

RS-232 LINE DRIVER/RECEIVER

The μ PD4712C and 4712D are high-voltage silicon gate CMOS line driver/reciever conforming to the EIA/TIA-232-E standard. It can operate with a single +5 V power source because it is provided with a DC-DC converter. In addition, this line driver/receiver has many ancillary functions, including output control, threshold select, and standby functions. Because the μ PD4712C and 4712D are provided with four output driver circuits and four receiver circuits, it can constitute an RS-232 interface circuit with a single chip.

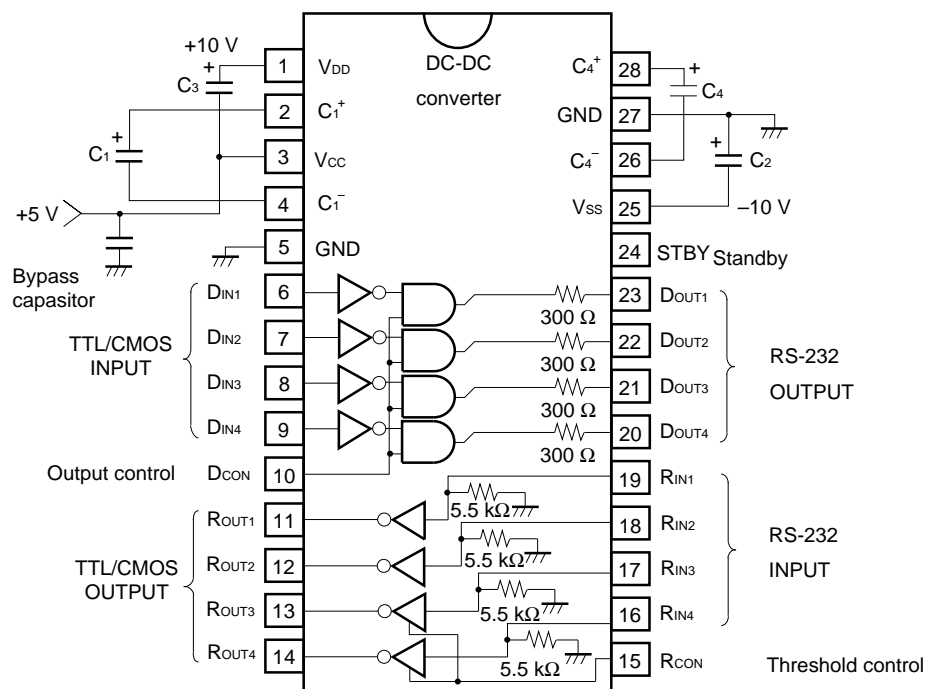

FEATURES

- Conforms to EIA/TIA-232-E (RS-232C) standard
- +5 V single power source
- Threshold select pin selecting two types of threshold voltages
- Standby mode can be set by making standby pin high to reduce circuit current.
- Three-state output configuration. Both driver and receiver outputs go into high-impedance state in standby mode.

ORDERING INFORMATION

Part Number	Package
μ PD4712CCY	28-pin plastic DIP (400 mil)
μ PD4712DCY	28-pin plastic DIP (400 mil)
μ PD4712CGT	28-pin plastic SOP (375 mil)
μ PD4712DGT	28-pin plastic SOP (375 mil)

BLOCK DIAGRAM/PIN CONFIGURATION (Top View)

- * V_{DD} and V_{SS} are output pins of voltages internally boosted. Connecting a load directly to these pins is not recommended.
- ** The standby pin is internally pulled down.
- *** Use capacitors with a working voltage of 16 V or higher as C_1 through C_4 . Insert a bypass capacitor about 0.1 to 1 μF between V_{CC} pin to GND pin.

Storage temperature range	T_{stg}	-55 to +150	$^\circ\text{C}$
Power dissipation	P_T	0.5	W

Note 1. Pulse width: 1 ms, duty factor: 10 % MAX.

RECOMMENDED OPERATING RANGE

Parameter	Symbol	MIN.	TYP.	MAX.	Unit
Supply voltage	V_{CC}	4.5	5.0	5.5	V
Receiver input voltage	R_{IN}	-30		+30	V
Operating temperature range	T_A	-20		80	$^\circ\text{C}$
External capacitance	Note 2	4.7		47	μF

Note 2. The capacitance of an electrolytic capacitor decreases at a low temperature (0°C or lower). Determine the capacitance of the capacitor to be used taking this into consideration when the μ PD4712C and 4712D are used at a low temperature. Keep the wiring length between the capacitor and IC as short as possible.

ELECTRICAL CHARACTERISTICS (OVERALL)

(Unless otherwise specified, $V_{CC} = +5\text{ V} \pm 10\%$, $T_A = -20^\circ\text{C}$ to $+80^\circ\text{C}$, C_1 to $C_4 = 22\ \mu\text{F}$)

RECOMMENDED SOLDERING CONDITIONS

Soldering the μPD4712C and 4712D under the conditions listed in the table below is recommended.

For soldering methods and conditions other than those recommended, consult NEC.

Surface mount type

For the details of the recommended soldering conditions of the surface mount type, refer to Information document “Semiconductor Device Mounting Technology Manual” (C10535EJ7V0IF00)

μPD4712CGT, 4712DGT

No part of this document may be copied or reproduced in any form or by any means without the prior written consent of NEC Corporation. NEC Corporation assumes no responsibility for any errors which may appear in this document.

NEC Corporation does not assume any liability for infringement of patents, copyrights or other intellectual property rights of third parties by or arising from use of a device described herein or any other liability arising from use of such device. No license, either express, implied or otherwise, is granted under any patents, copyrights or other intellectual property rights of NEC Corporation or others.

While NEC Corporation has been making continuous effort to enhance the reliability of its semiconductor devices, the possibility of defects cannot be eliminated entirely. To minimize risks of damage or injury to persons or property arising from a defect in an NEC semiconductor device, customers must incorporate sufficient safety measures in its design, such as redundancy, fire-containment, and anti-failure features.

NEC devices are classified into the following three quality grades:

"Standard", "Special", and "Specific". The Specific quality grade applies only to devices developed based on a customer designated "quality assurance program" for a specific application. The recommended applications of a device depend on its quality grade, as indicated below. Customers must check the quality grade of each device before using it in a particular application.

Standard: Computers, office equipment, communications equipment, test and measurement equipment, audio and visual equipment, home electronic appliances, machine tools, personal electronic equipment and industrial robots

Special: Transportation equipment (automobiles, trains, ships, etc.), traffic control systems, anti-disaster systems, anti-crime systems, safety equipment and medical equipment (not specifically designed for life support)

Specific: Aircrafts, aerospace equipment, submersible repeaters, nuclear reactor control systems, life support systems or medical equipment for life support, etc.

The quality grade of NEC devices is "Standard" unless otherwise specified in NEC's Data Sheets or Data Books. If customers intend to use NEC devices for applications other than those specified for Standard quality grade, they should contact an NEC sales representative in advance.

Anti-radioactive design is not implemented in this product.
