(1) OCL: Open Circuit Inductance test parameters: 100 kHz, 0.1 V_{rms}, 0.0 Adc.

(2) I_{rms}: DC current for an approximate ΔT of 40 °C without core loss. Derating is necessary for AC currents. PCB layout, trace thickness and width, air-flow, and proximity of other heat generating components will affect the temperature rise. It is recommended that the temperature of the part not exceed +105 °C under worst case operating conditions verified in the end application.

(3) Isat Amperes peak for approximately 20% rolloff (@ +20 °C)

(4) Isat Amperes peak for approximately 30% rolloff (@ +20 °C)

(5) K-factor: Used to determine B p-p for core loss (see graph).

B p-p = K*L*ΔI, B p-p: (Gauss), K: (K factor from table), L: (Inductance in μH),
ΔI(Peak to peak ripple current in Amps).
