NOTE 1: Unless otherwise specified AC output is measured at the output pin.

NOTE 2: The algebraic convention, whereby the most negative value is a minimum and the most positive is a maximum, is used in this table. Negative current shall be defined as conventional current flow out of a device terminal.

NOTE 3: fc is the frequency where the gain is -3dB with respect to the input signal. f_{CLK}=100kHz, DIVIDER RATIO pin at V₊, C_L=0.01μF and R_L=25.78kΩ.

NOTE 4: The external or driven clock frequency is divided by either 1, 2, or 4 depending upon the voltage at the DIVIDER RATIO pin. When the DIVIDER RATIO pin=V₊, the ratio=1; when the DIVIDER RATIO pin = GND, the ratio=2; when the DIVIDER RATIO pin =V₋, the ratio = 4.
