

Quad high-performance operational amplifier

NE/SE5514

DESCRIPTION

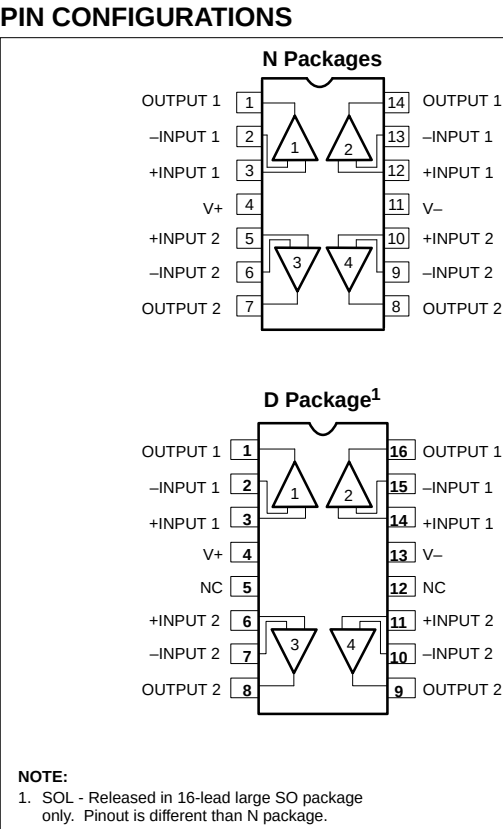

The NE/SE5514 family of quad operational amplifiers sets new standards in bipolar quad amplifier performance. The amplifiers feature low input bias current and low offset voltages. Pinout is identical to LM324/LM348 which facilitates direct product substitution for improved system performance in dual supply applications. Output characteristics are similar to a μ A741 with improved slew and drive capability.
