

3.5 A step down switching regulator

Datasheet - production data

SO-20 (12+4+4)

Features

- Up to 3.5 A step down converter
- Operating input voltage from 8 V to 55 V
- 3.3 V and 5.1 V ($\pm 1\%$) fixed output, and adjustable outputs from:
 - 0.5 V to 50 V (3.3 type)
 - 5.1 V to 50 V (5.1 type)
- Frequency adjustable up to 300 kHz
- Voltage feed forward
- Zero load current operation (min. 1 mA)
- Internal current limiting (pulse by pulse and HICCUP mode)
- Precise 5.1 V (1.5%) reference voltage externally available
- Input/output synchronization function
- Inhibit for zero current consumption (100 mA typ. at $V_{CC} = 24$ V)
- Protection against feedback disconnection

- Thermal shutdown
- Output over voltage protection
- Soft-start function

Description

The L4973 is a step down monolithic power switching regulator delivering 3.5 A at fixed voltages of 3.3 V or 5.1 V and using a simple external divider output adjustable voltage up to 50 V. Realized in BCD mixed technology, the device uses an internal power D-MOS transistor (with a typical $R_{DS(on)}$ of 0.15 Ω) to obtain very high efficiency and very fast switching times. Switching frequency up to 300 kHz are achievable (the maximum power dissipation of the packages must be observed). A wide input voltage range between 8 V to 55 V and output voltages regulated from 3.3 V to 40 V cover the majority of the today applications. Features of this new generation of DC-DC converter includes pulse by pulse current limit, hiccup mode for output short circuit protection, voltage feed forward regulation, soft-start, input/output synchronization, protection against feedback loop disconnection, inhibit for zero current consumption and thermal shutdown. Package available is SO-20 (12+4+4) for SMD assembly.

2.2 Pin description

Table 1. Pin description

N° Pin	Name	Description
12	COMP	E/A output to be used for frequency compensation
11	INH	A logic signal (active high) disables the device (sleep mode operation). If not used it must be connected to GND; if floating the device is disabled.
10	BOOT	A capacitor connected between this pin and the output allows to drive the internal D-MOS.
20	SYNC	Input/Output synchronization.
8,9	V _{CC}	Unregulated DC input voltage
2,3	OUT	Stepdown regulator output.
13	VFB	Stepdown feedback input. Connecting the output directly to this pin results in an output voltage of 3.3 V for the L4973V3.3 and 5.1 V for L4973V5.1. An external resistive divider is required for higher output voltages. For output voltage resistive divider is required for higher output voltages. For output voltage less than 3.3 V, see Note and Figure 30 .
18	V5.1	Reference voltage externally available.
4,5,6,7 14,15,16,17	GND	Signal ground
1	OSC	An external resistor connected between the unregulated input voltage and Pin 1 and a capacitor connected from Pin 1 to ground fixes the switching frequency. (Line feed forward is automatically obtained)

Note: The maximum power dissipation of the package must be observed.

3 Electrical data

3.1 Maximum ratings

Table 2. Absolute maximum ratings

Symbol	Parameter	Value	Unit
V_9, V_8	Input voltage	58	V
V_2, V_3	Output DC voltage	-1	V
	Output peak voltage at $t = 0.1 \mu\text{s}$ $f = 200 \text{ kHz}$	-5	V
I_2, I_3	Maximum output current	int. limit.	
V_{10}, V_8		14	V
V_{10}	Bootstrap voltage	70	V
V_{12}	Analog input voltage ($V_{CC} = 24 \text{ V}$)	12	V
V_{19}	Analog input voltage ($V_{CC} = 24 \text{ V}$)	13	V
V_{13}	($V_{CC} = 20 \text{ V}$)	6	V
		-0.3	V
V_{20}	($V_{CC} = 20 \text{ V}$)	5.5	V
		0.3	V
V_{11}	Inhibit	V_{CC}	V
		-0.3	V
P_{tot}	Power dissipation at $T_{\text{pins}} = 90 \text{ }^\circ\text{C}$	4	W
T_J, T_{STG}	Junction and storage temperature	-40 to 150	$^\circ\text{C}$

3.2 Thermal data

Table 3. Thermal data

8 Package mechanical data

In order to meet environmental requirements, ST offers these devices in different grades of ECOPACK packages, depending on their level of environmental compliance. ECOPACK specifications, grade definitions and product status are available at: www.st.com. ECOPACK is an ST trademark.
