

Kraftform Plus Series 300

Ever worked in a truly ergonomic manner?

Kraftform Plus prevents injuries – even long-term.

Kraftform Plus screwdrivers enable a **higher transfer of force** with **less effort** and relieve the entire hand-arm system – even with **intensive use**. Combined with other technical and practical product advantages such as the **Lasertip** for a secure fit in the screw head, Kraftform screwdrivers are the ideal choice for manual screwdriving jobs.

The basic idea for the prototype of the Kraftform handle – that the **hand** should dictate the **design** – has, right through to today, proved to be correct. In cooperation with the internationally recognised Fraunhofer-Institut, Wera developed a screwdriver handle designed to match the shape of the human hand as long ago as the 1960s. After a long development phase, the Wera Kraftform handle was launched to the market in 1968. It has been optimised through the years with new technologies, but has kept its proven shape. After all, the human hand has not changed either.

The outstanding design of the Kraftform handle that fits perfectly into the hand **prevents hand injuries such as blisters and calluses**.

The hard materials used for the handle ensure **rapid hand repositioning** without any danger of the skin "sticking" to the handle. The surrounding hard zones with large diameters glide like wheels across the hand.

The large contact area – with particularly high friction to the soft zones – results in **high torque transfer without any bruising from the edges**.

The Kraftform handle functions superbly in all application situations, and it really has to. The application environment often does not allow any direct tool access.

Wera Lasertip "bites" itself into the screw head and **prevents any slips out** of the recess. It can be used for slotted, Phillips and Pozidriv® screws.

*) Pozidriv = reg. trademark of European Industrial Service Ltd.

A precisely-focused laser creates a sharp-edged surface structure. This laser treatment results in an edge hardness of up to 1000 HV 0.3.

Wera Lasertip **reduces the contact pressure required** and **enhances force transfer** - meaning less screwdriving effort is required. Screwdriving becomes safer and easier.

The screw symbol and tip size identification markings on the handle **make it easier to find** the right screwdriver in the tool case or at the workplace.

The hexagonal non-roll feature **prevents any rolling away** at the workplace.

The Wera TORX® HF profile (HF = Holding Function) securely holds TORX® screws on the tool tip thanks to its drive geometry and the wedging forces associated with this. Ideal for work in difficult-to-access areas e.g. screw connections in deep blind holes.

The Wera Hex-Plus profile with its improved geometry **prevents damage** to the heads of hexagonal socket screws. A higher torque transfer of up to 20 % is possible. This also makes screwdriving safer and more convenient.

Lasertip

Lasertip is also ideal for **oily and greasy** applications, circumstances that would otherwise favour the slipping out of the tool from the screw.

The screwdriver sets are always supplied with a wall-mountable rack. This ensures **organised storage** and **quick access**. The rack is also available as an individual item.

Kraftform Plus – Series 300

The right tool for every application

335 Slotted screwdriver

Application: Slotted screws

Blade: Round

How to prevent the screwdriver from slipping out of the screw head

It happens time and time again that the tip slips out of the screw head when screwdriving, sometimes damaging valuable surfaces or even causing injury. The tips of the Wera Lasertip screwdrivers are microscopically roughened by means of a laser. This rough surface literally "bites" itself firmly into the screw head. Slipping out becomes a thing of the past.

378 B Slotted screwdriver

Application: Slotted screws

How to avoid bruising and injuries to the hands

Screwdriving by hand can actually be quite painful, particularly during extended use. Wera developed the Kraftform handle with this in mind. Its design fits exactly to the hand, and this ergonomic handle, which perfectly fits the hand, and the materials used combine to prevent blisters, calluses and strain. This is particularly noticeable when changing the position of grip. This makes the concept of ergonomics "graspable".

Why is the Kraftform Plus handle made from several components?

Wera makes its Kraftform handles from several materials with different properties. The core is made from a hardwearing plastic that holds the blade securely even when subjected to great forces. The colour-coded soft zones of the external mantle consist of a softer material with more friction resistance for high torque transfer. The black areas with a harder surface prevent the hand from sticking to the handle enabling you to adjust your grip more quickly.

Kraftform Plus – Series 300

The right tool for every application

345 VSM Slotted screwdriver

How to prevent rounded screw heads with Hex-Plus

Hexagon socket screws are a problem, because the contact surfaces that transfer the force of the tool to the screw are very narrow. The consequence: the head of the screw can be damaged, usually rounding out the recess.

Hex-Plus tools have larger contact surfaces to prevent this, driving from the flats of the recess, rather than the corners. Good to know: Hex-Plus tools fit into every standard hexagon socket screw!

352 Ball end screwdriver for hexagon socket screws

Application: Hexagon socket screws

TORX® ball tip and hexagon ball tip

The spherical drive profile means that it is possible to swivel the axis of the tool to that of the screw, and therefore enable angled, "around-the-corner" screwdriving jobs. This ball tip geometry – often found on L-keys – is now available on a number of Wera bits.

367 TORX® HF screwdriver with holding function

Application: TORX® socket screws

05028056001	TX 40	130	112	7,0	5 3/16"		10

What is the purpose of the TORX® HF profile?

In tight assembly or disassembly situations, for example in engine compartments, it is not possible to securely hold the screw with the hand on the screwdriver, and the screw subsequently often gets lost. Lengthy searches or the loss of the

screw (with the associated danger that could bring about) are the consequence. The TORX® HF tools developed by Wera are ideal because they feature an optimised geometry of the original TORX® profile. The wedging forces resulting from the surface pressure between the drive tip and the screw profile mean that the screw is securely held on the tool!

Kraftform Plus – Series 300

TORX PLUS®

Compared with the "normal" TORX® profile, the elliptical instead of circular profile enlarges the 6 flanks that transfer torque between the tool and the screw. This means that the force applied when screwdriving is spread across a larger surface area. Higher torque is transferred and, in addition, the service life of the screw and tool are lengthened. The so-called centre-lock screws on cutting tools represent a typical use of this type of screw profile. The thermal influences on such holders for carbide insert tips often "bake" the retaining screws so firmly that it is important to have a profile that considerably enhances the loosening torque capability of the screws. For this reason a torque-stable screw profile is necessary to avoid any possible damage to the screw and to exclude the possibility of an otherwise costly machine downtime.

Kraftform Plus – Series 300

The right tool for every application

371 TORQ-SET® Mplus screwdriver

Application: TORQ-SET® screws

Blade: Round

Design: Mplus for higher breaking torque and longer service life, chrome-plated

Handle: Kraftform with non-roll feature, multi-component

Code	mm	mm	mm	mm	mm	mm	
05028130001	6		80	98	4,5	3 1/8"	5
05028132001	8		100	105	6,0	4"	5
05028134001	10		100	105	6,0	4"	5
05028136001	1/4"		125	112	8,0	5"	5

How can I prevent frequent breakages of TORQ-SET® bits?

Wera developed the Mplus profile with stronger flanks compared with tools with a conventional TORQ-SET® profile. This results in approximately 70 % extra torsional strength and greatly extends the service life of Wera Mplus tools.

368 Screwdriver for square socket head screws

Application: Square socket screws

Blade: Round

Design: Chrome-plated, Black Point except for sizes 01+02

How to avoid bruising and injuries to the hands

Screwdriving by hand can actually be quite painful, particularly during extended use. Wera developed the Kraftform handle with this in mind. Its design fits exactly to the hand, and this ergonomic handle, which perfectly fits the hand, and the materials used combine to prevent blisters, calluses and strain. This is particularly noticeable when changing the position of grip. This makes the concept of ergonomics "graspable".

Kraftform Plus – Series 300

The right tool for every application

395 HO Nutdriver

Application: Hexagon headed bolts, screws and nuts

Blade: Round

Design: Hollow shaft for protruding threaded rods, chrome-plated

Handle: Kraftform with non-roll feature, multi-component

TIP: The hollow shaft enables seized screws or those on long threads to be tightened and loosened

Why is the Kraftform Plus handle made out of several components?

Wera produces the Kraftform handle out of several materials with different properties. A resistant plastic is used for the core which ensures that the blade is held securely, even under high strain. A softer material is used for the coloured soft zones, which has a high

frictional resistance and allows the transfer of high forces - thus requiring less screwdriving effort. The black sections with their hard surfaces prevent any "sticking" of the hand to the handle, making rapid repositioning of the hand possible.

367/7 TORX® HF Kraftform Plus screwdriver set with holding function and rack

Application: TORX®

Content: 7-piece set and rack in display carton

Code				
05223161001	367 TORX® HF	1 x TX 8x60; 1 x TX 10x80; 1 x TX 15x80; 1 x TX 20x100; 1 x TX 25x100; 1 x TX 27x115; 1 x TX 30x115	1

367/4 TORX® HF Kraftform Plus screwdriver set with holding function and 300mm-long blades

Application: TORX® with holding function, extra long (300 mm) blade

Content: 4-piece set

Code				
05028074001	367 TORX HF L	1 x TX 20x300; 1 x TX 25x300; 1 x TX 27x300; 1 x TX 30x300	1	

What is the purpose of the TORX® HF profile?

In tight assembly or disassembly situations, for example in engine compartments, it is not possible to securely hold the screw with the hand on the screwdriver, and the screw subsequently often gets lost. Lengthy searches or the loss of the

screw (with the associated danger that could bring about) are the consequence. The TORX® HF tools developed by Wera are ideal because they feature an optimised geometry of the original TORX® profile. The wedging forces resulting from the surface pressure between the drive tip and the screw profile mean that the screw is securely held on the tool!

Kraftform Plus – Series 300

The right tool for every application

367/6 TORX® B0 Kraftform Plus TORX® safety screwdriver set and rack

Application: TORX® screws with safety pin (B0 = with bore hole)

Content: 6-piece set and rack in display carton

Code			
05138250001	367 TORX® B0	1 x TX 10x80; 1 x TX 15x80; 1 x TX 20x100; 1 x TX 25x100; 1 x TX 30x115; 1 x TX 40x130	1

TORX® with borehole

TORX® tools with a borehole prevent the unauthorised unfastening of safety screws. The screws contain a pin that protrudes into the drive profile so that "normal" TORX® tools cannot be used. This pin fits into the borehole of TORX® B0 tools allowing safety screws to be unfastened.
