

Low-torque Basic Switch

D2MC

Highly Reliable Rotary-action Switch for Low Torque Operation

- 0.5 A rated model (D2MC-01□) employs crossbar alloy #1 contacts which exhibit unsurpassed contact reliability in very small load ranges.
- High-capacity 5 A Model (D2MC-5□) employs silver contacts.
- Long life (10,000,000 mechanical operations min.) through use of a movable coil spring.

■ Actuator Lever

CAA1M for Snap-on Mounting

In addition to the standard wire lever model shown here, various other levers are available upon request.

Mounting Actuator Lever

1. Insert the end of the actuator lever into the hole in the rotary disc.

2. Push the lever down in the direction of the groove in the rotary disc.

Designing Own Actuator

If you decide to make your own actuator lever, the materials used should be stainless steel, piano wire, hard aluminum wire, etc.

There are no restrictions on the tip shape or length of the actuator lever. However, if the lever is too long, improper switch resetting or contact chattering may occur. Therefore, the shape of lever as shown below is suitable.

The appropriate value of dimension (l) from the fulcrum is 50 mm.

Precautions

Mounting/Soldering

Use M3 mounting screws with plain washers or spring washers to mount the switch. Tighten the screws to a torque of 3 kg • cm (0.29 N • m).

When soldering a lead wire to a terminal of the D2MC, use a soldering iron with a maximum capacity of 60 W and do not take more than 5 s to solder the lead wire, otherwise the characteristics of the D2MC may be altered.

Applying a soldering iron for too long a time or using one that is rated at more than 60 W may degrade the switch characteristics.

Do not change the operating position by modifying the actuator.
