Flat Silver Satin Modular Cable - DEC Plug to DEC Plug, Crossed Wiring

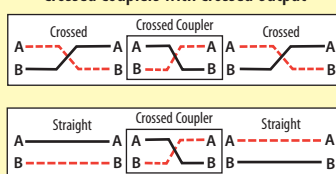

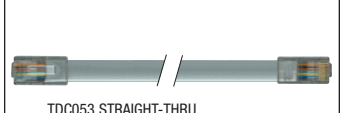

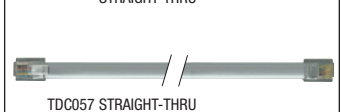

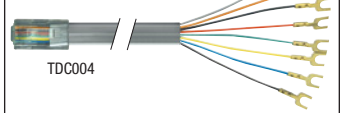

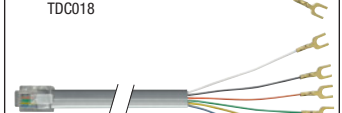

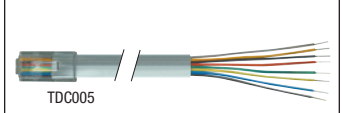

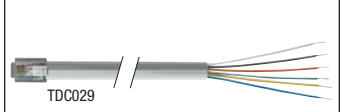

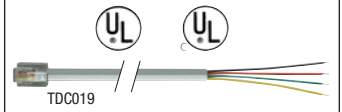

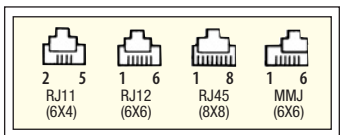

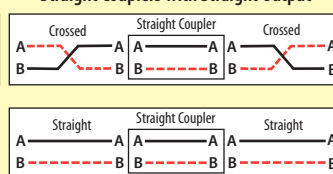

Special silver satin flat modular cords for DEC applications. Assemblies utilize 6 position modified modular plugs with offset connectors. Cross wired.

TDC067-7D	Flat Modular Cable, RJ12 (6x6MMJ) / RJ12 (6x6MMJ), 7.0 ft	3.55	3.27	2.98	2.70	2.41
TDC067-14D	Flat Modular Cable, RJ12 (6x6MMJ) / RJ12 (6x6MMJ), 14.0 ft	4.80	4.42	4.03	3.65	3.26

TIP: What is the difference between straight-thru and cross pinning on a modular cable or coupler?

Straight-thru means each contact is straight pinned to its respective contact (1-1, 2-2, 3-3, etc.). Crossed pinning means contacts are pinned through to the opposite contact. Example: On an 8 position RJ45: 1-8, 2-7, 3-6, etc.

When using a coupler between two patch cords it is important to choose the correct type. As the diagrams illustrate, if the desired pinning from end to end is crossed then the coupler and cables must be crossed. For straight pinning, all cables and couplers must be straight-thru type.
