## 1. Application

This specification applies to the color TFT-LCD module LQ104S1DG2C.

This specification is the proprietary product of SHARP CORPORATION (SHARP) and include materials protected under copyright of SHARP. Do not reproduce or cause any third party to reproduce them in any form or by any means, electronic or mechanical, for any purpose, in whole or in part, without the express written permission of SHARP.

The device listed in this specification was designed and manufactured for use in general electronic equipment.

In case of using the device for applications such as control and safety equipment for transportation (controls of aircraft, trains, automobiles, etc.), rescue and security equipment and various safety related equipment which require higher reliability and safety, take into consideration that appropriate measures such as fail-safe functions and redundant system design should be taken.

Do not use the device for equipment that requires an extreme level of reliability, such as aerospace applications, telecommunication equipment (trunk lines), nuclear power control equipment and medical or other equipment for life support.

SHARP assumes no responsibility for any damage resulting from the use of the device which does not comply with the instructions and the precautions specified in this specification .

Contact and consult with a SHARP sales representative for any questions about this device.

## 2. Overview

This module is a color active matrix LCD module incorporating amorphous silicon TFT (Thin Film Transistor). It is composed of a color TFT-LCD panel, driver ICs, control circuit, power supply circuit and a White-LED Backlight unit. Graphics and texts can be displayed on a  $800 \times \text{RGB} \times 600$  dots panel with about 262,144 million colors by using LVDS (Low Voltage Differential Signaling) and supplying +3.3V DC supply voltages for TFT-LCD panel driving and supply voltage for backlight.

The TFT-LCD panel used for this module is a low-reflection and higher-color-saturation type.

The maximum viewing angle is in the 6 o'clock direction.

The 12 o'clock direction is difficult to reverse the grayscale.

The LED driver circuit to drive the backlight is built into the module.

## 3. Mechanical technical literatures

Parameter	technical literatures	Unit
Display size	26 (10.4inch) Diagonal	cm
Active area	211.2 (H) $\times$ 158.4 (V)	mm
Pixel format	800 (H) $\times$ 600 (V) (1pixel=R+G+B dot)	pixel
Aspect ratio	4:3	
Pixel pitch	0.264 (H) $\times$ 0.264 (V)	mm
Pixel configuration	R,G,B vertical stripe	
Display mode	Normally white	
Unit outline dimensions	246.5 (W) $\times$ 179.3 (H) $\times$ 11.0 (D)	mm
Mass	550	g
Surface treatment	Anti-glare and hard-coating 3H	

Outline dimensions are shown in Fig.1.

## 4. Input Terminals

### 4-1. TFT-LCD panel driving

• CN1 (Interface signals and +3.3V power supply)

Veder	Hirose Electric Co., Ltd.	I— PEX
Using connectors	DF9MA-41P-1V(32) DF9B-41P-1V(32)	20026-241*-1F
Corresponding connectors	DF9*-41S-1V(32)	20027-41*-1F

39	Vcc	+3.3V power supply	
40	Vcc	+3.3V power supply	
41	SCAN	Horizontal/Vertical display mode select signal	【Note1】

The horizontal display start timing is settled in accordance with a rising timing of ENAB signal. In case ENAB is fixed "Low", the horizontal start timing is determined as described in 7-2. Do not keep ENAB "High" during operation.

【Note2】SCAN=Low

SCAN=High

#### 4-2. LED backlight

•CN2(LED backlight connector)

Veder	JST	
Used connector	SM06B-SHLS-TF	
Corresponding connector	SHLP-06V-S-B	

Connector No.	Pin No.	symbol	function
CN2	1	$V_{DD}$	+12V power supply
	2	$V_{DD}$	+12V power supply
	3	GND	GND
	4	GND	GND
	5	BL_EN	Backlight ON/OFF signal
	6	PWM	PWM signal

#### 5. Absolute Maximum Ratings

Parameter	Symbol	Condition	Pin	Ratings	Unit	Remark
Supply voltage	$V_{CC}$	$T_a=25^{\circ}\text{C}$	VCC	-0.3 ~ +4.0	V	【Note1,2】
	$V_{DD}$	$T_a=25^{\circ}\text{C}$	VDD	-0.3 ~ +15	V	【Note1,2】
Input voltage	$V_{I1}$	$T_a=25^{\circ}\text{C}$	【Note3】	$-0.3 \sim V_{CC}+0.3$	V	【Note1】
	$V_{I2}$	$T_a=25^{\circ}\text{C}$	BL_EN, PWM	-0.3 ~ +6.0	V	【Note2】
Storage temperature	TSTG	—	—	-30 ~ +80	$^{\circ}\text{C}$	【Note1,4,5】
Operating temperature	TOPA	—	—	-30 ~ +80	$^{\circ}\text{C}$	【Note1,4,5】

【Note1】 Humidity:95%RH Max.(  $T_a \leq 40^{\circ}\text{C}$  ) Note static electricity.

Maximum wet-bulb temperature at  $39^{\circ}\text{C}$  or less. ( $T_a > 40^{\circ}\text{C}$ ) No condensation.

【Note2】 The  $V_{CC}$  power supply capacity must use the one of 2A or more.

The  $V_{DD}$  power supply capacity must use the one of 3A or more.

There is a possibility of causing smoking and the ignition without fusion of LCD fuse when abnormality occurs when the current capacity is smaller than regulated values.

Please install the sprotection function in which the overcurrent and the excess voltage are controlled to the set side when you design the lower current supply.

【Note3】 CK,R0~R5,G0~G5,B0~B5,Hsync,Vsync,SCAN

【Note4】 There is a possibility of causing deterioration in the irregularity and others of the screen and the display fineness though the liquid crystal module doesn't arrive at destruction when using it at  $60 \sim 80^{\circ}\text{C}$ .

【Note5】 In the operating temperature item, the low temperature side is the ambient temperature regulations.

The high temperature side is the panel surface temperature regulations.

## 6. Electrical Characteristics

### 6-1. TFT-LCD panel driving

 $T_a = +25^{\circ}\text{C}$ 

Parameter	Symbol	Condition	Min.	Typ.	Max.	Unit	Remark
Supply voltage	$V_{CC}$		3.0	3.3	3.6	V	【Note1】
Current dissipation	$I_{CC}$	$V_{CC}=3.3\text{V}$	—	250	350	mA	【Note2】
Permissible input ripple voltage	$V_{RP}$		—	—	100	mV <sub>p-p</sub>	$V_{CC} = 3.3\text{V}$
Input voltage	$V_{IH}$		2.1	—	$V_{CC}$	V	【Note3】
	$V_{IL}$		0.0	—	0.8	V	
Input leak current	$I_{OH}$		—	—	400	$\mu\text{A}$	$V_{CC}=+3.3\text{V}$ 【Note3】
	$I_{OL}$		-400	—	—	$\mu\text{A}$	$V_{CC}=0\text{V}$ 【Note3】

【Note1】 On-off conditions for supply voltage

$V_{CC}$ -dip conditions

$$\begin{aligned}
 20\mu\text{s} &< t_1 \leq 10\text{ms} \\
 0 &< t_2 \leq 20\text{ms} \\
 0 &< t_3 \leq 1\text{s} \\
 1\text{s} &\leq t_4 \\
 300\text{ms} &\leq t_5 \\
 300\text{ms} &\leq t_6 \\
 t_7 &\leq 100\text{ms}
 \end{aligned}$$

$$\begin{aligned}
 &2.5\text{V} < V_{CC} \leq 3.0\text{V} \\
 &t_d \leq 10\text{ms}
 \end{aligned}$$

$$V_{CC} < 2.5\text{V}$$

$V_{CC}$ -dip conditions should also follow the On-off conditions for supply voltage

- The relation between the data input and the backlight lighting will recommend the above-mentioned input sequence. When the backlight is turned on before the panel operates, there is a possibility of abnormally displaying. The liquid crystal module is not damaged.

【Note2】 Current dissipation

Typical current situation : 64-gray-bar pattern  
 (  $V_{CC}=+3.3\text{V}$ ,  $f_{ck} = 40\text{MHz}$ ,  $T_a=25^{\circ}\text{C}$  )

【Note3】 CK, R0~R5, G0~G5, B0~B5, Hsync, Vsync, SCAN

## 6-2. LED backlight

Ta=+25°C

Parameter		Symbol	Min.	Typ.	Max.	Unit	Remark
Supply voltage		V <sub>DD</sub>	10.8	12.0	13.2	V	【Note1】
Current dissipation		I <sub>DD</sub>	–	300	400	mA	【Note2】
Permissive input ripple voltage		V <sub>RP_BL</sub>	–	–	200	mV <sub>P-P</sub>	V <sub>DD</sub> =+12.0V
BL_EN	High voltage	V <sub>IH_BLEN1</sub>	2.1	–	5.5	V	【Note3】
	Low voltage	V <sub>IL_BLEN1</sub>	0.0	–	0.8	V	
	Leak current	I <sub>IH_BLEN1</sub>	–	–	2.0	mA	
PWM	High voltage	V <sub>IH_PWM</sub>	2.1	–	5.5	V	【Note4】
	Low voltage	V <sub>IL_PWM1</sub>	0.0	–	0.8	V	
	Leak current	I <sub>IH_PWM</sub>	–	–	(2.0)	mA	
PWM frequency		f <sub>PWM</sub>	200	–	1000	Hz	【Note5】
PWM duty ratio		D <sub>PWM</sub>	10	–	100	%	【Note4,5】
Life time		L	–	50,000 (Module)	–	h	【Reference】 【Note6】

【Note1】 On-off conditions for supply voltage

$$20\mu s \leq t_8 \leq 200ms$$

$$0ms \leq t_9$$

$$0ms \leq t_{10}$$

$$1s \leq t_{11}$$

$$0ms \leq t_{12}$$

$$0ms \leq t_{13}$$

【Note2】 Current dissipation

Typ. value: V<sub>DD</sub>= +12V、Duty=100%

【Note3】 BL\_EN is connected by the pull-Up resistor of about 100kΩ.

【Note4】 PWM is connected by the pull-Up resistor of about 100kΩ.

【Note5】 PWM

$$f_{PWM} = 1/t_{15} \text{ , } D_{PWM} = t_{14}/t_{15}$$

Duty 10% : Min. Luminance

Duty 100% : Max. Luminance

Luminance changes in proportion to the duty ratio.

When the frequency slows, the display fineness might decrease.

【Note6】 Luminance becomes 50% of an initial value. (Ta=25°C, PWM=100%)

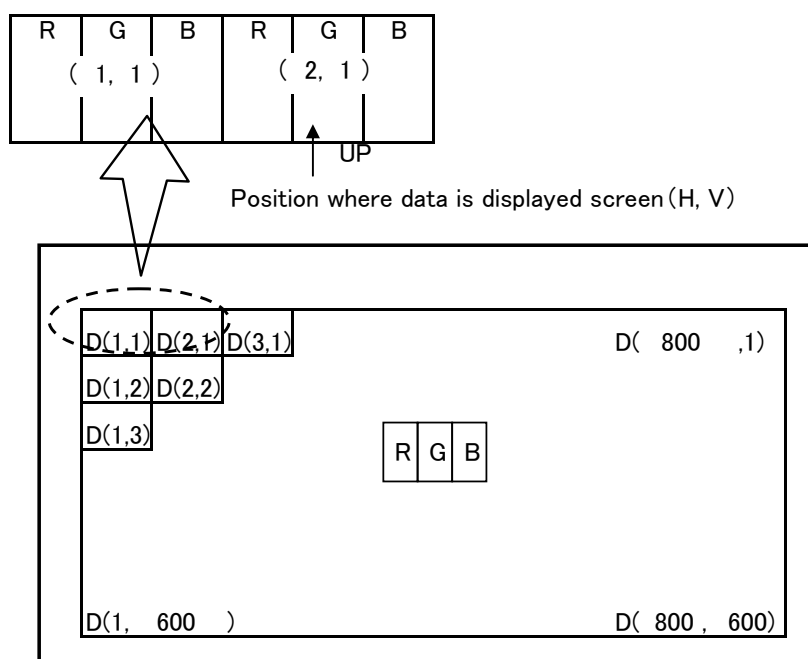

## 7. Timing characteristics of input signals

### 7-1. Timing characteristics

Parameter	Symbol	Min.	Typ.	Max.	Unit	Remark
Clock	Frequency	1/Tc	35.0	40.00	42.0	MHz
	High time	TCH	6	—	—	ns
	Low time	TCL	6	—	—	ns
	Duty ratio	TH/TC	40	50	60	%
Data	Setup time	TDS	3	—	—	ns
	Hold time	TDH	5	—	—	ns
Horizontal sync. signal (Hsync)	Setup time	THC	3	—	—	ns
	Cycle	TH	832	1056	1395	clock
			20.8	26.4	39.9	μs
	Pulse width	THP	2	128	200	clock
	Data start position	THE	88	88	88	clock
Vertical sync. signal (Vsync)	Setup time	TVH	0	—	H-THP	clock
	Cycle	TV	628	666	798	line
	Frequency	1/TV	56	60	70	Hz
	Pulse width	TVP	2	4	6	line
	Data start position	TVS	23	23	23	line
	Hsync-Vsync phase difference	TVh	1	—	TH-THp	clock
ENAB signal	Setup time	TES	3	—	—	ns
	Hold time	TEH	Tc-10	—	—	ns
	Pulse width	TEH	2	800	TH-10	ns
display period	Horizontal	THD	800	800	800	clock
	Vertical	TVD	600	600	600	line

【Note1】 In case of using the long vertical period, the deterioration of display quality, flicker etc. may occur.

### 7-2. Input Data Signals and Display Position on the screen

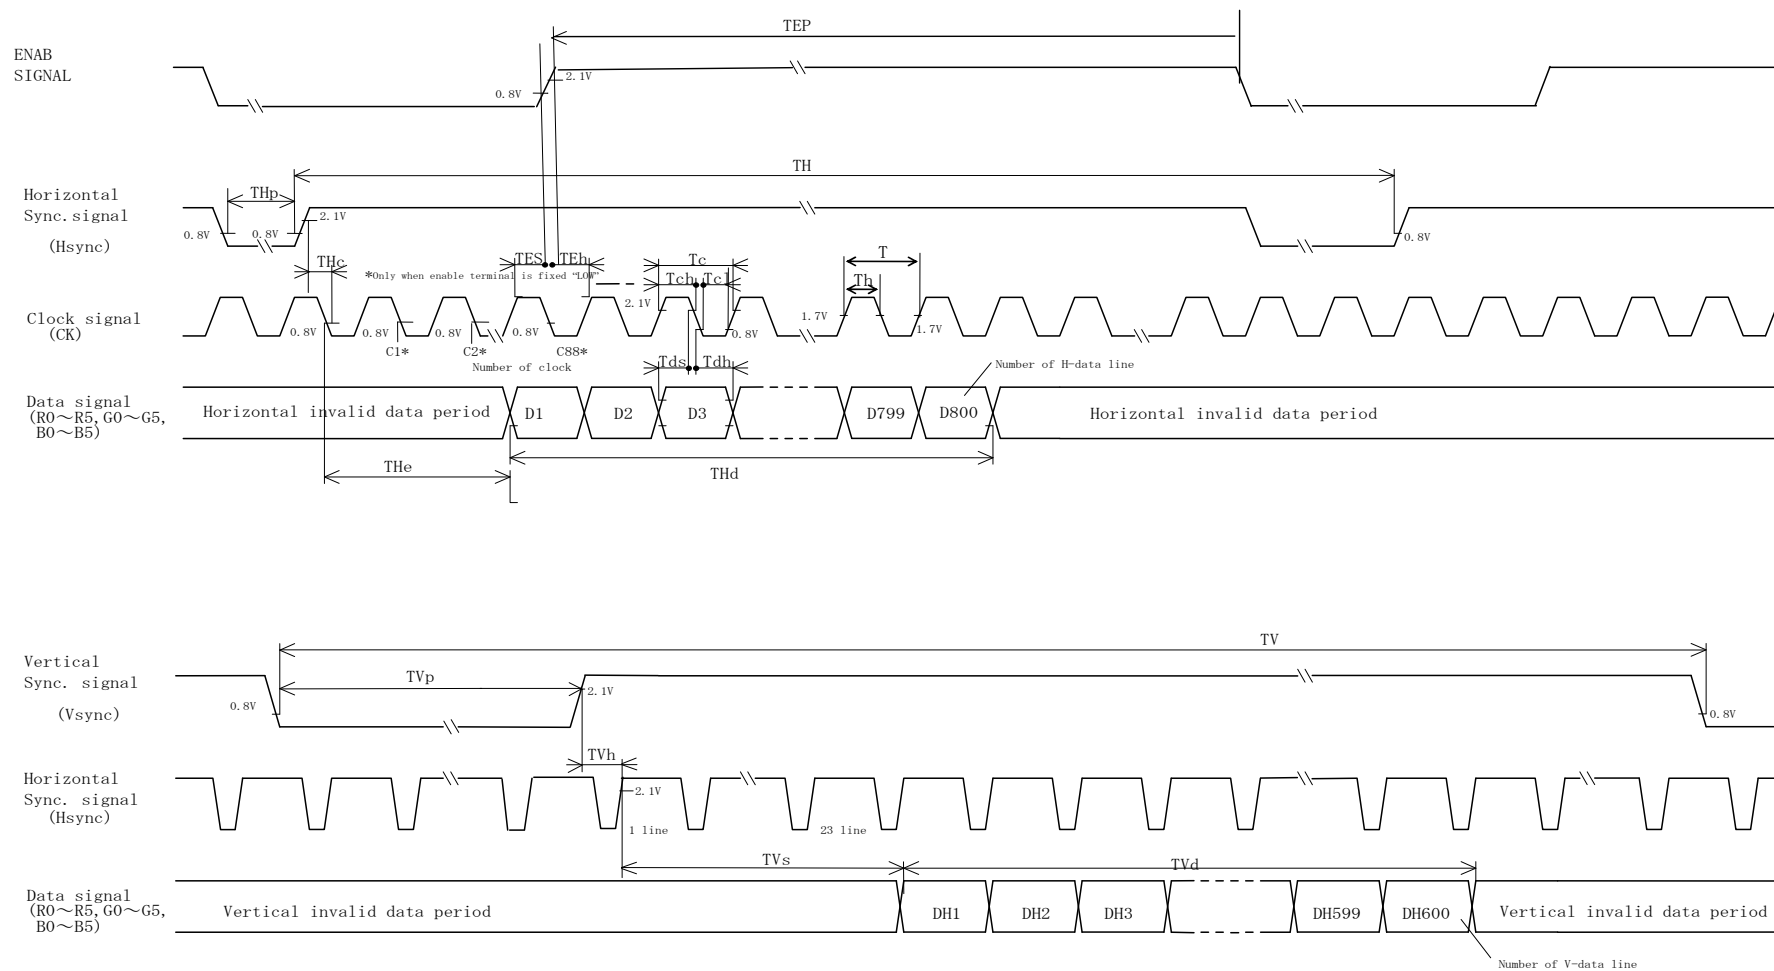

Fig. 1 Input signal waveforms

## 8. Input Signals, Basic Display Colors and Gray Scale of Each Color

### 8-1. 6 bit input

	Colors & Gray scale	Data signal																		
		GrayScale	R0	R1	R2	R3	R4	R5	G0	G1	G2	G3	G4	G5	B0	B1	B2	B3	B4	B5
Basic Color	Black	—	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0
	Blue	—	0	0	0	0	0	0	0	0	0	0	0	0	1	1	1	1	1	1
	Green	—	0	0	0	0	0	0	1	1	1	1	1	1	0	0	0	0	0	0

	Brighter	GS61	0	0	0	0	0	0	1	0	1	1	1	1	0	0	0	0	0	0
Gray Scale of Blue	↓	GS62	0	0	0	0	0	0	0	1	1	1	1	1	0	0	0	0	0	0
	Green	GS63	0	0	0	0	0	0	1	1	1	1	1	1	0	0	0	0	0	0
	Black	GS0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0
	↑	GS1	0	0	0	0	0	0	0	0	0	0	0	0	1	0	0	0	0	0
	Darker	GS2	0	0	0	0	0	0	0	0	0	0	0	0	0	1	0	0	0	0
	↑	↓	↓					↓					↓							
	↓	↓	↓					↓					↓							

0 :Low level voltage    1 :High level voltage

Each basic color can be displayed in 64 gray scales from 6 bit data signals. According to the combination of total 18 bit data signals, the 262,144-color display can be achieved on the screen.

## 9. Optical Characteristics

$T_a=+25^{\circ}\text{C}$ ,  $V_{cc}=+3.3\text{V}$

Parameter		Symbol	Condition	Min.	Typ.	Max.	Unit	Remark
Viewing angle range	Horizontal	$\theta_{21}, \theta_{22}$	CR>10	—	70	—	Deg.	【Note1,2,4】
	Vertical	$\theta_{11}$		—	50	—	Deg.	
		$\theta_{12}$		—	60	—	Deg.	
Contrast ratio		CR	optimized angle	—	500	—		【Note2,4】
Response Time	White Black	$\tau_r + \tau_d$	$\theta = 0^{\circ}$	—	35	—	ms	【Note3,4】
Chromaticity of White		Wx		0.235	0.305	0.375		【Note4】
		Wy		0.260	0.330	0.400		
Luminance of white		Y <sub>L1</sub>		280	350	—	cd/m <sup>2</sup>	【Note4】
White Uniformity				—	—	1.45		【Note5】

※The measurement shall be executed 30 minutes after lighting at rating.

The optical characteristics shall be measured in a dark room or equivalent state with the method shown in Fig.2 below.

fig.2-1 Measuring method of Viewing angle range.

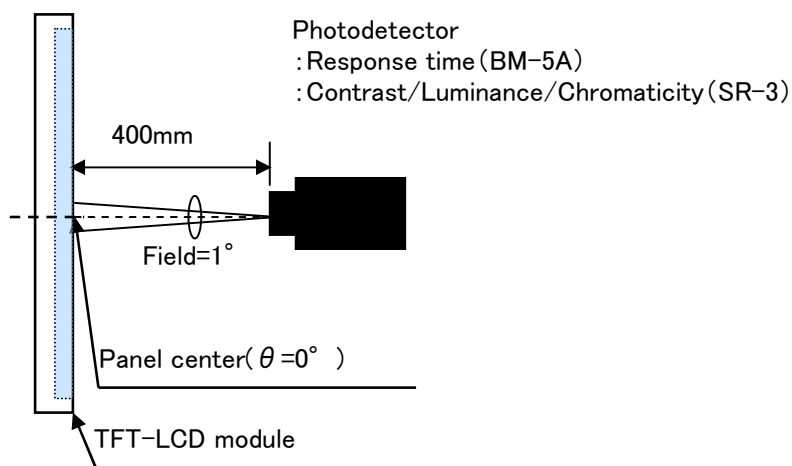

fig.2-2 Measuring method of contrast, luminance, response time, and Chromaticity.

Fig.2 Optical characteristics measurement method

【Note1】Definitions of viewing angle range:

【Note2】Definition of contrast ratio:

The contrast ratio is defined as the following.  $\text{Contrast (CR)} = \frac{\text{Luminance with all pixels white}}{\text{Luminance with all pixels black}}$

【Note3】Definition of response time:

The response time is defined as the following figure and shall be measured by switching the input signal for "black" and "white".

【Note4】This shall be measured at center of the screen.

【Note5】Definition of white uniformity:

White uniformity is defined as the following with five measurements.

(①~⑤)

$$\delta_w = \frac{\text{Maximum luminance of 5 points(①~⑤)}}{\text{Minimum luminance of 5 points(①~⑤)}}$$

## 10. Handling Precautions

### 【Handling Precautions】

- a ) Treat LCD module in dustless surroundings. Metal foreign material stuck to the circuit is possible to cause a short.
- b ) Be sure to design the cabinet so that the module can be installed without any extra stress such as warp or twist.
- c ) Be careful not to give any physical stress onto the circuit and/or the connector of LCD module when you pull/plug a cable. Physical stress will cause a break or worse connection.
- d ) Since the front polarizer is easily damaged, pay attention not to scratch it.
- e ) Use N<sub>2</sub>-blower such as an ionized nitrogen has anti-electrostatic when you blow dusts on Polarizer.
- f ) Since a long contact with water may cause discoloration or spots, wipe it with absorbent cotton or other soft cloth immediately.
- g ) Since CMOS LSI is used in this module, take care of static electricity and injure the human earth when handling. Observe all other precautionary requirements in handling components.
- h ) Be careful with the edge parts of the module which is made of metal.
- i ) Since the panel is made of glass, it may break or crack if dropped or bumped on hard surface. Handle with care.
- j ) When the panel is broken, don't touch the glass. Although the panel is difficult to be scattered, touching the broken part may hurt your hands.
- k ) Liquid crystal contained in the panel may leak if the LCD is broken. Rinse it as soon as possible if it gets inside your eye or mouth by mistake.
- l ) Don't touch the circuit and the pattern of the board. If you touch it, the circuit may be broken.
- m ) Follow the regulations when LCD module is scrapped. The government you stay may have some regulations about it.

### 【Set-Design Precautions】

- a ) Notice : Never take to pieces the module , because it will cause failure. Please don't remove the fixed tape, insulating tape etc. that was pasted on the original module. (except for protection film of the panel)
- b ) Protection film is attached to the module surface to prevent it from being scratched .Peel the film off slowly , just before the use, with strict attention to electrostatic charges. Blow off 'dust' on the polarizer by using an ionized nitrogen.
- c ) Be sure to design the cabinet so that the module can be installed without any extra stress such as warp or twist.
- d ) Connect GND to frame of module to stabilize against EMI and external noise.
- e ) When install LCD modules in the cabinet, please tighten with( " $\text{torque}=0.294 \pm 0.02\text{N} \cdot \text{m}(3.0 \pm 0.2\text{kgf} \cdot \text{cm})$ " ). Be sure to confirm it in the same condition as it is installed in your instrument.
- f ) Since there is a circuit board in the module back, stress is not added at the time of a design assembly. Please make it like. If stress is added, there is a possibility that circuit parts may be damaged.
- g ) It causes an irregular display and the defective indication, etc., when always put constant pressure on the back of the module. Please do not make the structure to press the back of the module.
- h ) Be careful of a back light FPC not to pull by force at the time of the connecting to a W-LED driver, or FPC processing.

- i) The polarizer surface on the panel is treated with Anti-Glare for low reflection. In case of attaching  
Be sure to design the cabinet so that the module can be installed without any extra stress such as warp or twist.
- j) Don't change the volume of LCD module. It is optimized when the shipping. Any change may not meet the specification.
- k) If a minute particle enters in the module and adheres to an optical material, it may cause display non-uniformity issue, etc.  
Therefore, fine-pitch filters have to be installed to cooling and inhalation hole if you intend to install a fan.
- l) Be sure to follow the absolute maximum rating in the specification. The design should consider the surrounding temperature, the fluctuating input signal, and tolerance of the electronic parts. Exceeding values is possible to cause worse characteristic such as burn and/or broken of the parts on LCD module.
- m) Be sure to use LCD module within the recommended operating conditions. Operating module out of the recommended range is not guaranteed even if it is in the absolute maximum rating.
- n) Follow the power, signal, and supply voltage sequence which the specification indicates, regarding on-off input signal after power on of LCD module.
- o) According to the using application, power circuit protection is recommended at module failure.

#### **【Operation Precautions】**

- a) Do not expose the LCD panel to direct sunlight. Lightproof shade etc. should be attached when LCD panel is used under such environment.
- b) When handling LCD modules and assembling them into cabinets, please avoid that long-terms storage in the environment of oxidization or deoxidization gas and the use of such materials as reagent, solvent, adhesive, resin, etc. which generate these gasses, may cause corrosion and discoloration of the modules.  
Do not use the LCD module under such environment.
- c) An abnormal display by changing in quality of the polarizing plate might occur regardless of contact or no contact to the polarizing plate, because of epoxy resin (amine system curing agent) that comes out from the material and the packaging material used for the set side, the silicon adhesive (dealcoholization system and oxime system), and the tray blowing agents (azo-compound), etc. Please confirm adaptability with your employed material.
- d) Don't use polychloroprene (CR) with LCD module. It will generate chlorine gas, which will damage the reliability of the connection part on LCD panel.
- e) Be careful when using it for long time with fixed pattern display as it may cause accidental image.  
Please use a screen saver etc., in order to avoid an afterimage.
- f) The LED (Light Emitting Diode) used in this LCD module is very sensitive to temperature change. If it operates for extremely long time under high temperature, it is possible rapidly to shorten the life time of LED.  
In case of such a condition, consult with us.
- g) If stored at the temperatures lower than the rated storage temperature, the LC may freeze and it may cause LCD panel damage. If storage temperature exceeds the specified rating, the molecular orientation of the LC may change to that of a liquid, and they may not revert to their original state. Store the module in normal room temperature.
- h) Keep LCD module in the range of the specified temperature conditions at all times. Once out of the range, liquid crystal will lose its characteristics, and it cannot recover.
- i) Nature of dew consideration prevention is necessary when LCD is used for long time under high-temperature and high-humidity.

## 11. Packing form

- a) Piling number of cartons : 8 (Max)
- b) Package quantity in one carton: 10
- c) Carton size(TYP): 497(W)×318(D)×227(H)
- d) Total mass of one carton filled with full modules(20pcs): 7.8 kg

Packing form is shown in Fig 3.

## 12. Reliability test items

No.	Test item	Conditions	Remark
1	High temperature storage test	Ambient temperature 80°C 240H	【Note1】
2	Low temperature strage test	Ambient temperature -30°C 240H	【Note1】
3	High temperature & high humidity operation test	Ambient temperature 40°C、Humidity 95% RH 240H (No condensation.)	【Note1】
4	High temperature operation test	Panel surface (Active Area) 80°C 240H	【Note1】
5	Low temperature operation test	Ambient temperature -30°C 240H	【Note1】
6	Vibration test	< Sin wave > Frequency : 10~57Hz/Vibration width (one side) : 0.076mm : 57~500Hz/Gravity: 9.8m/s <sup>2</sup> Sweep time: 11minutes Test period : 3H(X, Y, Z direction 1H)	【Note1】
7	Shock test	Max. gravity: 490m/s <sup>2</sup> Pulse width: 11ms Direction: ±X, ±Y, ±Z Test period : 1time/1direction	【Note1】

【Note1】 Under the display quality test conditions with normal operation state, these shall be no change which may affect practical display function. (normal operation state: Temperature: 15~35°C, Humidity: 45~75%, Atmospheric pressure: 86~106kpa)

### 13. Others

13-1. Lot No Label:

A) Module serial label

The label that displays SHARP·Model No.( LQ104S1DG2C)·Lot No. is stuck on the back of the module.

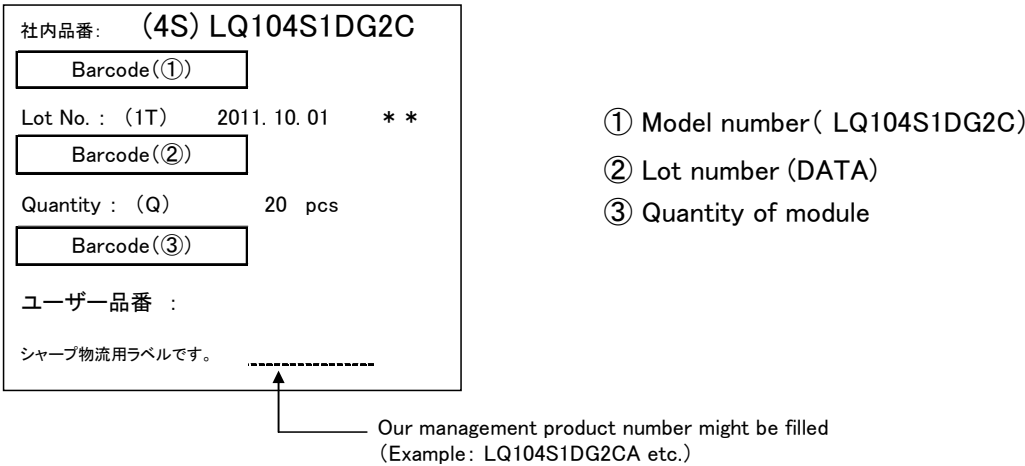

B) Backlight serial label

The label that displays the model No. and lot No. for the backlight is stuck on the back of the module.

13-2. Packing box Label:

The label that displays ①Model number( LQ104S1DG2C) ②Lot number ③Quantity of module is stuck on the packing box. Moreover, the display of bar code also applies to this.

A right picture is written to the packing box of module for the RoHS restriction.

※ R.C.(RoHs Compliance) means these parts have corresponded with the RoHs directive.

This module corresponds from the first sample to RoHS Directive.

The production country of the figure below is written in the wrapping box.

MADE IN JAPAN OR MADE IN CHINA

R.C.

13-3. The ozone-depleting substances is not used.

13-4. If any problem occurs in relation to the description of this specification , it shall be resolved through discussion with spirit of cooperation.

## 14. Storage conditions

Environmental condition range of storage temperature and humidity

Temperature            0 to 40 degrees Celsius

Relative humidity    95% and below

【Note】Please refer below as a mean value of the environmental conditions.

Summer time    temperature    20 to 35 degrees Celsius    humidity    , 85% and below

Winter time    temperature    5 to 15 degrees Celsius    humidity    , 85% and below

Please maintain within 240 hours of accumulated length of storage time, with conditions of 40 degrees Celsius and room humidity of 95%.

Direct sun light

Please keep the product in a dark room or cover the product to protect from direct sun light.

Atmospheric condition

Please refrain from keeping the product with possible corrosive gas or volatile flux.

Prevention of dew

Please store the product carton either on a wooden pallet or a stand / rack to prevent dew.

Do not place directly on the floor. In addition, to obtain moderate ventilation in between the pallet's top and bottom surfaces, pile the cartons up in a single direction and in order.

Please place the product cartons away from the storage wall.

Storage period

Within above mentioned conditions, maximum storage period should be one year.

## NOTES

1. UNSPECIFIED TOLERANCE TO BE  $\pm 0.5$
2. WARP AND FLATING FOR PCB AND CHASSIS ARE EXCLUDED FROM THICKNESS AND DIMENSION OF THE UNIT.
3. FRONT SIDE: REGARDING THE HEIGHT OF USER'S BOSSES, PLEASE DESIGN THEM FROM  $\phi 6\text{mm}$  TO  $\phi 7\text{mm}$ .
4. REAR SIDE: REGARDING THE HEIGHT OF USER'S BOSSES, PLEASE DESIGN THEM FROM  $\phi 6\text{mm}$  TO  $\phi 7.5\text{mm}$ .
5. RECOMMENDED TIGHTEN TORQUE FOR MOUNTING.  
 $0.294 \pm 0.02 \text{N} \cdot \text{m} (3.0 \pm 0.2 \text{kgf} \cdot \text{cm})$

- 1) TOLERANCE X-DIRECTION A:  $1.7 \pm 0.8$
- 2) TOLERANCE Y-DIRECTION B:  $2.0 \pm 0.8$
- 3) OBLIQUITY OF DISPLAY AREA  $|C-D| < 0.8$
