ZXTR2008Z

100V INPUT, 8.2V 30mA REGULATOR TRANSISTOR

Description

The ZXTR2008Z monolithically integrates a transistor, Zener diode and resistor to function as a high voltage linear regulator. The device regulates with an 8.2V nominal output at 15mA. It is designed for use in high voltage applications where standard linear regulators cannot be used. This function is fully integrated into a SOT89 package, minimizing PCB area and reducing number of components when compared with a multi-chip discrete solution.

Pin Functions

Pin Name	Pin Function	Notes
V_{IN}	Input Supply	To maintain output regulation the input voltage can vary from 12V to 100V with respect to the GND pin. It is recommended to connect a 1µF capacitor to GND.
GND	Power Ground	This pin should be tied to the system ground.
V_{OUT}	Voltage Output	Outputs a regulated 8.2V. It is recommended to connect a 10µF capacitor to GND. Minimum of 10µA must be drawn from V_{OUT} to maintain regulation. The pin can be pulled high to a maximum of 14.5V with respect to ground.
