DESCRIPTION

The *ICSI* IS62LV256 is a very high-speed, low power, 32,768-word by 8-bit static RAM. It is fabricated using *ICSI*'s high-performance CMOS double-metal technology.

When $\overline{CE}$ is HIGH (deselected), the device assumes a standby mode at which the power dissipation is reduced to 10 μ W (typical) with CMOS input levels.

Easy memory expansion is provided by using an active LOW Chip Enable ($\overline{CE}$) input and an active LOW Output Enable ($\overline{OE}$) input. The active LOW Write Enable ($\overline{WE}$) controls both writing and reading of the memory.

The IS62LV256 is pin compatible with other 32K x 8 SRAMs in 300mil DIP and SOJ, 330mil SOP, and 8*13.4mm TSOP-1 packages.
