LD6A LED SignalLight Towers

Stylish design

- The $\phi 40 \times 60$ oval shape of the SignalLight presents a stylish image.
LD6A LED SignalLight is highly visible due to the striped design, making a clear distinction between illuminating and non-illuminating areas.
- Unlike conventional products, the non-illuminating area is covered, making a distinction between non-illuminating and illuminating areas. This enables the illuminating area to provide brighter illumination.

Unique lens shape offers high visibility

Three different illumination methods and a unique lens shape enable high visibility from different directions.

■ Characteristics of the lens and light

LD6A LED SignalLight Towers

Four different mounting styles

- Four different mounting styles are available which enable mounting on aluminum frames, wall mounting, direct mounting, and pole mounting.

Frame Mount

(The Signalight in the above photo is attached to a 40-mm-sq. aluminum frame)

Wall Mount

Direct Mount

Pole Mount

- Marking is possible in the non-illuminating areas.

- The color arrangement can be changed easily by stacking LED units. The LED units use plug-in terminals which have proven to provide high reliability for IDEC relays. Optional LED units are available for expansion. (The length of the center screw needs to be changed.)

- Up to 5 LED units with 5 different illumination colors – red, yellow, blue, green, pure white – can be stacked. Dark gray and light gray housings are available. IP65 protection degree – dustproof and waterproof.

Safety Precautions

- Turn off the power to the LD6A series before mounting, dismounting, wiring, and assembling the LED unit. Make sure of correct wiring, otherwise electrical shocks or fire may result.
- Mount LD6A on a solid surface not subjected to vibrations.
- Do not mount the LD6A upside-down or horizontally.

- Do not leave the LD6A without a cap or unassembled.
- Install the supplied gasket, otherwise waterproof characteristics is impaired.
- Do not apply any chemicals which may corrode the plastic material.
- If the LD6A is subjected to strong vibrations, the hexagon socket screw may become loose. Take measures to prevent loosening. (See the figure on the right.)

- Do not loosen the screw for which the tightening torque is not specified.

Instructions

Mounting

•Frame Mounting

1. Insert two nuts in the frame, and attach the bracket using two M5 screws.
Recommended tightening torque: 2.6 to 2.7 N·m
2. Mount the LD6A to the bracket using four M4 screws.
Recommended tightening torque: 1.6 to 1.7 N·m

Note: See table below for typical examples of frames and nuts. Consult the manufacturer of the frame for the installation method of the frame nut.

- Examples of recommended frames and frame nuts

Frame Size	Frame	Frame Nut	Manufacturer
□30 mm (Note)	SFF-302	SFB-001 SFB-4B5 SFB-101	SUS Corporation
□40 mm	SFF-402	SFB-008 SFB-4A5 SFB-108	

Note: The mounting bracket for the housing is 40 mm.

When using a frame mount type, be sure to use flexible conduit, otherwise the waterproof characteristic is impaired. Refer to the "Example of Flexible Conduit" shown on the right.

- Example of Flexible Conduit

Conduit Port Size	M20
Gland	AL16/M20/A/BL
Conduit	PAFS16BL
Manufacturer	Adaptaflex

•Wall Mounting

1. Make four tapped holes in the mounting panel and mount the bracket and gasket using four screws (M4 x 20).
Recommended tightening torque: 1.6 to 1.7 N·m
2. Mount the LD6A to the bracket using four screws (M4 x 8).
Recommended tightening torque: 1.6 to 1.7 N·m

Direct Mounting

- Recommended tightening torque: 2.6 to 2.7 N·m

Pole Mounting

The pole mount type can be installed in four ways. The recommended mounting method (pattern 4) is described below.
Recommended tightening torque: 2.6 to 2.7 N·m (M5 screw)

Wiring

- Connect the wiring as shown below. Incorrect wiring may damage the internal circuit.
- Be sure to insulate unused wires.
- Connect an appropriate fuse to the power line as shown in the figure on page 7.
- Use a fuse with 1A rated current.
- Use a UL listed external fuse holder.
- Use a class 2 power supply only.
- When using the same color for two or more tiers, only one wire is used to light all tiers of the same color. Determine the contact capacity in consideration of the LED rated current.

•Wire Color

LED Color	Wire Color
LED Unit-Red	Red
LED Unit-Yellow	Orange
LED Unit-Blue	Blue
LED Unit-Green	Green
LED Unit-Pure White	White
Power Line	Yellow

Highest Temperature Limitations

The highest temperature is limited to 50°C when all tiers are lit continuously in the following combinations:

1. Two or more tiers including blue and green (example: Red-Green-Blue, Green-Green-Red)
2. Four or five tiers (example: Red-Yellow-Green-Pure White, Red-Yellow-Blue-Green-Pure White)
