LED level meter driver, 5-point, VU scale

BA6124 / BA6124F

The BA6124 and BA6124F are driver ICs for LED VU level meters in stereo equipment and other display applications. The ICs display the input level (range: −10dB to +6dB) on a 5-point, bar-type LED display.
The circuit includes a rectifier amplifier allowing direct AC input, and has constant-current outputs, so it can directly drive the LEDs without variations in LED current due to power supply voltage fluctuations.

●Applications

VU meters, signal meters, and other display devices.

●Features

1) Rectifier amplifier allows either AC or DC input.
2) Constant-current outputs for constant LED current when the power supply voitage fluctuates.
3) Built-in reference voltage means that power supply voltage fluctuations do not effect the display.
4) Wide operating power supply voltage range (3.5V to 16V) for a wide range of applications.
5) Low PCB space requirements. Comes in a compact package and requires few external components.
