

### **ULTRA-LOW VOLTAGE PROCESSOR SUPERVISORY CIRCUITS**

#### **FEATURES**

- Minimum Supply Voltage of 0.75 V
- Supply Voltage Supervision Range:
  - 1.2 V, 1.5 V, 1.8 V (TPS312x)
  - 3 V (TPS3125 Devices Only)
  - Other Versions on Request
- Power-On Reset Generator With Fixed Delay Time of 180 ms
- Manual Reset Input (TPS3123/5/6/8)
- Watchdog Timer Retriggers the  $\overline{\text{RESET}}$  Output at  $V_{DD} \ge V_{IT}$
- Supply Current of 14 μA (Typ)
- Small SOT23-5 Package
- Temperature Range of -40°C to 85°C
- Reset Output Available in Push-Pull (Active Low and High) and Open-Drain (Active-Low)

#### **APPLICATIONS**

- Applications Using Low Voltage DSPs, Microcontrollers, or Microprocessors
- Portable/Battery-Powered Equipment
- Wireless Communication Systems
- Programmable Controls
- Industrial Equipment
- Notebook/Desktop Computers
- Intelligent Instruments

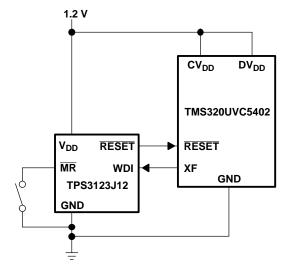

Figure 1. Typical Low-Voltage DSP Application

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

SLVS227B-AUGUST 1999-REVISED FEBRUARY 2004

#### DESCRIPTION

The TPS312x family of ultralow voltage processor supervisory circuits provides circuit initialization and timing supervision, primarily for DSP and processor-based systems.

During power-on,  $\overline{RESET}$  is asserted when the supply voltage (V<sub>DD</sub>) becomes higher than 0.75 V. Thereafter, the supply voltage supervisor monitors V<sub>DD</sub> and keeps  $\overline{RESET}$  output active as long as V<sub>DD</sub> remains below the threshold voltage (V<sub>IT</sub>). An internal timer delays the return of the output to the inactive state (high) to ensure proper system reset. The delay time, t<sub>d</sub> = 180 ms, starts after V<sub>DD</sub> has risen above the threshold voltage (V<sub>IT</sub>).

When the supply voltage drops below the threshold voltage  $(V_{IT})$ , the output becomes active (low) again. No external components are required. All the devices of this family have a fixed-sense threshold voltage  $(V_{IT})$  set by a high precision internal voltage divider.

The TPS3123/5/6/8 devices incorporate a manual reset input,  $\overline{\text{MR}}$ . A low level at  $\overline{\text{MR}}$  causes  $\overline{\text{RESET}}$  to become active. The TPS3124 devices do not have the input  $\overline{\text{MR}}$ , but include a high-level output RESET same as the TPS3125 and TPS3126 devices. In addition, the TPS3123/4/8 have a watchdog timer that needs to be triggered periodically by a positive or negative transition at WDI. When the supervising system fails to retrigger the watchdog circuit within the time-out interval  $t_{\text{tout}}$ = 0.8 s,  $\overline{\text{RESET}}$  output becomes active for the time period ( $t_{\text{d}}$ ). This event also reinitializes the watchdog timer.

The circuits are available in a 5-pin SOT23-5 package. The TPS312x devices are characterized for operation over a temperature range of -40°C to 85°C.

#### PACKAGE INFORMATION STANDARD VERSIONS(1)

T <sub>A</sub>	DEVIC	E NAME	THRESHOLD VOLTAGE	MARKING

#### **ABSOLUTE MAXIMUM RATINGS**

over operating free-air temperature range (unless otherwise noted)(1)

	UNIT
Manual reset, MR	-0.3 V to V <sub>DD</sub> + 0.6 V
Supply voltage, V <sub>DD</sub>	3.6 V
Watchdog input, WDI	-0.3 V to V <sub>DD</sub> + 6 V
Maximum low output current, I <sub>OL</sub>	5 mA
Maximum high output current, I <sub>OH</sub>	-5 mA
Input clamp current, $I_{IK}$ ( $V_I$ < 0 or $V_I > V_{DD}$ )	±10 mA
Output clamp current, $I_{OK}$ ( $V_O < 0$ or $V_O > V_{DD}$ )	±10 mA
Continuous total power dissipation	See Dissipation Rating Table
Operating free-air temperature range, T <sub>A</sub>	-40°C to 85°C
Storage temperature range, T <sub>stg</sub>	-65°C to 150°C
Soldering temperature	260°C

<sup>(1)</sup> Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

#### **DISSIPATION RATING TABLE**

PACKAGE	$T_A \le 25^{\circ}C$ POWER RATING	DERATING FACTOR ABOVE T <sub>A</sub> = 25°C	T <sub>A</sub> = 70°C POWER RATING	T <sub>A</sub> = 85°C POWER RATING
DBV	437 mW	3.5 mW/°C	280 mW	227 mW

#### **IMPORTANT NOTICE**

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.
