Ordering Information

D53G-020.0M* or D53G-026.0M*

* For the tape and reel option, add -T to the end of the part number. Example: D53G-020.0M-T

Notes:

1. Frequency Calibration; frequency measured at Vcc = 3.3 Vdc, 25°C , referenced to Fo.
2. Frequency stability vs. change in temperature. $[\pm(F_{\text{max}} - F_{\text{min}})/2.F_0]$.
3. Frequency change after reciprocal temperature ramped over the operating range. Frequency measured before and after at 25°C .
4. Within two hours after reflow soldering
5. BW=12K Hz to 20 MHz.
6. Output is DC coupled
7. For best performance it is recommended that the circuit connected to this output should have an equivalent input capacitance of 10 pF.
