

LAMP

1259-7SURSYGW/S530-A3

Features

- Two chips are matched for uniform light output, wide viewing angle
- Long life-solid state reliability
- I.C. compatible/Low power consumption
- Pb free
- The product itself will remain within RoHS compliant version

Description

- The 1259-7 LED lamp contain two integral chips and is available as both bicolor and bipolar types.
- The Brilliant Red and Brilliant Yellow Green light is emitted by diodes of AlGaInP and AlGaInP
- Type of bipolar lamps are both White Clear and Color Clear while the bicolor are White Diffused

Applications

- TV set
- Monitor
- Telephone
- Computer

Device Selection Guide

Chip Materials	Emitted Color	Resin Color
AlGaInP	Brilliant Red	White Diffused
AlGaInP	Brilliant Yellow Green	

Absolute Maximum Ratings (Ta=25℃)

Parameter	Symbol	Rating		Unit
Continuous Forward Current	I _F	SUR/S530	25	mA
		SYG/S530	25	
Reverse Voltage	V _R	5		V
Power Dissipation	Pd	SUR/S530	60	mW
		SYG/S530	60	
Operating Temperature	T _{opr}	-40 ~ +85		℃
Storage Temperature	T _{stg}	-40 ~ +100		℃
ESD	ESD _{HBM}	SUR/S530	2000	V
		SYG/S530	2000	
Soldering Temperature	T _{sol}	Reflow Soldering : 260 ℃ for 5 sec.		

Electro-Optical Characteristics (Ta=25°C)

Parameter	Symbol		Min.	Typ.	Max.	Unit	Condition
Forward Voltage	V_F	SUR/S530	----	2.0	2.4	V	$I_F=20mA$
		SYG/S530	----	2.0	2.4		
Reverse Current	I_R	SUR/S530	----	-----	10	μA	$V_R=5V$
		SYG/S530	----	-----	10		
Luminous Intensity	I_v	SUR/S530	40	80	----	mcd	$I_F=20mA$
		SYG/S530	16	32	----		
Viewing Angle	$2\theta_{1/2}$		----	60	----	deg	$I_F=20mA$
Peak Wavelength	λ_p	SUR/S530	----	632	----	nm	$I_F=20mA$
		SYG/S530	----	575	----		
Dominant Wavelength	λ_d	SUR/S530	----	624	----	nm	$I_F=20mA$
		SYG/S530	----	573	----		
Spectrum Radiation Bandwidth	$\Delta \lambda$	SUR/S530	----	20	----	nm	$I_F=20mA$
		SYG/S530	----	20	----		

Note:

*Measurement Uncertainty of Forward Voltage: $\pm 0.1V$

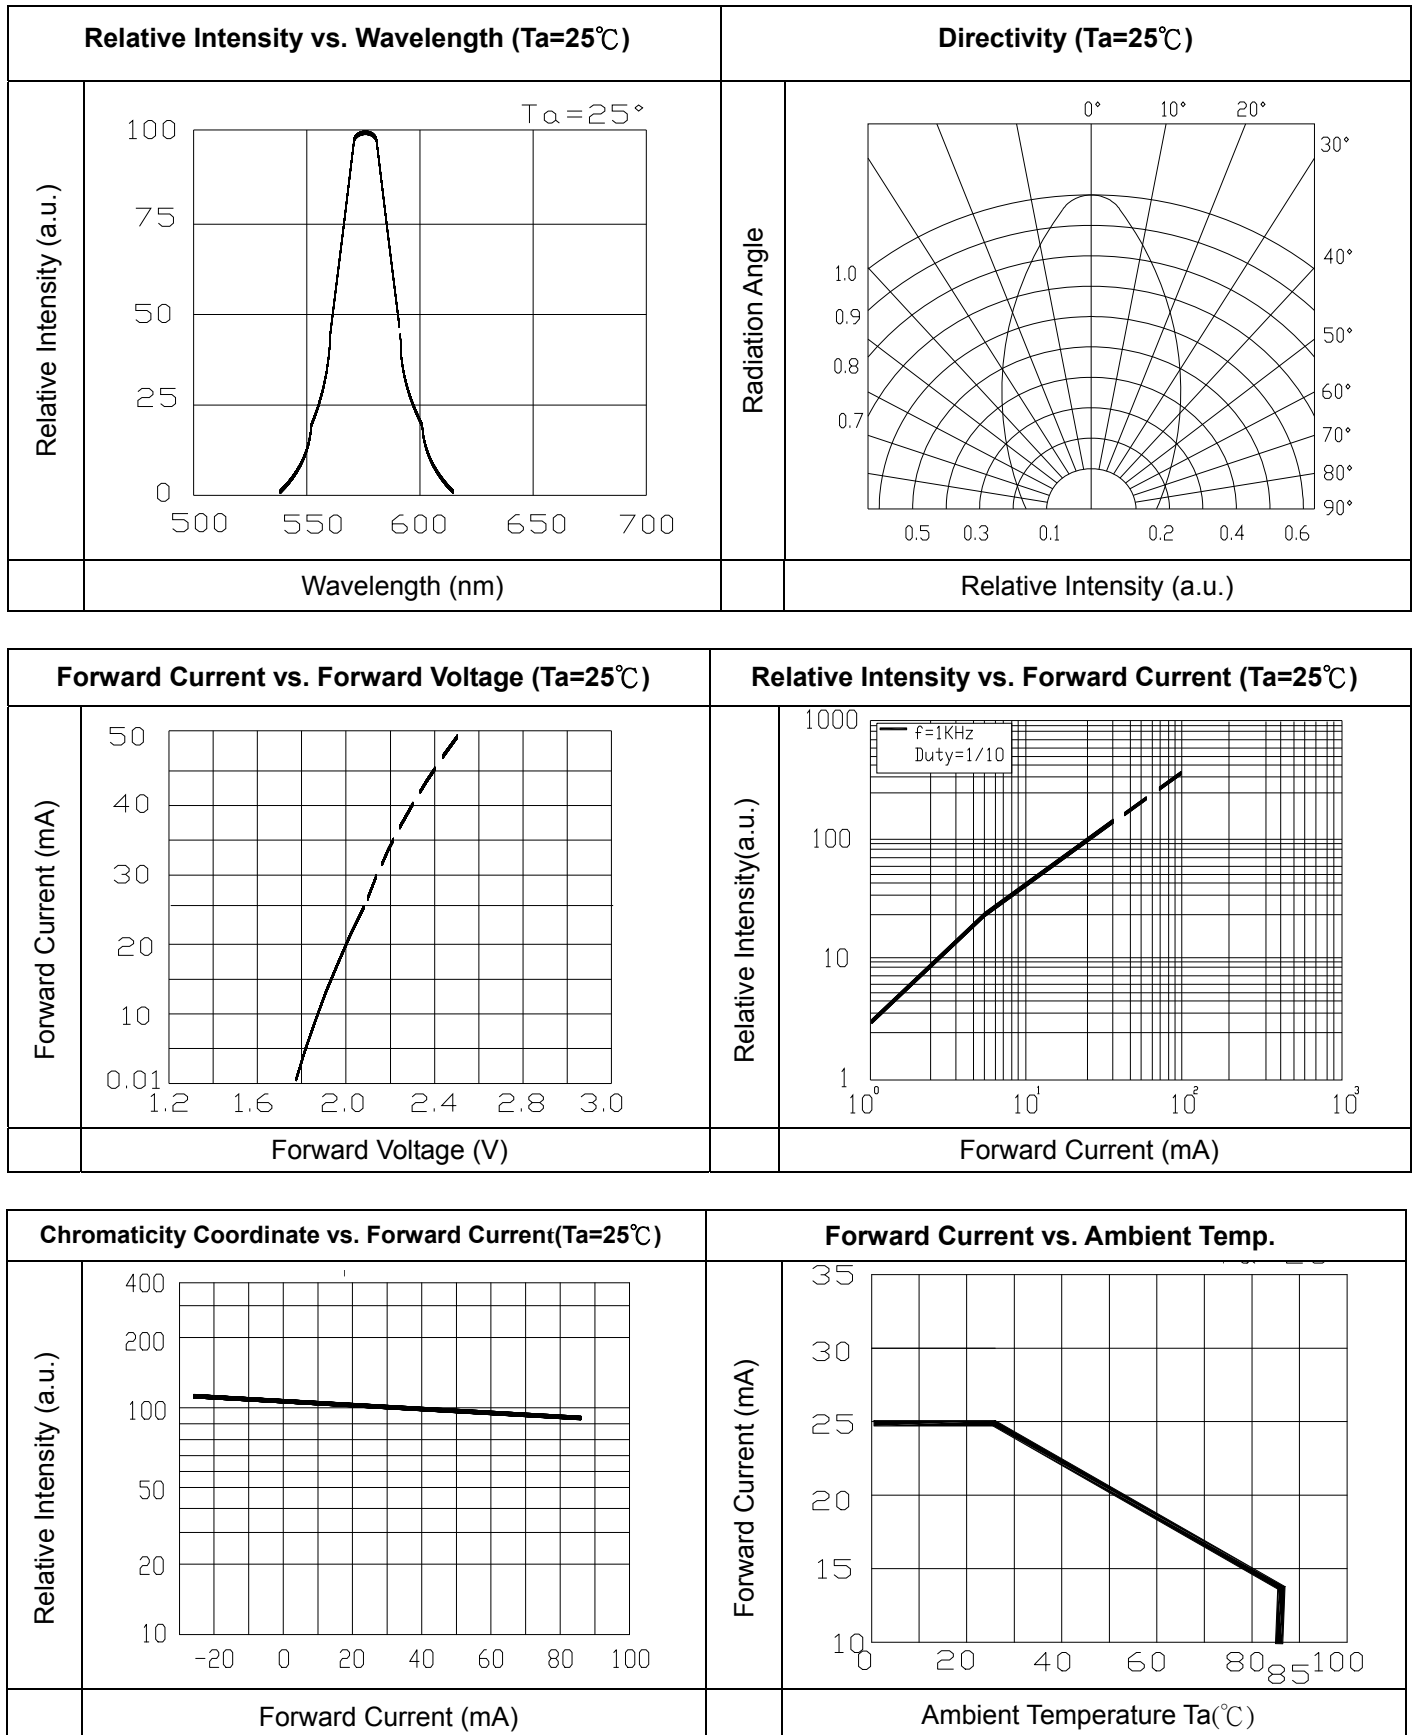

*Measurement Uncertainty of Luminous Intensity: $\pm 10\%$

*Measurement Uncertainty of Dominant Wavelength $\pm 1.0nm$

Typical Electro-Optical Characteristics Curves SUR

SYG

Package Dimension

Note: Note:

1. All dimensions are in Millimeter.
2. An epoxy meniscus may extend about 1.5mm(0.059") down to the lead.
3. Tolerances unless Dimension ± 0.25 mm.

Moisture Resistant Packing Materials

Label Explanation

- CPN: Customer's Production Number
- P/N : Production Number
- QTY: Packing Quantity
- CAT: Ranks of Luminous Intensity and Forward Voltage
- HUE: Color Rank
- REF: Reference
- LOT No: Lot Number

Packing Specification

■ Anti-electrostatic bag

■ Inner Carton

■ Outside Carton

■ Packing Quantity

1. MIN 200 To500 PCS/1 Bag,5 Bags/1 Inner Carton
2. 10 Inner Cartons/1 Outside Carton

Notes

1. Lead Forming

- During lead formation, the leads should be bent at a point at least 3mm from the base of the epoxy bulb.
- Lead forming should be done before soldering.
- Avoid stressing the LED package during leads forming. The stress to the base may damage the LED's characteristics or it may break the LEDs.
- Cut the LED lead frames at room temperature. Cutting the lead frames at high temperatures may cause failure of the LEDs.
- When mounting the LEDs onto a PCB, the PCB holes must be aligned exactly with the lead position of the LED. If the LEDs are mounted with stress at the leads, it causes deterioration of the epoxy resin and this will degrade the LEDs.

2. Storage

- The LEDs should be stored at 30°C or less and 70%RH or less after being shipped from Everlight and the storage life limits are 3 months. If the LEDs are stored for 3 months or more, they can be stored for a year in a sealed container with a nitrogen atmosphere and moisture absorbent material.
- Please avoid rapid transitions in ambient temperature, especially, in high humidity environments where condensation can occur.

3. Soldering

- Careful attention should be paid during soldering. When soldering, leave more than 3mm from solder joint to epoxy bulb, and soldering beyond the base of the tie bar is recommended.
- Recommended soldering conditions:

Hand Soldering		DIP Soldering	
Temp. at tip of iron	300°C Max. (30W Max.)	Preheat temp.	100°C Max. (60 sec Max.)
Soldering time	3 sec Max.	Bath temp. & time	260 Max., 5 sec Max
Distance	3mm Min.(From solder joint to epoxy bulb)	Distance	3mm Min. (From solder joint to epoxy bulb)

■ Recommended soldering profile

- Avoiding applying any stress to the lead frame while the LEDs are at high temperature particularly when soldering.
- Dip and hand soldering should not be done more than one time
- After soldering the LEDs, the epoxy bulb should be protected from mechanical shock or vibration until the LEDs return to room temperature.
- A rapid-rate process is not recommended for cooling the LEDs down from the peak temperature.
- Although the recommended soldering conditions are specified in the above table, dip or hand soldering at the lowest possible temperature is desirable for the LEDs.
- Wave soldering parameter must be set and maintain according to recommended temperature and dwell time in the solder wave.

4. Cleaning

- When necessary, cleaning should occur only with isopropyl alcohol at room temperature for a duration of no more than one minute. Dry at room temperature before use.
- Do not clean the LEDs by the ultrasonic. When it is absolutely necessary, the influence of ultrasonic cleaning on the LEDs depends on factors such as ultrasonic power and the assembled condition. Ultrasonic cleaning shall be pre-qualified to ensure this will not cause damage to the LED

5. Heat Management

- Heat management of LEDs must be taken into consideration during the design stage of LED application. The current should be de-rated appropriately by referring to the de-rating curve found in each product specification.

- The temperature surrounding the LED in the application should be controlled. Please refer to the data sheet de-rating curve.
6. ESD (Electrostatic Discharge)
- Electrostatic discharge (ESD) or surge current (EOS) can damage LEDs.
 - An ESD wrist strap, ESD shoe strap or antistatic gloves must be worn whenever handling LEDs.
 - All devices, equipment and machinery must be properly grounded.
-
- Use ion blower to neutralize the static charge which might have built up on surface of the LEDs plastic lens as a result of friction between LEDs during storage and handing.
7. Other
- Above specification may be changed without notice. EVERLIGHT will reserve authority on material change for above specification.
 - When using this product, please observe the absolute maximum ratings and the instructions for using outlined in these specification sheets. EVERLIGHT assumes no responsibility for any damage resulting from use of the product which does not comply with the absolute maximum ratings and the instructions included in these specification sheets.
 - These specification sheets include materials protected under copyright of EVERLIGHT corporation. Please don't reproduce or cause anyone to reproduce them without EVERLIGHT's consent.

DISCLAIMER

1. EVERLIGHT reserves the right(s) on the adjustment of product material mix for the specification.
2. The product meets EVERLIGHT published specification for a period of twelve (12) months from date of shipment.
3. The graphs shown in this datasheet are representing typical data only and do not show guaranteed values.
4. When using this product, please observe the absolute maximum ratings and the instructions for using outlined in these specification sheets. EVERLIGHT assumes no responsibility for any damage resulting from the use of the product which does not comply with the absolute maximum ratings and the instructions included in these specification sheets.
5. These specification sheets include materials protected under copyright of EVERLIGHT. Reproduction in any form is prohibited without obtaining EVERLIGHT's prior consent.
6. This product is not intended to be used for military, aircraft, automotive, medical, life sustaining or life saving applications or any other application which can result in human injury or death. Please contact authorized Everlight sales agent for special application request.
