Rev. 05 — 9 May 2008

Product data sheet

1. General description

The 74AHC132; 74AHCT132 is a high-speed Si-gate CMOS device and is pin compatible with Low-power Schottky TTL (LSTTL). It is specified in compliance with JEDEC standard No. 7-A.

The 74AHC132; 74AHCT132 contains four 2-input NAND gates which accept standard input signals. They are capable of transforming slowly changing input signals into sharply defined, jitter free output signals. The gate switches at different points for positive-going and negative-going signals. The difference between the positive voltage V_{T+} and the negative V_{T-} is defined as the hysteresis voltage V_H .

2. Features
