

FEATURES

- 15 dB Gain
- Very Low Distortion
- Excellent Input/Output Match
- Low DC Power Consumption
- Good RF Stability with High VSWR Load Conditions
- Surface Mount Package Compatible with Automatic Assembly
- Low Cost
- Repeatability of Monolithic Fabrication
- Meets Cenelec Standard

APPLICATIONS

- CATV Distribution Amplifier
- High Linearity CATV Amplifier

S7 Package
16 Pin Wide Body SOIC
with Heat Slug

PRODUCT DESCRIPTION

The ACA1205 is a surface mount monolithic GaAs RF Linear Amplifier that has been developed to replace, in new designs, the standard CATV Hybrid amplifiers currently in use. The MMIC consist of two

parallel amplifiers, each with 15 dB gain. The amplifier is optimized for exceptionally low distortion and noise figure while providing flat gain and excellent input and output return loss.

ELECTRICAL CHARACTERISTICS

Table 2: Absolute Minimum and Maximum Ratings

PARAMETER	MIN	MAX	UNIT
Amplifier Supplies (pins 10, 11, 14, 15)	0	+15	VDC
RF Input Power (pins 3, 6)	-	+70	dBmV
Storage Temperature	-65	+150	°C
Soldering Temperature	-	+260	°C
Soldering Time	-	5.0	sec

Stresses in excess of the absolute ratings may cause permanent damage. Functional operation is not implied under these conditions. Exposure to absolute ratings for extended periods of time may adversely affect reliability.

Notes:

1. Pins 3 and 6 should be AC-coupled. No external DC bias should be applied.
2. Pin 7 should be pulled to ground through resistor R1, as shown in Figure 3. No external DC bias should be applied.

Table 3: Operating Ranges

PARAMETER	MIN	TYP	MAX	UNIT
RF Frequency	40	-	870	MHz
Supply: V_{DD} (pins 10, 11, 14, 15)	-	+12	-	VDC
Operating Temperature	-40	-	+110	°C

The device may be operated safely over these conditions; however, parametric performance is guaranteed only over the conditions defined in the electrical specifications.

APPLICATION INFORMATION

The ACA1205 is designed as an input stage. This part can be used alone for low gain, low output level applications or can be cascaded with one of the ACA0861 output stages for higher gain and output

signal drive level. The ACA1205 is a low power dissipation part designed as a driver for the ACA0861B output stage.

Notes:

1. T1, T2 (balun) wind 4 turns thru core as shown. (Figure 14).
2. "N" connector, center pin, should be approximately 80 mils in length.
3. Due to the high power dissipation of this device the PC board should be mounted/ attached to a large heat sink.
