Key Features

- Frequency Range: 4 – 14.2 GHz
- 2.3 dB Nominal Noise Figure
- 25 dB Nominal Gain
- 15 dB AGC Range
- 13 dBm Nominal P1dB
- 24dBm Nominal OIP3
- Bias: 5 V, 160 mA Gate Bias
5 V, 90 mA Self Bias
- Package Dimensions:
4.0 x 4.0 x 0.9 mm

Primary Applications

- X-Band Radar
- EW, ECM
- Point-to-Point Radio

Product Description

The TriQuint TGA2512-SM is a packaged X-band balanced LNA with AGC amplifier for EW, ECM, and RADAR receiver or driver amplifier applications. The TGA2512-SM provides excellent noise performance with typical midband NF of 2.3dB, and high gain, 25dB from 4-14.2GHz

The TGA2512-SM is designed for maximum ease of use. TGA2512-SM can handle up to 21dBm input power reliably, while the build-in gain control provides 15dB of typical gain control range. The part can be used in self-biased mode, with a single +5V supply connection, or in gate biased mode, allowing the user to control the current for a particular application.

In self-biased mode the TGA2512-SM achieves 6dBm typical P1dB, while in gate-biased mode the typical P1dB is over 13dBm.

Lead-Free & RoHS compliant.

Evaluation boards are available.

T _{CH}	Operating Channel Temperature	200 °C	<u>5/</u>
	Mounting Temperature (30 Seconds)	260 °C	
T _{STG}	Storage Temperature	-65 to 150 °C	

1/ These ratings represent the maximum operable values for this device.

2/ Combinations of supply voltage, supply current, input power, and output power shall not exceed P_D.

3/ Unit for I_d is mA

4/ When operated at this bias condition with a base plate temperature of 85 °C, the median life is 9.3E4 hours.

5/ Junction operating temperature will directly affect the device median time to failure (T_m).

For maximum life, it is recommended that junction temperatures be maintained at the lowest possible levels.
