Power MOSFET

PRODUCT SUMMARY					
V _{DS} (V)	50				
$R_{DS(on)}(\Omega)$	V _{GS} = 10 V 0.20				
Q _g (Max.) (nC)	10				
Q _{gs} (nC)	2.6				
Q _{gd} (nC)	4.8				
Configuration	Single				

FEATURES

- Low Drive Current
- Surface Mount
- Fast Switching
- · Ease of Paralleling
- Excellent Temperature Stability
- · Material categorization: For definitions of compliance please see www.vishay.com/doc?99912

DESCRIPTION

The power MOSFET technology is the key to Vishay's advanced line of power MOSFET transistors. The efficient geometry and unique processing of this latest "State of the Art" design achieves: very low on-state resistance combined with high transconductance; superior reverse energy and diode recovery dV/dt capability.

The power MOSFET transistors also feature all of the well established advantages of MOSFET'S such as voltage control, very fast switching, ease of paralleling and temperature stability of the electrical parameters.

Surface mount packages enhance circuit performance by reducing stray inductances and capacitance. The DPAK (TO-252) surface mount package brings the advantages of power MOSFET's to high volume applications where PC Board surface mounting is desirable. The surface mount option IRFR9012, SiHFR9012 is provided on 16 mm tape. The straight lead option IRFU9012, SiHFU9012 of the device is called the IPAK (TO-251).

They are well suited for applications where limited heat dissipation is required such as, computers and peripherals, telecommunication equipment, dc-to-dc converters, and a wide range of consumer products.
