CBT-120 LEDs

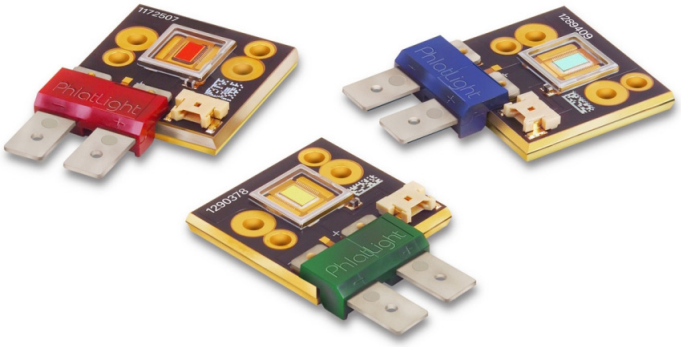

Table of Contents

Features:

- Extremely high optical output: Over 1225 Red Lumens
  Over 2000 Green lumens
  Over 470 Blue Lumens
- High thermal conductivity package - junction to heat sink thermal resistance of only 0.7 °C/W
- Photonic lattice technology for very high surface brightness and uniform emission
- Large, monolithic chip with surface emitting area of 12 mm^2
- High luminous efficacy
- Lumen maintenance of greater than 70% after 60,000 hours
- Environmentally friendly: RoHS compliant
- Variable drive currents: less than 1 A through 30 A
- Currently available in Red, Green and Blue; other colors to follow

Applications

- Entertainment
- Architectural Lighting
- Medical Lighting
- Spot Lighting
- Fiber Coupled Illumination
- Emergency Vehicle Lighting
- Machine Vision
- Projection Systems
- Displays and Signage
- General Illumination

Technology Overview

Luminus Big Chip LEDs™ benefit from a suite of innovations in the fields of chip technology, packaging and thermal management. These breakthroughs allow illumination engineers and designers to achieve solutions that are high brightness and high efficiency.

Photonic Lattice Technology

Luminus' photonic lattice technology enables large area LED chips with uniform brightness over the entire LED chip surface. The optical power and brightness produced by these large monolithic chips enable solutions which replace arc and halogen lamps where arrays of traditional high power LEDs cannot.

For red, green and blue LEDs, the photonic lattice structures extract more light and create radiation patterns that are more collimated than traditional LEDs. Having higher collimation from the source increases optical collection efficiencies and simplifies optical designs.

Packaging Technology

Thermal management is critical in high power LED applications. With a thermal resistance from junction to heat sink of 0.7° C/W, Luminus CBT-120 LEDs have the lowest thermal resistance of any LED on the market. This allows the LED to be driven at higher current densities while maintaining a low junction temperature, thereby resulting in brighter solutions and longer lifetimes.

Reliability

Designed from the ground up, Luminus Big Chip LEDs are one of the most reliable light sources in the world today. Big Chip LEDs have passed a rigorous suite of environmental and mechanical stress tests, including mechanical shock, vibration, temperature cycling and humidity, and have been fully qualified for use in extreme high power and high current applications. With very low failure rates and median lifetimes that typically exceed 60,000 hours, Luminus Big Chip LEDs are ready for even the most demanding applications.

Environmental Benefits

Luminus LEDs help reduce power consumption and the amount of hazardous waste entering the environment. All Big Chip LED products manufactured by Luminus are RoHS compliant and free of hazardous materials, including lead and mercury.

Understanding Big Chip LED Test Specifications

Every Luminus LED is fully tested to ensure that it meets the high quality standards expected from Luminus' products.

Testing Temperature

Luminus core board products are typically measured in such a way that the characteristics reported agree with how the devices will actually perform when incorporated into a system. This measurement is accomplished by mounting the devices on a 40°C heat sink and allowing the device to reach thermal equilibrium while fully powered. Only after the device reaches equilibrium are the measurements taken. This method of measurement ensures that Luminus Big Chip LEDs perform in the field just as they are specified.

Multiple Operating Points (4.2 A, 18 A, 30 A)

The tables on the following pages provide typical optical and electrical characteristics. Since the LEDs can be operated over a wide range of drive conditions(currents from <1A to 30 A, and duty cycle from <1% to 100%), multiple drive conditions are listed.

CBT-120 devices are production specified at 18 A. The values shown at 4.2 A and 30 A are for additional reference at other possible drive conditions.

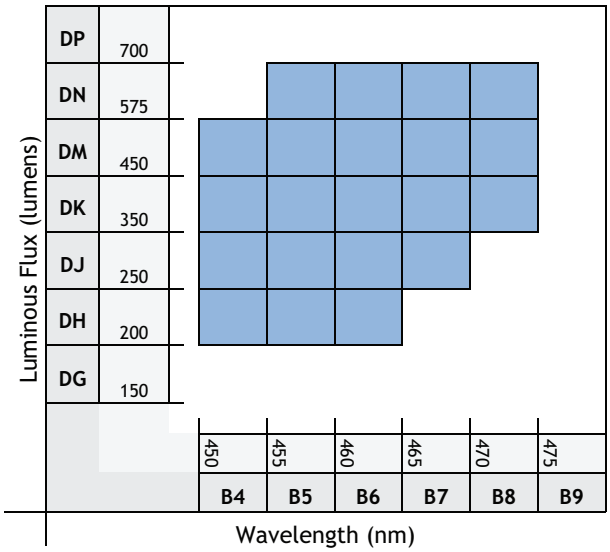
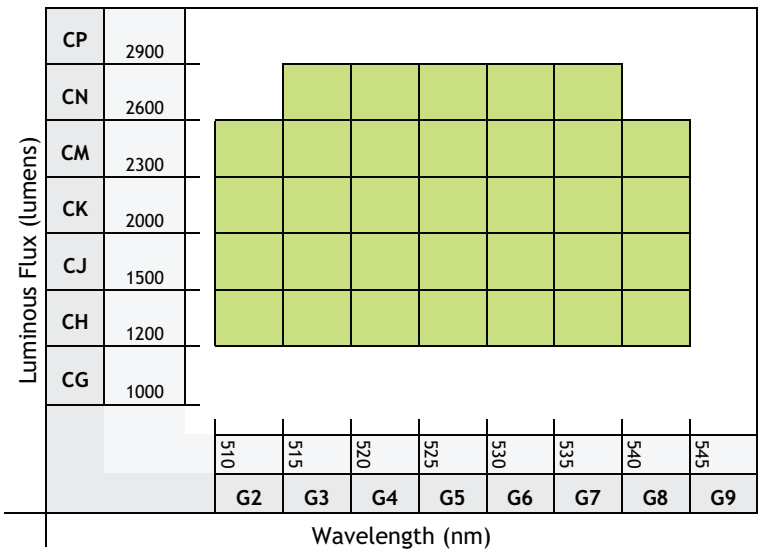
Big Chip CBT-120 RGB Bin Structure

CBT-120 LEDs are specified for luminous flux and chromaticity/wavelength at a drive current of18 A (1.5 A/mm^2) and placed into one of the following luminous flux (FF) and wavelength (WW) bins:

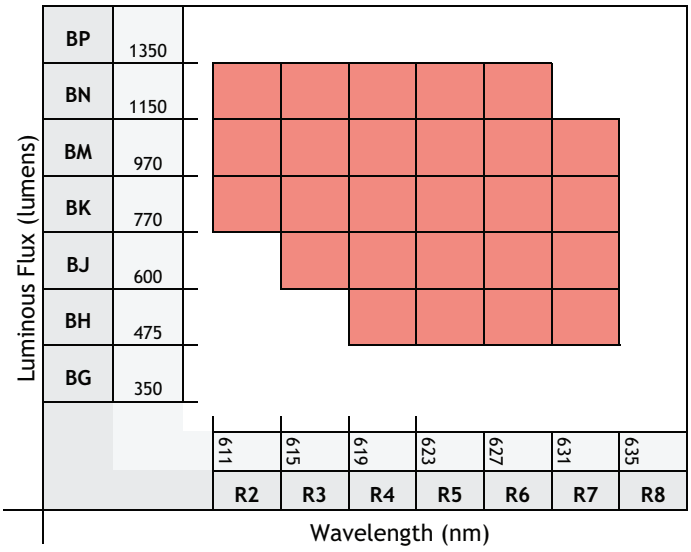
Blue Bins



Green Bins



Red Bins



Note 1: Luminus maintains a +/- 6% tolerance on flux measurements.

Note 2: Only specific bins are available, please call Luminus sales team for details.

Luminus Devices, Inc. • T 978.528.8000 • www.luminus.com
1100 Technology Park Drive • Billerica, MA 01821

CBT-120 Shipping & Labeling Information

All CBT-120 products are packaged and labeled with their respective bin as outlined in the tables on page 3. When shipped, each package will only contain one bin. The part number designation is as follows:

CBT — 120 — X — C11 — FF — WW

Product Family	Chip Area	Color	Package Configuration	Flux Bin	Wavelength Bin
CBT: Chip on Board	120: 12.0 mm^2	R: Red G: Green B: Blue	C11: 28 x 27 mm board	See page 3 for bins	See page 3 for bins

Note 1: WNNX nomenclature corresponds to the following:
W = White
NN = color temperature, where:
65 corresponds to 6500K
40 corresponds to 4000K
30 corresponds to 3000K, etc.
X = color rendering index, where:
S (standard) corresponds to a typical CRI of 70
M (moderate) corresponds to a typical CRI of 83
H (high) corresponds to a typical CRI of 92

Note 2: Some flux and wavelength bins may have limited availability. Application specific bin kits, consisting of multiple bins, may be available. For ordering information, please refer to page 12 and reference the PDS-001393 Binning and Labeling Rev 06 document.

Example:
The part number CBT-120-R-C11-BM-R4 refers to a red, CBT-120 module, with a flux range of 970-1,150 lumens and a wavelength range of 619 nm to 623 nm.

Thermal Coefficient of Junction Voltage		-1.3	-4.6	-3.5	mV/ °C

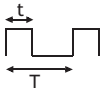
Absolute Maximum Ratings

	Symbol	Red	Green	Blue	Unit
Maximum Current		36	36	36	A
Maximum Junction Temperature	T_{jmax}	125	150	150	°C
Storage Temperature Range		-40/+100	-40/+100	-40/+100	°C

Note 1: *All ratings are based on operation with a constant heat sink temperature Ths =40°C. See Thermal Resistance section for Ths definition.*

Note 2: *Listed drive conditions are typical for common applications. CBT-120 devices can be driven at currents ranging from <1 A to 30 A and at duty cycles ranging from 1% to 100%. Drive current and duty cycle should be adjusted as necessary to maintain the junction temperature desired to meet application lifetime requirements.*

Note 3: *Current Density of 2.5 A/mm2. Rated at 50% duty cycle and Pulsed operation frequency of f>360Hz;* $DC = \frac{t}{T}$



Note 4: *Unless otherwise noted, values listed are typical. Devices are production tested and specified at 18 A. Values at 4.2 A and 30 A are for reference only.*

Note 5: *Total flux from emitting area at listed dominant wavelength. Reported performance is included to show trends for a selected power level. For specific minimum and maximum values, use bin tables. For product roadmap and future performance of devices, contact Luminus.*

Note 6: *Minimum and Maximum Dominant Wavelengths are based on typical values +/- 5nm for Red, +/- 8nm for Green and +/- 6nm for Blue.*

Note 7: *In CIE 1931 chromaticity diagram coordinates, normalized to X+Y+Z=1.*

Note 8: *For reference only.*

Note 9: *CBT-120 LEDs are designed for operation to an absolute maximum current as specified above. Product lifetime data is specified at recommended forward drive currents. Sustained operation at or beyond absolute maximum currents will result in a reduction of device life ime compared to recommended forward drive currents. Actual device lifetimes will also depend on junction temperature. Refer to the lifetime derating curves for further information. In pulsed operation, rise time from 10-90% of forward current should be larger than 0.5 microseconds.*

Note 10: *Lifetime dependent on LED junction temperature. Input power and thermal system must be properly managed to ensure lifetime. See charts on pg 9 for further information.*

Note 11: *Special design considerations must be observed for operation under 1 A. Please contact Luminus for further information.*

Note 12: *Caution must be taken not to stare at the light emitted from these LEDs. Under special circumstances, the high intensity could damage the eye.*

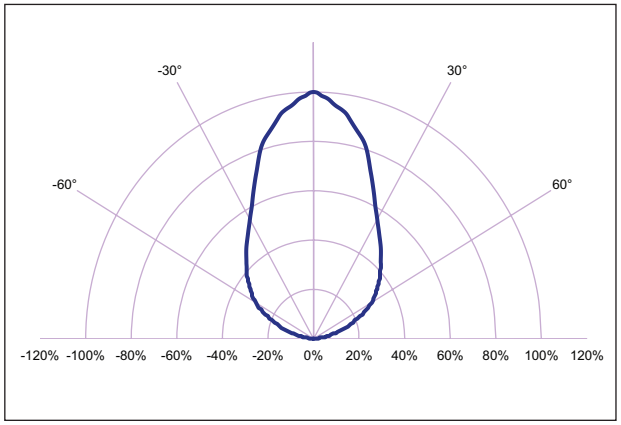
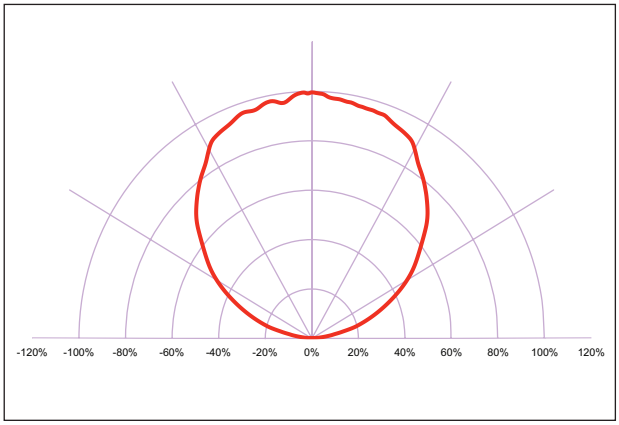
Typical Radiation Pattern

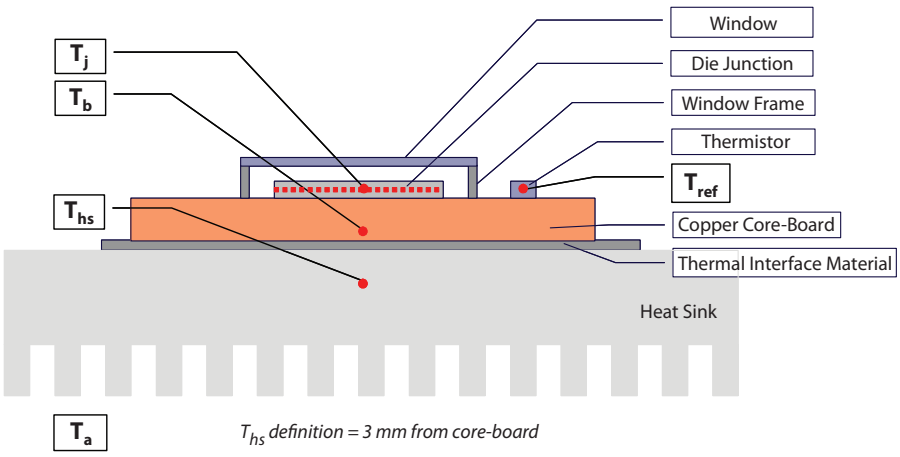
Typical Polar Radiation Pattern for Blue and Green



Typical Polar Radiation Pattern for Red



Thermal Resistance



Typical Thermal Resistance

$R_{\theta j\text{-}b}$ [1]	0.61 °C/W
$R_{\theta b\text{-}hs}$ [1]	0.12 °C/W
$R_{\theta j\text{-}hs}$ [2]	0.73 °C/W
$R_{\theta j\text{-}ref}$ [1]	0.64 °C/W

Note 1: Thermal resistance values are based on FEA model results correlated to measured $R_{\theta j\text{-}hs}$ data.

Note 2: Thermal Resistance is based on eGraf 1205 Thermal interface.

Thermistor Information

The thermistor used in CBT-120 devices mounted on coreboards is from Murata Manufacturing Co. The global part number is NCP15XH103J03RC. Please see http://www.murata.com/ for details on calculating thermistor temperature.

For more information on use of the thermistor, please contact Luminus directly.
