

MN4073B / MN4073BS

Triple 3-Input AND Gates

Description

The MN4073B/S are positive 3-input AND gates and have 3 circuits in a package.

The outputs are fully buffered to improve the propagation characteristics between the input and output which are affected by increasing load capacitance and minimizes propagation delay time. Their primary use is where low power dissipation and/or high noise immunity is desired.

The MN4073B/S are equivalent to MOTOROLA MN14073B and RCA CD4073B.
