Description

- Header
- Plug-In Direction and Wire Entrance Perpendicular to PCB when plugged with 110-A-111, 110-A-IDC, 110-FP3-211
- 110-M-221 is equipped with a poka-yoke feature on each end sidewall. This prevents incorrect misaligned plugging when utilized with 110-A series plugs.
- 110-M-121 have a small foot print that allows a "in" fit when replacing competitive product. This is especially useful on PCB that are typically completely covered in components. It can be said that misalignment would in principle be prevented by the close components in close proximity.
- Internal features prevent backwards insertion.
- Installable on PCB assembled as per the wave solder technology specification

Illustration

Coding keys 120-K are available to prevent the insertion of the wrong plug into a header. These are usually field inserted but can be factory installed if required. These coding keys are visible from the exterior, through slots in the header. Correct keying requires the removal of corresponding keying nibs from the 110-A plugs.
