

Fluke 700-IV Current Shunt

Product Home

Description:

- Conversion factor: $10 \text{ mV} = 1 \text{ mA}$
Accuracy (% of input, 1 year): 0.025%
- Input current: 0 to 55 mA
- Input resistance: 250Ω , nominal
- Output resistance: 10Ω , nominal
Accuracy specification applies from $+18^{\circ}\text{C}$ and $28-50^{\circ}\text{C}$
- Maximum input voltage: 30V dc

Application: Use the Fluke 700-IV Current Shunt to calibrate and troubleshoot mA/mA devices. On a 741 or 743 Documenting Process Calibrator, Source mA and Measure V dc. The custom units function of the calibrator automatically provides the correct conversion, and directly displays/captures the current in mA.

Included: Shunt, instruction sheet.

Warranty: One year
