

SMD Multi Element Phototransistor

Type OPR5013

Features

- Surface mountable
- Closely matched responsivity
- Precise active area location
- High temperature operation

Description

The OPR5013 is a thirteen element NPN silicon phototransistor in a high temperature polyimide chip carrier. The single chip construction insures excellent matching and very tight dimensional tolerances between active areas. The custom opaque package material shields the photodiodes from stray light and can withstand multiple exposures to the most demanding soldering conditions. The wrap around solder pads are gold plated for exceptional storage and wetting characteristics.
