

LIGHT LED M08 CoB Product Series

1. Description

The LiteON CoB Product series is a revolutionary, energy efficient and ultra-compact new light source, combining the lifetime and reliability advantages of Light Emitting Diodes with the brightness of conventional lighting. It gives you total design freedom and unmatched brightness, creating a new opportunities for solid state lighting to displace conventional lighting technologies.

1.1 Features

- Compact high flux density light source
- Uniform high quality illumination
- Streamlined thermal path
- MacAdam compliant binning structure
More energy efficient than incandescent, halogen and fluorescent lamps
- Instant light with unlimited dimming
- RoHS compliant and Pb free

1.2 Benefits Features

- Enhanced optical control
- Clean white light without pixilation
- Uniform consistent white light
- Significantly reduced thermal resistance and increased operating temperatures
- Lower operating costs
- Reduced maintenance costs

1.3 Naming Rule

Code 2: Package Type/Platform

M08: Metal substrate with 13.5x13.5mm square.

Code 3: Light Emitting Surface

2: 9.5mm excluding dam

Code 4: Product Series

06: 06 Series

10: 10 Series

18: 18 Series

Code5: Emission Color Characteristics

Z: White Color Rendering Index 80 Min.

Q: White Color Rendering Index 90 Min.

Code6: Color Temperature

27: 2700K at 85degC

30: 3000K at 85degC

40: 4000K at 85degC

Note: The Color Temperature follow ANSI C78.377A Doc.

Code7: Hue Bin by MacAdam Ellipses Step

T0: 2700~4000K MacAdam Ellipse / ANSI Bin

2. Outline Dimensions

2.1 Form Factor of M082 series CoB

Notes

1. All dimensions are in millimeters.
2. Tolerance is $\pm 0.3\text{mm}$ unless otherwise noted.

2.2 Internal Equivalent Circuit

Notes

1. LED of equivalent circuit means all series/parallel in CoB package.

Storage Temperature Range	T _{stg}		-40 to 100	°C

Notes

1. The pulse mode condition is 1/10 duty cycle with 100 msec. pulse width.
2. Forbid to be operated at reverse voltage condition.
3. The unit of R_{th} is °C/W electrical.
4. The M08 CoB is recommended soldering temperature under 350degC and could not over 3.5sec.

Notes

1. LiteOn tester and shipping spec follow the color bin with 25degC CCX/CCY center.
2. The Hot/Cold factor means the CCX/CCY shift from 25degC to 85degC.
3. The Hot/Cold shift is measured by LiteOn CAS 140B instrument system.
4. The ellipse equation expression: $SDCM = (g11 \cdot (x-x_0)^2 + 2 \cdot g12 \cdot (x-x_0) \cdot (y-y_0) + g22 \cdot (y-y_0)^2)^{0.5}$

LIGHT LED M08 CoB Product Series

8. Cautions

8.1 An LED is a current-operated device. In order to ensure intensity uniformity on multiple LEDs connected in parallel in an application, it is recommended that a current limiting resistor be incorporated in the drive circuit, in series with each LED as shown in circuit below.

(A) Recommended circuit.

(B) The brightness of each LED might appear different due to the differences in the I-V characteristics of those LEDs.

8.2 Do not put any pressure on the light emitting surface either by finger or any hand tool and do not stack the COB products. Stress or pressure may cause damage to the wires of the LED array.

8.3 This product is not designed for the use under any of the following conditions, please confirm the performance and reliability are well enough if you use it under any of the following conditions

- Do not use sulfur-containing materials in commercial products including the materials such as seals and adhesives that may contain sulfur.
- Do not put this product in a place with a lot of moisture (over 85% relative humidity), dew condensation, briny air, and corrosive gas (Cl, H₂S, NH₃, SO₂, NOX, etc.), exposure to a corrosive environment may affect silver plating.

ESD (Electrostatic Discharge)

Static Electricity or power surge will damage the LED. Suggestions to prevent ESD damage:

- Use of a conductive wrist band or anti-electrostatic glove when handling these LEDs.
- All devices, equipment, and machinery must be properly grounded.
- Work tables, storage racks, etc. should be properly grounded.
- Use ion blower to neutralize the static charge which might have built up on surface of the LED's plastic lens as a result of friction between LEDs during storage and handling.

ESD-damaged LEDs will exhibit abnormal characteristics such as high reverse leakage current, low forward voltage, or "no light up" at low currents.

To verify for ESD damage, check for "light up" and V_F of the suspect LEDs at low currents.
