

PRELIMINARY DATA SHEET

SKY73033: 1700 – 2200 MHz High Gain and Linearity Single Downconversion Mixer for 2G/3G Base Station Applications

Applications

- 2G/3G base station transceivers:
 - GSM/EDGE, CDMA, UMTS/WCDMA
- Land mobile radio
- Wireless Local Loop
- High performance radio links
- Private mobile radio

Features

- Operating frequency range: 1700 to 2200 MHz
- IF frequency range: 40 to 300 MHz
- Conversion gain: 8.5 dB
- Input IP3: 25.0 dBm
- Output IP3: 33.5 dBm
- Noise figure: 9.5 dB
- Integrated LO drivers
- Integrated low loss RF baluns
- High linearity IF amplifiers
- On-chip SPDT LO switch (greater than 40 dB LO-to-LO isolation)
- Small, MCM (20-pin, 5 x 5 mm) Pb-free package (MSL3, 260 °C per JEDEC J-STD-020)

NEW

Skyworks offers lead (Pb)-free RoHS (Restriction of Hazardous Substances) compliant packaging.

Description

The SKY73033 is a fully integrated single mixer that includes Local Oscillator (LO) drivers, an LO switch, high linearity mixers, and large dynamic range Intermediate Frequency (IF) amplifiers. Low loss RF baluns have also been included to reduce design complications and lower system cost.

The SKY73033 features an input IP3 of 25.0 dBm and a Noise Figure (NF) of 9.5 dB, making the device an ideal solution for high dynamic range systems such as 2G/3G base station receivers. The LO switch provides more than 40 dB of isolation between LO inputs and supports the switching time required for GSM/EDGE base stations.

The SKY73033 is manufactured using a robust silicon BiCMOS process and has been designed for optimum long-term reliability. The SKY73033 single downconversion mixer is provided in a compact, 20-pin 5 x 5 mm Multi-Chip Module (MCM). A functional block diagram is shown in Figure 1. The pin configuration and package are shown in Figure 2. Signal pin assignments and functional pin descriptions are provided in Table 1.

Figure 2. SKY73033 Pinout – 20-Pin MCM**Table 1. SKY73033 Signal Descriptions**

Pin #	Name	Description	Pin #	Name	Description
1	VCC_IFRF	IF and RF DC supply, +5V	11	L01	L01 input
2	RF	RF input	12	GND	Ground
3	N/C	No connection	13	GND	Ground
4	GND	Ground	14	N/C	No connection
5	GND	Ground	15	L02	L02 input
6	VCC_LO	LO DC supply, +5V	16	N/C	No connection
7	N/C	No connection	17	GND	Ground
8	VCC_LOSW	LO switch DC supply, +5V	18	IF-	Negative IF output
9	LO_SEL	LO select switch control	19	IF+	Positive IF output
10	GND	Ground	20	RXIF	IF bias adjust

Functional Description

The SKY73033 is a high gain single mixer, optimized for base station receiver applications. The device consists of a low loss RF balun, high linearity passive mixer, and a low noise IF amplifier.

An LO amplifier is also included that allow the SKY73033 to connect directly to the output of a Voltage Controlled Oscillator (VCO). This eliminates the extra gain stages needed by most discrete passive mixers. A Single Pole, Double Throw (SPDT) switch has been included to select between two different LO inputs (LO1 and LO2) for frequency hopping applications such as GSM.

RF Baluns and Passive Mixer

The RF baluns provide a single ended input, which can easily be matched to 50 Ω using a simple external matching circuit. The RF baluns offer very low loss, and excellent amplitude and phase balance.

The high linearity SKY73033 is a passive, double balanced mixer that provides a very low conversion loss, and excellent 3rd Order Input Insertion Point (IIP3).

Additionally, the balanced nature of the mixer provides for high port-to-port isolation.

LO Buffers and SPDT LO Switch

The LO buffers allow the input power of the SKY73033 to be in the range of ± 3 dBm. The LO section is optimized for low-side LO injection. However, each of the two LOs can be driven over a wide frequency range with only slight degradation in performance.

A high isolation SPDT switch allows the SKY73033 to be used for frequency hopping applications. This switch provides greater than 40 dB of LO1 to LO2 isolation:

LO_SEL Input	LO Path Selected
High	LO1 (pin 11) enabled
Low	LO2 (pin 15) enabled

For applications that do not require frequency hopping, LO_SEL is fixed to one state and the appropriate LO input is used. An internal pull-down resistor enables the LO2 input.

IF Amplifier

The SKY73033 includes high dynamic range IF amplifiers that follow the passive mixers in the signal path. The outputs require a supply voltage connection using inductive chokes. These choke inductors should be high-Q and have the ability to handle 200 mA or greater.

A simple matching network allows the output ports to be matched to a balanced 200 Ω impedance. The IF amplifiers are optimized for IF frequencies between 40 and 300 MHz. The IF amplifiers can be operated outside of this range, but with a slight degradation in performance.

Electrical and Mechanical Specifications

The absolute maximum ratings of the SKY73033 are provided in Table 2 and the recommended operating conditions in Table 3. Electrical characteristics for the SKY73033 are provided in Table 4.

Table 2. SKY73033 Absolute Maximum Ratings

Parameter	Symbol	Minimum	Typical	Maximum	Units
Supply voltage, +5 V	VCC	4.5	5.0	5.5	V
Supply current	I _{CC}		200	*** TBD ***	mA
RF input power	P _{RF}			20	dBm
LO input power	P _{LO}		0	6	dBm
Operating case temperature	T _C	-40		+85	°C
Storage case temperature	T _{STG}	-40		+125	°C

Note: Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value.

Table 3. SKY73033 Recommended Operating Conditions

Parameter	Symbol	Minimum	Typical	Maximum	Units
Supply voltage, +5 V	VCC	4.75	5.00	5.25	V
Supply current	I _{CC}		200		mA
LO input power	P _{LO}	-3	0	+3	dBm
LO select input: high low	LO_SEL _H LO_SEL _L	2.2		0.8	V V
Operating case temperature	T _C	-40		+85	°C
RF frequency range	F _{RF}	1700		2200	MHz
LO frequency range (Note 1)	F _{LO}	1460		2000	MHz
IF frequency range	F _{IF}	40		300	MHz

Note 1: The SKY73033 has been optimized for low side LO injection. However, the LO can be used outside of the specified frequency range with degraded performance.

Table 4. SKY73033 Electrical Specifications (1 of 2)

(Voltage Supply = +5 V, T_C = +25 °C, LO = 0 dBm, RF Frequency = 1800 MHz, IF Frequency = 200 MHz, LO Frequency = 1680 MHz, Unless Otherwise Noted)

Parameter	Symbol	Test Condition	Min	Typical	Max	Units
Conversion gain	G			8.5		dB
Noise Figure	NF			9.5		dB
Noise Figure with a blocker signal	NF _{BLK}	Blocking signal input power = +8 dBm		18		dB
Third order input intercept point	IIP3	Tone space = 800 kHz, input tone power = -10 dBm		25.0		dBm
Third order output intercept point	OIP3	Tone space = 800 kHz, input tone power = -10 dBm		33.5		dBm
2RF – 2LO	2x2	P _{RF} = -10 dBm		-68		dBc
3RF – 3LO	3x3	P _{RF} = -10 dBm		-80		dBc
Input 1 dB compression point	IP1dB			14.0		dBm
Output 1 dB compression point	OP1dB			21.5		dBm
LO1-to-LO2 isolation				40		dB
RF to IF isolation				55		dB
LO leakage: @ RF port @ IF port				-40 -45		dBm dBm
LO_SEL input						μA
LO switching time					0.5	μs

Table 4. SKY73033 Electrical Specifications (2 of 2)

(Voltage Supply = +5 V, T_c = +25 °C, LO = 0 dBm, RF Frequency = 1880 MHz, IF Frequency = 200 MHz, LO Frequency = 1680 MHz, Unless Otherwise Noted)

Parameter	Symbol	Test Condition	Min	Typical	Max	Units
RF port input return loss	Z _{IN_RF}	With external matching components	-14			dB
LO port input return loss	Z _{IN_LO}	With external matching components	-14			dB
IF port input return loss	Z _{OUT_IF}	With external matching components	-14			dB

Evaluation Board Description

The SKY73033 Evaluation Board is used to test the performance of the SKY73033 downconversion mixer. An assembly drawing for the Evaluation Board is shown in Figure 3 and the layer detail is provided in Figure 4.

Circuit Design Configurations

The following design considerations are general in nature and must be followed regardless of final use or configuration:

1. Paths to ground should be made as short and as low impedance as possible.
2. The ground pad of the SKY73033 provides critical electrical and thermal functionality. This pad is the main thermal conduit for heat dissipation. Since the circuit board acts as the heat sink, it must shunt as much heat as possible from the device. Therefore, design the connection to the ground

pad to dissipate the maximum heat produced by the circuit board. For more information on soldering the SKY73033, refer to the Package and Handling Information section of this Data Sheet.

3. Skyworks recommends including external bypass capacitors on the VCC voltage inputs of the device.
4. Components L3 and L4 (see Figure 5) are high-Q, low loss inductors. These inductors must be able to pass currents in excess of 200 mA DC.
5. Components R7 and R8 (see Figure 5) allow for external adjustment of the IF amplifier bias points. For operation as specified in Tables 3 and 4, these resistors are not required.

A schematic diagram for the SKY73033 Evaluation Board is shown in Figure 5.

Note: This Evaluation Board is used for several different Skyworks devices.
Capacitor C23 is not used for the device described by this Data Sheet.

Package Dimensions

Figure 6 shows the package dimensions for the 20-pin MCM, and Figure 7 provides the tape and reel dimensions.

Package and Handling Information

Since the device package is sensitive to moisture absorption, it is baked and vacuum packed before shipping. Instructions on the shipping container label regarding exposure to moisture after the container seal is broken must be followed. Otherwise, problems related to moisture absorption may occur when the part is subjected to high temperature during solder assembly.

THE SKY73033 is rated to Moisture Sensitivity Level 3 (MSL3) at 260 °C. It can be used for lead or lead-free soldering. For additional information, refer to the Skyworks Application Note,

PCB Design & SMT Assembly/Rework Guidelines for MCM-L Packages, document number 101752.

Care must be taken when attaching this product, whether it is done manually or in a production solder reflow environment. Production quantities of this product are shipped in a standard tape and reel format. For packaging details, refer to the Skyworks Application Note, *Tape and Reel*, document number 101568.

Electrostatic Discharge (ESD) Sensitivity

The SKY73033 is a static-sensitive electronic device. Do not operate or store near strong electrostatic fields. Take proper ESD precautions.

All measurements are in millimeters.

Dimensioning and tolerancing according to ASME Y14.5M-1994.
