Si106x/Si108x

ULTRA-LOW POWER MCU WITH INTEGRATED HIGH-PERFORMANCE SUB-1 GHZ TRANSCEIVER

Description

Silicon Laboratories' Si106x and Si108x Wireless **MCUs** combine high-performance connectivity and ultra-low power microcontroller processing into a small 5x6 mm form factor. Support for all major frequency bands in the 142 to 1050 MHz range is provided including an integrated advanced packet handling engine and the ability to realize a link budget of up to 146 dB. The devices have been optimized to minimize energy consumption for battery-backed applications by minimizing TX, RX, active, and sleep mode current as well as supporting fast wake-up times. The Si106x and Si108x Wireless MCUs are available in a pin-compatible family of devices that scales from 8 to 64 kB of flash and provides a robust set of analog and digital peripherals including an ADC, dual comparators, timers, and GPIO. These Wireless MCUs are compliant with IEEE 802.15.4g and support worldwide regulatory standards including FCC, ETSI, and ARIB.
