DESCRIPTION

The NE72218 is a low cost GaAs MESFET suitable for both amplifier and oscillator applications through X-band. The device features a 0.8 micron recessed gate, triple epitaxial technology and is fabricated using ion implantation for improved RF and DC performance, reliability and uniformity. The NE72218 is housed in a 4 pin super mini mold package, making it ideal for high density design.

NEC's stringent quality assurance and test procedures ensure the highest reliability performance.
