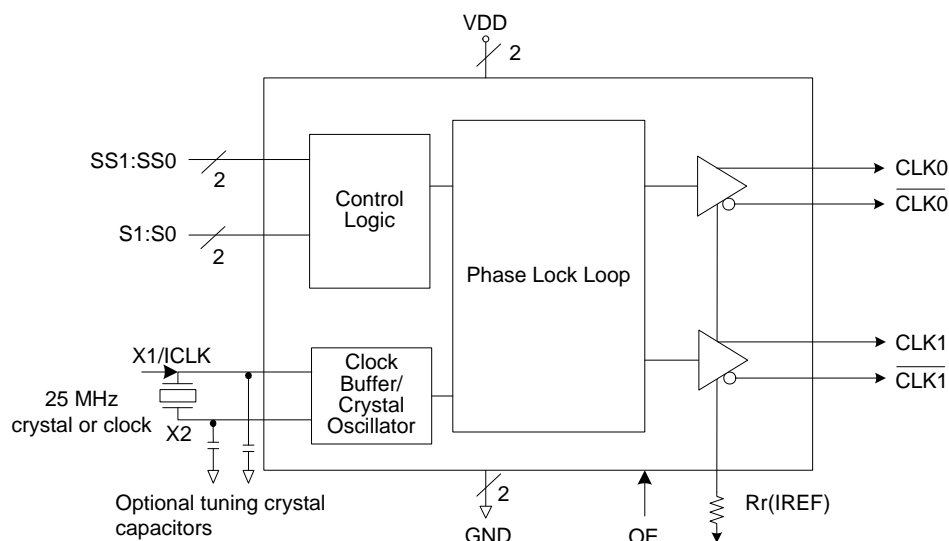

Features/Benefits

- 16-pin TSSOP and QFN packages; small board footprint
- Spread-spectrum capable; reduces EMI
- Outputs can be terminated to LVDS; can drive a wider variety of devices
- TSSOP package: 25MHz, 100MHz, 125MHz and 200MHz output frequencies.
- QFN package: 100MHz and 200MHz output frequencies.
- OE control pin; greater system power management
- Spread% and frequency pin selection; no software required to configure device
- Industrial temperature range available; supports demanding embedded applications

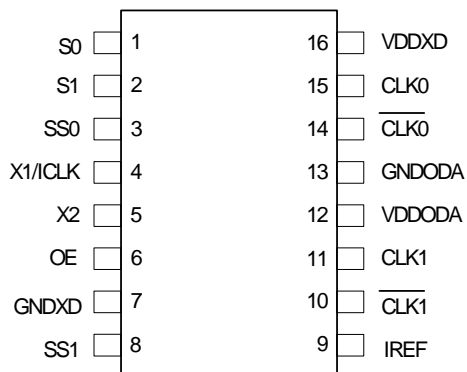

Key Specifications

- Cycle-to-cycle jitter < 100 ps
- Output-to-output skew < 50 ps
- PCIe Gen2 phase jitter < 3.0ps RMS
- PCIe Gen3 phase jitter <1.0ps RMS

Applications Information

External Components

A minimum number of external components are required for proper operation.

Decoupling Capacitors

Decoupling capacitors of 0.01 μF should be connected between each VDD pin and the ground plane, as close to the VDD pin as possible. Do not share ground vias between components. Route power from power source through the capacitor pad and then into ICS pin.

Crystal

A 25 MHz fundamental mode parallel resonant crystal should be used. This crystal must have less than 300 ppm of error across temperature in order for the 5V41235 to meet PCI Express specifications.

Crystal Capacitors

Crystal capacitors are connected from pins X1 to ground and X2 to ground to optimize the accuracy of the output frequency.

C_L = Crystal's load capacitance in pF

Crystal Capacitors (pF) = $(C_L - 7) * 2$

For example, for a crystal with a 8pF load cap, each external crystal cap would be 2pF $[(8-7)*2=2]$.

Current Source (Iref) Reference Resistor - R_R

If board target trace impedance (Z) is 50 Ω , then $R_R = 475\Omega$ (1%), providing IREF of 2.32 mA. The output current (I_{OH}) is equal to 6*IREF.

Output Termination

The PCI-Express differential clock outputs of the 5V41235 are open source drivers and require an external series resistor and a resistor to ground. These resistor values and their allowable locations are shown in detail in the **PCI-Express Layout Guidelines** section.

The 5V41235 can also be configured for LVDS compatible voltage levels. See the **LVDS Compatible Layout Guidelines** section.

Output Structures

General PCB Layout Recommendations

For optimum device performance and lowest output phase noise, the following guidelines should be observed.

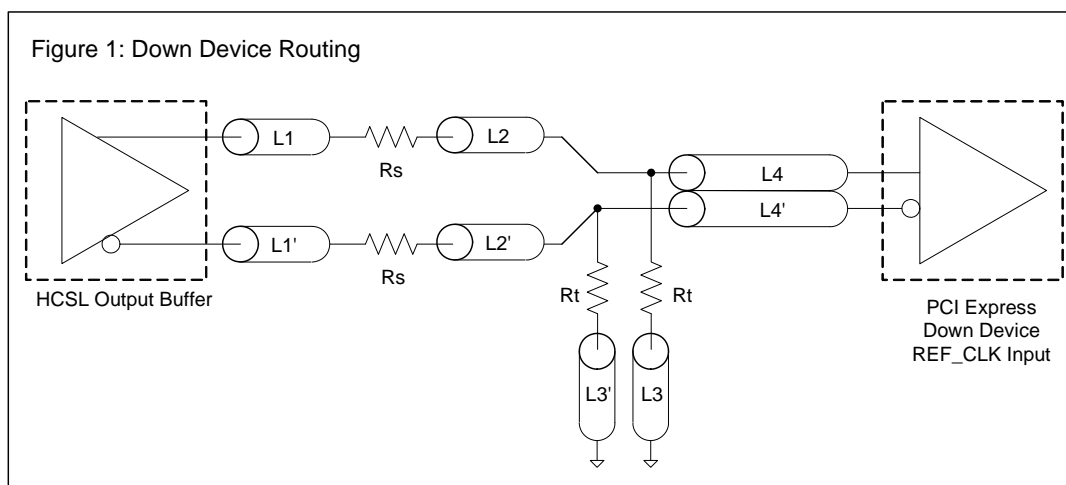

1. Each 0.01 μF decoupling capacitor should be mounted on the component side of the board as close to the VDD pin as possible.
2. No vias should be used between decoupling capacitor and VDD pin.
3. The PCB trace to VDD pin should be kept as short as possible, as should the PCB trace to the ground via. Distance of the ferrite bead and bulk decoupling from the device is less critical.
4. An optimum layout is one with all components on the same side of the board, minimizing vias through other signal layers (any ferrite beads and bulk decoupling capacitors can be mounted on the back). Other signal traces should be routed away from the 5V41235. This includes signal traces just underneath the device, or on layers adjacent to the ground plane layer used by the device.

Layout Guidelines

Absolute Maximum Ratings

Stresses above the ratings listed below can cause permanent damage to the 5V41235. These ratings are stress ratings only. Functional operation of the device at these or any other conditions above those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods can affect product reliability. Electrical parameters are guaranteed only over the recommended operating temperature range.

Revision History

| Rev. | Originator | Date | Description of Change |
|------|------------|----------|--|
| A | RDW | 11/02/11 | Initial release. |
| B | RDW | 11/22/11 | 1. Changed title to “2 Output PCIe GEN1/2/3 Synthesizer” 2. Updated Differential Phase Jitter table. |
| C | RDW | 06/06/12 | 1. Updated Features bullet(s) from: “• 25 MHz, 125 MHz and 200 MHz output frequencies; supports Ethernet applications”, to: “• 25 MHz, 100MHz, 125 MHz and 200 MHz output frequencies; TSSOP-only • 100MHz output frequency; MLF package”. 2. Added table 3, Output/Spread Select table for MLF only |
| D | S. Sharma | 10/16/12 | 1. Updated and expanded Output Select table per char review. 2. Changed crystal capacitance load spec from 16pF to 8pF. |
| E | IH | 09/09/15 | Corrected typo in Ordering information; NLG and NLGI shipping packaging changed from “Tray” to “Tubes”. |
| F | IH | 07/08/16 | Updated marking diagrams for TSSOP devices. |
| G | RDW | 10/11/16 | 1. Updated Features bullets for package output frequencies. 2. Changed all MLF references to QFN. |
| H | B.Shen | 01/12/17 | Updated 16QFN POD drawing to latest showing chamfered epad. |
| J | C.P. | 05/05/17 | Updated PGG16 package outline drawing to latest version. |
