TW-DIY-5024

Logic Probe Kit - DIY

[zoom photo](#)

• Logic Probe Kit - DIY

An important piece of equipment for test & measurement of digital equipment. Can be used in finding & testing as well as to aid in design work & to find out if digital equipment works. Switch either TTL or CMOS. Our modern design using a PUT. Includes detection circuit for very fast pulse. Gives visual (3 LEDs) and a (piezo buzzer) response.

Terrific Starter Kit.
