

TM-210 Support Brace Spring Lifting

Characteristic

Its main material is high grade stainless steel, SUS 304, and it has an elegant appearance having convenient to use flap type brace. Its main body is made with square pipe and it is finished with hairline treatment. Nylon made black cap puts proper accent with its body taste. Opening and closing can be made light and smooth with its spring mechanism. No catch shall be needed by using it as shown in application example. Since its body, upper and lower brackets can be used for both left side fixing and right side fixing, handling and storing are easy to be done.

Application

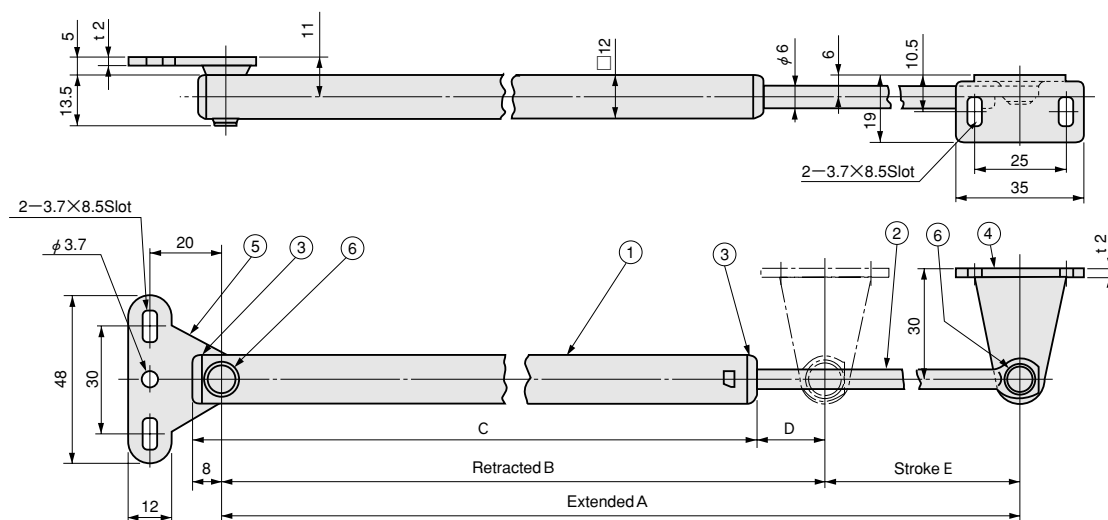

Office automation appliances / Office utilities

Specification

Model No.	A	B	C	D	E	Brace Reaction Force N(kgf)		Net Weight(g)	Code No.
						Extended	Retracted
