

RADIAFLEX

DESCRIPTION

- Metalwork : Mild steel, plated.
- Natural rubber, bonded, cylindrically shaped.
- Welded fixings: 5 styles (single sided threaded stud, single sided threaded hole, double threaded stud, double threaded holes, combination fixing).

In Europe, we often use different screw standards than our french standard.

To better satisfy this need, Paulstra has created a new range TRadiaflex Europe.

This range is available with the 4 usual welded fixings and with a new fixing : **the threaded hole stop**.

CHARACTERISTICS

The design of the RADIAFLEX mount gives the following basic characteristics :

- Radial elasticity greater than axial elasticity.
- The rubber works in :
 - compression (axial).
 - shear (radial).
 - compression/shear according to the fixing method.

Advantages :

- Simple to fix.
- Simple and economical.
- Extensive range :
 - 11 stud diameters.
 - Several heights for each diameter.
 - 5 methods of fixing.

Recommendations :

- Operation in shear is very useful for vibration isolation provided that the radial forces are not too great.

ASSEMBLY

The fixing holes for the Radiaflex mounts should have a chamfer with a depth equal to the pitch of the thread.

Ex. 521401 : M10 x 150 chamfer = 1.5 mm

521951 : M16 x 200 chamfer = 2 mm
