

LF SERIES FUSE BLOCK TECHNICAL BROCHURE

Littelfuse®

Expertise Applied | Answers Delivered

Now Available!
Full Line of Fuse Blocks
and Covers

**Smaller Footprint
Provides Space Savings**

**DIN-Rail Mounting
Eases Installation**

**Indication Improves
Functionality**

An Indication of Value

Littelfuse understands the challenge of constantly improving OEM products—that's why we developed a brand new line of next-generation fuse blocks.

The LF Series fuse blocks. Smaller. More efficient. More valuable to the user. These products meet design and business objectives, provide value and differentiate OEM products from the competition.

LF SERIES CLASS J FUSE BLOCKS

600 V

Description

The Littelfuse 600 V Class J blocks offer generous space savings and enhanced value over previous generations, such as indication, snap-to-release DIN rail mounting and universal mounting holes.

Features/Benefits

- Space-saving design—up to 45% smaller than existing blocks
- Universal mounting holes for easy replacement
- Indication offered on all versions except 200–600 A
- One hand release from DIN rail for ferrule style fuses
- Reinforced fuse clips are standard on all Class J blocks
- Covers available for 100 A and lower to enhance safety

Specifications

Voltage Ratings:	600 V
Ampere Ratings:	0 – 600 A
Leakage Current:	<0.6 mA at 600 V
Flammability Rating:	UL94 V-0
Approvals:	UL Listed: File No. E14721 CSA Certified: File No. LR7316
Environmental:	RoHS Compliant, Lead (Pb) Free

Recommended Fuses

Time Delay
 Series: JTD_ID
 Series: JTD

Fast Acting
 Series: JLS

LF SERIES CLASS H/K5 AND R FUSE BLOCKS

Description

The Littelfuse Class H/K5 and R blocks offer many benefits such as indication, snap-to-release DIN rail mounting and universal mounting holes. Class H and Class R fuse blocks are dimensionally the same, but Class R blocks incorporate a rejection feature, which only allows Class R fuses to be inserted.

Features/Benefits

- Universal mounting holes for easy replacement
- Indication offered on most 250 V and 600 V versions
- One hand release from DIN rail for ferrule style fuses
- Reinforced fuse clips are standard on all Class H and Class R fuse blocks
- Covers available for 100 A and lower to enhance safety

Specifications

Voltage Rating:	250 V, 600 V

LF SERIES CLASS T FUSE BLOCKS

Description

The Littelfuse Class T fuse blocks offer many advantages such as space saving design, universal mounting holes, snap-to-release DIN rail mounts and available covers.

Features/Benefits

- Space-saving design
- Universal mounting holes for easy replacement
- One hand release from DIN rail for 30–60 A fuses
- Reinforced fuse clips are standard
- Covers available for most amperages to enhance safety

Specifications

Voltage Ratings:	300 VAC/600 VAC
Ampere Ratings:	0 – 600 A
Leakage Current:	<0.6 mA at 600 V
Withstand Rating:	200 kA RMS SYM
Flammability Rating:	UL94 V-0
Approvals:	UL Listed (File No. E14721) CSA Certified (File No. LR7316) RoHS Compliant, Lead (Pb) Free
Environmental:	

Recommended Fuses

300 V: JLLN

600 V: JLLS

LF SERIES CLASS G FUSE BLOCKS

Description

All Littelfuse Class G fuse blocks offer snap-to-release DIN rail mounting and universal mounting holes. Class G fuse blocks are designed for use with time-delay current limiting Class G fuses.

Features/Benefits

- Universal mounting holes for easy replacement
- One hand release from DIN rail for most amperages
- Meet requirements for branch circuit protection

Specifications

Voltage Ratings:	600 VAC (0–20 A) 480 VAC (25–60 A)

LF SERIES CLASS CC/CD AND MIDGET (10X38 mm) FUSE BLOCKS

600 V

Description

The Littelfuse Class CC, CD and midget blocks offer generous space savings and enhanced value. DIN rail mounting and universal mounting holes are all available. Indication feature on all Class CD fuse blocks.

Features/Benefits

- Space-saving design
- Universal mounting holes for easy replacement
- Indication offered on CD blocks
- One hand release from DIN rail optional
- Rejection feature that prevents the insertion of fuses with lower interrupting rating or voltage ratings
- Clip design reduces resistance and heat
- Non DIN Rail fuse blocks have interlocking feature allowing ganging to produce a fuse block with any number of poles
- Covers available for all amperages to enhance safety

Specifications

Voltage Rating:	600 VAC/600 VDC
Ampere Ratings:	Class CC: 30 A Class CD: 60 A
Dielectric strength:	1200 V minimum
Clip/terminals:	Tin-plated copper alloy
Box lug:	Copper
Screw and captive pressure plate:	Zinc-plated steel
Base:	Thermoplastic UL94 V-0 flammability rating
Approvals:	Class CC/CD: UL Listed (File No. E14721) Class CD: CSA Certified (File No. LR73091) Class CC: CSA Certified (File No. LR7316) Midget: UL Recognized (File No. E14721)

LF SERIES FUSE BLOCK COVERS

Specifications

Connection:	Snap to fuse body
Molded Base:	Black thermoplastic
Flammability Rating:	UL94 V-0
Approvals:	UL Listed (File No. E184929)
CSA Certified	(File No. 007316_0_000 Class 6225-01)

Features/Benefits

- Added safety to personnel
- Ventilated to avoid fuse derating
- Reusable
- UL listed and CSA certified
- Available for Class H/R, Class J, Class T and Class CD
- Convenient snap-on feature
- Allows visibility of indicator fuse block light

Web Resources

For the most current fuse block information or sample requests, visit

www.littelfuse.com/fuseblocks

Description

Littelfuse fuse block covers protect personnel from accidentally coming into contact with energized parts. Covers are for use with various UL class fuse blocks. Please, review the ordering information for available covers.

† UL Class CD

How does the indicator work on the LF Series fuse blocks?

The indicator is a neon bulb that lights when the fuse opens. When there is no power to the panel, you will not see the indicating light. It is the same functionality of indicating touch-safe blocks. It operates the same electrically as Touch-Safe Littelfuse fuse holders such as the LPSM and LPSJ. Please see the functional schematic below for more details.

LF Series Functional Schematic

What is the leakage current of the indicator?

Leakage current is dependent on the voltage and resistance of the circuit, but a 600 V circuit will typically be less than 1 mA.

At what voltage will the indicator lamp operate?

80-600 VAC

Which will open first if I have both an indicating fuse and fuse block?

The fuse element will open first, followed by the blown fuse indicator on the fuse, followed by the blown fuse indicator on the fuse holder. However, it will all appear instantaneous to the naked eye due to how quickly these things will happen. It is important to note that the holder itself doesn't "open" – the neon bulb on the holder simply indicates an open circuit.

Do indicating holders replace the need for indicating fuses?

No. The indicator light only works when power is on, which greatly helps with troubleshooting. After the circuit is de-energized and locked out, the blown fuse indicator on the fuse will still show the open fuse. The blown fuse indicator is also important for fuses that are not in a holder. This redundancy improves safety.

What reliability tests were performed on these new products?

Fuse block reliability testing:

Insertion Extraction Force, Multiple Insertion Testing, Temperature Testing, Thermal Strength, Mechanical Strength, Short Circuit, Dielectric, Open Fuse Indication, Rejection, Repeated DIN attachment, Forced DIN removal, Mounting Torque, DIN rotation and slide

Indication reliability testing:

Thermal Shock, Thermal Cycling, Humidity and Temperature Conditioning, Multiple Insertions, Contact Cleaner, Indication after Over-torque, Lens Retention

Do you have any field data to share?

Please contact our Tech-Line techline@littelfuse.com or (800) TEC-FUSE

Is the product UL Listed?

Yes, to File No. E14721.
Please see the datasheets for a complete listing of all certifications.
