

USB Level Shifter Stick Basic

Data Sheet

- The USB Level Shifter converts an existing USB interface to a TTL-UART interface with variable operating voltage, as it is often used for trace and debug functions.
- The UART interface level automatically adapts to the operating voltage of the target.
- Level conversion takes place for the UART signals TxD and RxD.
- The RxD and TxD signal cross over takes place in the USB Level Shifter.
- A 6-pin 1:1 connection cable for the target connection is included.
