

FEATURES

- Direct Modulation DFB Laser
- Built-in TEC, Thermistor and Monitor PD
- 14-Pin Butterfly Type Module
- QAM Transmission Application
- 10mW Output Power
- Low Residual Chirp
- Selected wavelengths according to ITU-T grid available

APPLICATIONS

This laser is intended for use in Dense Wavelength Division Multiplexed (DWDM) systems that employ Quadrature Amplitude Modulation (QAM) on Quadrature Phase Shift Keying (QPSK). Transmission spans up to 60 km are possible without amplification.

DESCRIPTION

This Laser is a high power laser capable of QAM transmission. It is packaged in a “butterfly” type module. The module employs a high efficiency optical coupling system, coupling the laser output through a built-in optical isolator into a single mode fiber pigtail. The modules also include a monitor photodiode, a thermoelectric cooler (TEC) and thermistor. This device is designed for DWDM direct modulation transmission systems. Selected wavelengths specified to the ITU-T grid are available.
