

SN74CBT3251 1-of-8 FET Multiplexer and Demultiplexer

1 Features

- 5-Ω Switch Connection Between Two Ports
- TTL-Compatible Input Levels
- Low Crosstalk Between Switches
- Fast Switching and Propagation Speeds
- Operating Temperature Range:
–40°C to 85°C

2 Applications

- Digital Radio
- Signal Gating
- Factory Automation
- Televisions
- Appliances
- Programmable Logic Circuits
- Sensors

3 Description

The SN74CBT3251 is a 1-of-8 high-speed TTL-compatible FET multiplexer and demultiplexer. The low ON-state resistance of the switch allows connections to be made with minimal propagation delay.

When output enable ($\overline{OE}$) is low, the SN74CBT3251 is enabled, and S0, S1, and S2 select one of the B outputs for the A-input data.

Device Information⁽¹⁾

PART NUMBER	PACKAGE	BODY SIZE (NOM)

6 Specifications

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)⁽¹⁾

	MIN	MAX	UNIT
Supply voltage, V_{CC}	–0.5	7	V
Input voltage, V_I ⁽²⁾	–0.5	7	V
Continuous channel current		128	mA
Input clamp current, I_K ($V_{I/O} < 0$)		–50	mA
Maximum junction temperature, T_J		150	°C
Storage temperature, T_{stg}	–65	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) The input and output negative-voltage ratings may be exceeded if the input and output clamp-current ratings are observed.

6.2 ESD Ratings

		VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾	±1500
		Charged-device model (CDM), per JEDEC specification JESD22-C101 ⁽²⁾	±1000

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	MAX	UNIT
V_{CC}	Supply voltage	4	5.5	V
V_{IH}	High-level control input voltage	2		V
V_{IL}	Low-level control input voltage		0.8	V
T_A	Operating free-air temperature	–40	85	°C

6.4 Thermal Information

THERMAL METRIC ⁽¹⁾		SN74CBT3251					UNIT
		D (SOIC)	DB (SSOP)	DBQ (SSOP)	PW (TSSOP)	RGY (VQFN)	
		16 PINS	16 PINS	16 PINS	16 PINS	16 PINS	
$R_{\theta JA}$	Junction-to-ambient thermal resistance	73 ⁽²⁾	82 ⁽²⁾	90 ⁽²⁾	108 ⁽²⁾	39 ⁽³⁾	°C/W
$R_{\theta JC(top)}$	Junction-to-case (top) thermal resistance	70.6	49.0	59.0	41.6	52.8	°C/W
$R_{\theta JB}$	Junction-to-board thermal resistance	77.8	49.4	50.1	51.9	20.4	°C/W
ψ_{JT}	Junction-to-top characterization parameter	24.3	10.5	13.9	4.0	1.1	°C/W
ψ_{JB}	Junction-to-board characterization parameter	77.4	48.8	49.7	51.3	20.4	°C/W
$R_{\theta JC(bot)}$	Junction-to-case (bottom) thermal resistance	—	—	—	—	6.4	°C/W

- (1) For more information about traditional and new thermal metrics, see the *Semiconductor and IC Package Thermal Metrics* application report, [SPRA953](#).
- (2) The package thermal impedance is calculated in accordance with JESD 51-7.
- (3) The package thermal impedance is calculated in accordance with JESD 51-5.

6.5 Electrical Characteristics

over operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP ⁽¹⁾	MAX	UNIT
V_{IK}		$V_{CC} = 4.5 \text{ V}$, $I_I = -18 \text{ mA}$			-1.2	V
I_I		$V_{CC} = 5.5 \text{ V}$, $V_I = 5.5 \text{ V}$ or GND			± 1	μA
I_{CC}		$V_{CC} = 5.5 \text{ V}$, $I_O = 0$, $V_I = V_{CC}$ or GND			3	μA
$\Delta I_{CC}^{(2)}$	Control inputs	$V_{CC} = 5.5 \text{ V}$; One input at 3.4 V, other inputs at V_{CC} or GND			2.5	mA
C_i	Control inputs	$V_I = 3 \text{ V}$ or 0		3.5		pF
$C_{io(OFF)}$	A port	$V_O = 3 \text{ V}$ or 0, $\overline{OE} = V_{CC}$		17.5		pF
	B port	$V_O = 3 \text{ V}$ or 0, $\overline{OE} = V_{CC}$		4		
$r_{on}^{(3)}$		$V_{CC} = 4 \text{ V}$, TYP at $V_{CC} = 4 \text{ V}$, $V_I = 2.4 \text{ V}$, $I_I = 15 \text{ mA}$		14	20	Ω
		$V_{CC} = 4.5 \text{ V}$	$V_I = 0$	$I_I = 64 \text{ mA}$	5	7
				$I_I = 30 \text{ mA}$	5	7
				$V_I = 2.4 \text{ V}$, $I_I = 15 \text{ mA}$	10	15

(1) All typical values are at $V_{CC} = 5 \text{ V}$ (unless otherwise noted), $T_A = 25^\circ\text{C}$.

(2) This is the increase in supply current for each input at the specified TTL voltage level, rather than V_{CC} or GND.

(3) Measured by the voltage drop between the A and the B terminals at the indicated current through the switch. On-state resistance is determined by the lower of the voltages of the two (A or B) terminals.

6.6 Switching Characteristics

over operating free-air temperature free-air temperature range, $C_L = 50 \text{ pF}$ (unless otherwise noted)

PARAMETER	FROM (INPUT)	TO (OUTPUT)	V_{CC}	MIN	MAX	UNIT
$t_{pd}^{(1)}$	A or B	B or A	$V_{CC} = 4 \text{ V}$		0.35	ns
			$V_{CC} = 5 \text{ V} \pm 0.5 \text{ V}$		0.24	
t_{pd}	S	A	$V_{CC} = 4 \text{ V}$		6	ns
			$V_{CC} = 5 \text{ V} \pm 0.5 \text{ V}$	2	5.5	
t_{en}	S	B	$V_{CC} = 4 \text{ V}$		6.4	ns
			$V_{CC} = 5 \text{ V} \pm 0.5 \text{ V}$	1.5	5.6	
	$\overline{OE}$	A or B	$V_{CC} = 4 \text{ V}$		6.4	
			$V_{CC} = 5 \text{ V} \pm 0.5 \text{ V}$	1.6	5.8	
t_{dis}	S	B	$V_{CC} = 4 \text{ V}$		6.8	ns
			$V_{CC} = 5 \text{ V} \pm 0.5 \text{ V}$	1.9	6.4	
	$\overline{OE}$	A or B	$V_{CC} = 4 \text{ V}$		6	
			$V_{CC} = 5 \text{ V} \pm 0.5 \text{ V}$	2.3	6.2	

(1) The propagation delay is the calculated RC time constant of the typical on-state resistance of the switch and the specified load capacitance, when driven by an ideal voltage source (zero output impedance).

6.7 Typical Characteristic

Figure 1. I_{CC} Variation With Temperature

7 Parameter Measurement Information

TEST	S1
t_{pd}	Open
t_{PLZ}/t_{PZL}	7 V
t_{PHZ}/t_{PZH}	Open

- NOTES:
- C_L includes probe and jig capacitance.
 - Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control. Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
 - All input pulses are supplied by generators having the following characteristics: $PRR \leq 10 \text{ MHz}$, $Z_O = 50 \Omega$, $t_r \leq 2.5 \text{ ns}$, $t_f \leq 2.5 \text{ ns}$.
 - The outputs are measured one at a time with one transition per measurement.
 - t_{PLZ} and t_{PHZ} are the same as t_{dis} .
 - t_{PZL} and t_{PZH} are the same as t_{en} .
 - t_{PLH} and t_{PHL} are the same as t_{pd} .
 - All parameters and waveforms are not applicable to all devices.

Figure 2. Load Circuit and Voltage Waveforms

8 Detailed Description

8.1 Overview

The SN74CBT3251 device is a single 8-channel multiplexer with three binary control inputs, S_0 , S_1 , and S_2 and an $\overline{OE}$ (output enable, active low) input. The three binary signals select 1 of 8 channels to be turned on, and connect one of the 8 inputs to the output.

When they are used as demultiplexers, the CHANNEL IN/OUT terminals (B) are the outputs and the COMMON OUT/IN terminal (A) is the input.

8.2 Functional Block Diagram

Figure 3. Logic Diagram (Positive Logic)

8.3 Feature Description

The SN74CBT3251 1-of-8 FET multiplexers and demultiplexers can accept a wide range of analog signal levels from 0 V to 5 V. It has low R_{on} resistance, typically 5- Ω for $V_{CC} = 5$ V which allows very little signal loss through the switch. Binary address decoding on chip makes channel selection easy.

8.4 Device Functional Modes

Table 1 lists the functional modes of the SN74CBT3251.

Table 1. Function Table (Each Multiplexer and Demultiplexer)

INPUTS				FUNCTION
$\overline{OE}$	S_2	S_1	S_0	
L	L	L	L	A port = B1 port
L	L	L	H	A port = B2 port
L	L	H	L	A port = B3 port
L	L	H	H	A port = B4 port
L	H	L	L	A port = B5 port
L	H	L	H	A port = B6 port
L	H	H	L	A port = B7 port
L	H	H	H	A port = B8 port
H	X	X	X	Disconnect

9 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

9.1 Application Information

The SN74CBT3251 device can be used for a wide variety of applications, including expanding MCU GPIOs.

9.2 Typical Application

One application of the SN74CBT3251 device is to use in conjunction with a microcontroller to poll a keypad. [Figure 4](#) shows the basic schematic for such a polling system. The microcontroller uses the channel-select pins to cycle through the different channels while reading the input to see if a user is pressing any of the keys. This is a very robust setup that allows for simultaneous key presses with very little power consumption. It also uses very few pins on the microcontroller. The down side of polling is that the microcontroller must frequently scan the keys for a press.

Figure 4. Keypad Polling Application

9.2.1 Design Requirements

These devices use CMOS technology and have balanced output drive. Take care to avoid bus contention because it can drive currents that would exceed maximum limits.

9.2.2 Detailed Design Procedure

1. Recommended input conditions:

- For switch time specifications, see propagation delay times in [Recommended Operating Conditions](#).
- Inputs must not be pulled below ground.
- For input voltage level specifications for control inputs, see V_{IH} and V_{IL} in [Recommended Operating Conditions](#).

Typical Application (continued)

2. Input and output current consideration:
 - Load currents must not exceed per output and must not exceed (Continuous current through V_{CC} or GND) total current for the part. These limits are located in [Absolute Maximum Ratings](#).

9.2.3 Application Curve

Figure 5. r_{ON} Over Temperature

10 Power Supply Recommendations

The power supply can be any voltage between the minimum and maximum supply voltage rating located in [Recommended Operating Conditions](#).

Each V_{CC} pin should have a good bypass capacitor to prevent power disturbance. For devices with a single supply, a 0.1- μ F capacitor is recommended and if there are multiple V_{CC} pins then a 0.01- μ F or 0.022- μ F capacitor is recommended for each power pin. It is ok to parallel multiple bypass caps to reject different frequencies of noise. 0.1- μ F and 1- μ F capacitors are commonly used in parallel. The bypass capacitor should be installed as close to the power pin as possible for best results.

11 Layout

11.1 Layout Guidelines

When using multiple bit logic devices inputs must not ever float. In many cases, functions or parts of functions of digital logic devices are unused; for example, when only two inputs of a triple-input AND gate are used or only 3 of the 4 buffer gates are used. Such input pins must not be left unconnected because the undefined voltages at the outside connections result in undefined operational states. Specified below are the rules that must be observed under all circumstances. All unused inputs of digital logic devices must be connected to a high or low bias to prevent them from floating. The logic level that should be applied to any particular unused input depends on the function of the device. Generally they will be tied to GND or V_{CC} whichever make more sense or is more convenient.

11.2 Layout Example

Figure 6. Layout Diagram

12 Device and Documentation Support

12.1 Documentation Support

12.1.1 Related Documentation

For related documentation, see the following:

⁽¹⁾ **Status:** For more details on status, see our [product life cycle](#).

⁽²⁾ **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

⁽³⁾ **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

⁽⁴⁾ **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

⁽⁵⁾ **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

⁽⁶⁾ **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

BASED ON 0.125 mm THICK STENCIL
SCALE: 10X

4220763/A 05/2022

NOTES: (continued)

7. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
8. Board assembly site may have different recommendations for stencil design.

TSSOP - 1.2 mm max height

SMALL OUTLINE PACKAGE

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.15 mm per side.
4. This dimension does not include interlead flash. Interlead flash shall not exceed 0.25 mm per side.
5. Reference JEDEC registration MO-153.

SSOP - 1.75 mm max height

SHRINK SMALL-OUTLINE PACKAGE

1. Linear dimensions are in inches [millimeters]. Dimensions in parenthesis are for reference only. Controlling dimensions are in inches. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. This dimension does not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed .006 inch, per side.
4. This dimension does not include interlead flash.
5. Reference JEDEC registration MO-137, variation AB.

RGY (R-PVQFN-N16)

PLASTIC QUAD FLATPACK NO-LEAD

4203539-3/I 06/2011

- NOTES:
- All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M-1994.
 - This drawing is subject to change without notice.
 - QFN (Quad Flatpack No-Lead) package configuration.
 - The package thermal pad must be soldered to the board for thermal and mechanical performance.
 - See the additional figure in the Product Data Sheet for details regarding the exposed thermal pad features and dimensions.
- F** Pin 1 identifiers are located on both top and bottom of the package and within the zone indicated. The Pin 1 identifiers are either a molded, marked, or metal feature.
- Package complies to JEDEC MO-241 variation BA.

RGY (R-PVQFN-N16)

PLASTIC QUAD FLATPACK NO-LEAD

THERMAL INFORMATION

This package incorporates an exposed thermal pad that is designed to be attached directly to an external heatsink. The thermal pad must be soldered directly to the printed circuit board (PCB). After soldering, the PCB can be used as a heatsink. In addition, through the use of thermal vias, the thermal pad can be attached directly to the appropriate copper plane shown in the electrical schematic for the device, or alternatively, can be attached to a special heatsink structure designed into the PCB. This design optimizes the heat transfer from the integrated circuit (IC).

For information on the Quad Flatpack No-Lead (QFN) package and its advantages, refer to Application Report, QFN/SON PCB Attachment, Texas Instruments Literature No. SLUA271. This document is available at www.ti.com.

The exposed thermal pad dimensions for this package are shown in the following illustration.
