Description

The HA-5142/44 ultra-low power operational amplifiers provide AC and DC performance characteristics similar to or better than most general purpose amplifiers while only drawing 1/30 of the supply current of most general purpose amplifiers. In applications which require low power dissipation and good AC electrical characteristics, this family offers the industry's best speed/power ratio.

The HA-5142/44 provides accurate signal processing by virtue of their low input offset voltage (2mV), low input bias current (45nA), high open loop gain (100kV/V) and low noise (20nV/√Hz), for low power operational amplifiers. These characteristics coupled with a $1.5\text{V}/\mu\text{s}$ slew rate and a 400kHz bandwidth make the HA-5142/44 ideal for use in low power instrumentation, audio amplifier and active filter designs. The wide range of supply voltages (3V to 30V) also allow these amplifiers to be very useful in low voltage battery powered equipment. These parts are also tested and guaranteed at both $\pm 15\text{V}$ and single ended +5V supplies.

These amplifiers are available with industry standard pinouts which allow the HA-5142/5144s to be interchangeable with most other operational amplifiers. For military grade product refer to the 5142, 5144/883 data sheet.
