Product Information**General notes**

Series 70 offers users an all-bright momentary switch for use in membrane switching systems. Now for the first time the single LED permits exceedingly bright illumination of the complete touch surface in 6 colours in either a round or square configuration.

When employed together with the optionally available white caps the ON condition of these products is clearly visible even under conditions of high ambient lighting due to the change in colour from white to the corresponding LED colour.

Where more importance is attached to the brilliance than the wavelength (color) of the green light the yellow multi LED can be combined with the green cap to boost the light output of the naturally weaker green version. Switchless indicators, non-illuminated types as well as blank elements round of this assortment.

PCB layout and style are in keeping with the most popular switch elements employed in film-seal keypads. Merly the LED leads need to be supplemented in the existing layout. Due to the neat styling and sculptured surface of the caps all products can also be put to use as normal PCB switches having no film seal.

This permits huge savings in the cost of small quantities or pilot series and when keypad seal requirement are not critical. Customized and collated deliveries are possible on request for large-quantity orders.

Specimen orderPCB Pushbutton :

- Switching element illuminative 92-851.342

Essential accessories :

- Lens 15.4 x 15.4 mm, yellow 70-921.4

- Single-LED T1 Bi-Pin, 2.2 VDC, 20 mA, yellow 10-2602.3174D

We reserve the right to modify technical data

All dimensions in mm

Illuminated pushbutton

- 1 Lens
- 2 Switching element

Illumination element

The customer has to decide what series resistor shall be used to the LED

Essential Accessories:

Illumination

Single-LED

The customer has to decide what series resistor shall be used to the LED

	Socket	Light colour	Operating voltage/-current	Typ-Nr.	
Single-LED	T1 Bi-Pin	blue	3.5 VDC, 20 mA	10-2602.3206L	0.001
		green	3.5 VDC, 20 mA	10-2602.3205L	0.001
		orange	2.1 VDC, 20 mA	10-2602.3203L	0.001
		red	2.1 VDC, 20 mA	10-2602.3202L	0.001
		white	3.5 VDC, 20 mA	10-2602.3209L	0.001
		yellow	2.2 VDC, 20 mA	10-2602.3174D	0.001

Bi-colour LED

The customer has to decide what series resistor shall be used to the LED

	Socket	Light colour	Operating voltage/-current	Typ-Nr.	
Bi-colour LED	T1 Bi-Pin	red/green	1.9/3.5 VDC, 20 mA	10-2603.320AL	0.001
		yellow/green	2.0/3.2 VDC, 20 mA	10-2603.320CL	0.001

Multi-LED

The customer has to decide what series resistor shall be used to the LED

	Socket	Light colour	Operating voltage/-current	Typ-Nr.	
Multi-LED	T1 Bi-Pin	yellow	12 VDC, 40 mA	10-5609.3174D	0.001

Switching element illuminated

Switching system

Short-travel switching system with 2 independent contact points and tactile operation. Guarantees reliable switching even of very light loads.

1 normally open contact

Material

Material of contact

Gold (Au)

Switching element

Thermoplastic Polyester (PET, PBT) and Polyacetale (POM)

Mechanical characteristics

Actuating force

with overlay foil 4 N \pm 1,5 N

Max. actuating force >50 N, as per DIN 42115

Actuating travel

0.4 mm

Rebound time

\leq 1 ms

Resistance to heat of soldering

260 °C, 5 s, as per IEC 60068-2-20

Mechanical lifetime

>5 million operations

Electrical characteristics

Contact resistance

Starting value (initial) \leq 100 m Ω , as per IEC 60512-2-2b

Isolation resistance

\geq 1000 M Ω

Contact resistance

\leq 100 m Ω

as per 500 000 cycles of operation at 12 VDC, 5 mA resistive load \leq 200 m Ω

Electrical life

\geq 500 000 operations at 42 VDC, 50 mA, as per IEC 60512-5-9c

When attention is paid to the direction of current flow from terminal $\frac{3}{4}$ to $\frac{1}{2}$ the electrical life can be prolonged.

Switch rating

max. 2 VA (resistive load)

Switch rating

Switching voltage VDC/VAC	min. 50 mV, max. 42 V
Switching current VDC/VAC	min. 10 μ A, max. 100 mA
Power rating	max. 2 W

Electric strength

500 VAC, 50 Hz, 1 min, as per IEC 60512-2-4a

Electrical characteristics LED

Constant current

15 ... 20 mA

Pre-voltage

Multi-LED typ. 12.5 V

Single-LED typ. 2.2 V

Environmental conditions

Storage temperature

-40 °C ... +85 °C

Operating temperature

-25 °C ... +70 °C

Front protection

front with overlay foil IP 65

Approvals

Declaration of conformity

RoHS

Switching element non-illuminated

Typ-Nr. 70-100.0 and 70-101.0

Switching system

Short-travel switching system with 2 independent contact points and tactile operation. Guarantees reliable switching even of very light loads.

1 normally open contact

Material

Material of contact

Silver (Ag)

Mechanical characteristics

Actuating force

with overlay foil 5 N \pm 2 N

Max. actuating force >50 N, as per DIN 42115

Actuating travel

0.3 mm

Rebound time

\leq 5ms

Mechanical lifetime

>1 million operations

Electrical characteristics

Isolation resistance

\geq 50 M Ω

Contact resistance

\leq 100 m Ω

as per 500 000 cycles of operation at 12 VDC, 5 mA resistive load \leq 200 m Ω

Electrical life

at 5 VDC, 1 mA >1 million operations

at 24 VDC, 1 mA >100 000 operations

Switch rating

\leq 1 VA (resistive load)

Switch rating

\leq 24 VDC, \leq 50 mA

Electric strength
250 VAC for 1min.

Environmental conditions

Storage temperature
-30 °C ... +85 °C

Operating temperature
-20 °C ... +70 °C

Front protection
front with overlay foil IP 65

Switching element non-illuminated
Typ-Nr. 70-201.0

Switching system

Short-travel switching system with 2 independent contact points and tactile operation. Guarantees reliable switching even of very light loads.
1 normally open contact

Material

Material of contact
Gold (Au)

Switching element
Thermoplastic Polyester (PET, PBT) and Polyacetale (POM)

Mechanical characteristics

Actuating force
with overlay foil 2.1 N \pm 0.2 N
Max. actuating force >50 N, as per DIN 42115

Actuating travel
max. 0.5 mm

Rebound time
 \leq 1 ms

Resistance to heat of soldering
260 °C, 5 s, as per IEC 60068-2-20

Mechanical lifetime
>5 million operations

Front protection
front with overlay foil IP 65

Electrical characteristics

Contact resistance
Starting value (initial) \leq 100 m Ω , as per IEC 60512-2-2b

Isolation resistance
 \geq 1000 M Ω

Contact resistance
 \leq 100 m Ω
as per 500 000 cycles of operation at 12 VDC, 5 mA resistive load
 \leq 200 m Ω

Electrical life
 \geq 500 000 operations at 42 VDC, 50 mA, as per IEC 60512-5-9c
When attention is paid to the direction of current flow from terminal $\frac{3}{4}$ to $\frac{1}{2}$ the electrical life can be prolonged.

Switch rating
max. 42 V, 50 mA
min. 50 mV, 10 μ

Switch rating
Switching voltage VDC/VAC min. 50 mV, max. 42 V
Switching current VDC/VAC min.10 mA, max.100 mA
Switch rating max. 2 W

Electric strength
500 VAC, 50 Hz, 1 min, as per IEC 60512-2-4a

Environmental conditions

Storage temperature
-40 °C ... +85 °C

Operating temperature
-25 °C ... +70 °C

Front protection
front with overlay foil IP 65

Suppressor circuits

When switching inductive loads such as relays, DC motors, and DC solenoids, it is always important to absorb surges (e.g. with a diode) to protect the contacts. When these inductive loads are switched off, a counter emf can severely damage switch contacts and greatly shorten lifetime.

Fig. 1 shows an inductive load with a free-wheeling diode connected in parallel. This free-wheeling diode provides a path for the inductor current to flow when the current is interrupted by the switch. Without this free-wheeling diode, the voltage across the coil will be limited only by dielectric breakdown voltages of the circuit or parasitic elements of the coil. This voltage can be kilovolts in amplitude even when nominal circuit voltages are low (e.g. 12 VDC) see Fig. 2.

The free-wheeling diode should be chosen so that the reverse breakdown voltage is greater than the voltage driving the inductive load. The DC blocking voltage (VR) of the free-wheeling diode can be found in the datasheet of a diode. The forward current should be equal or greater than the maximum current flowing through the load.

To get an efficient protection, the free-wheeling diode must be connected as close as possible to the inductive load!

Switching with inductive load
