

RAD-TOLERANT CLASS-V REGULATING PULSE WIDTH MODULATOR

FEATURES

- QML-V Qualified, SMD 5962-89511
- Rad-Tolerant: 30 kRad (Si) TID ⁽¹⁾
- 8-V to 35-V Operation
- 5.1-V Buried Zener Reference Trimmed to $\pm 0.75\%$
- 100-Hz to 400-kHz Oscillator Range
- Separate Oscillator Sync Terminal
- Adjustable Deadtime Control
- Internal Soft Start
- Pulse-by-Pulse Shutdown
- Input Undervoltage Lockout With Hysteresis
- Latching PWM to Prevent Multiple Pulses
- Dual Source/Sink Output Drivers
- Low Cross Conduction Output Stage
- Tighter Reference Specifications

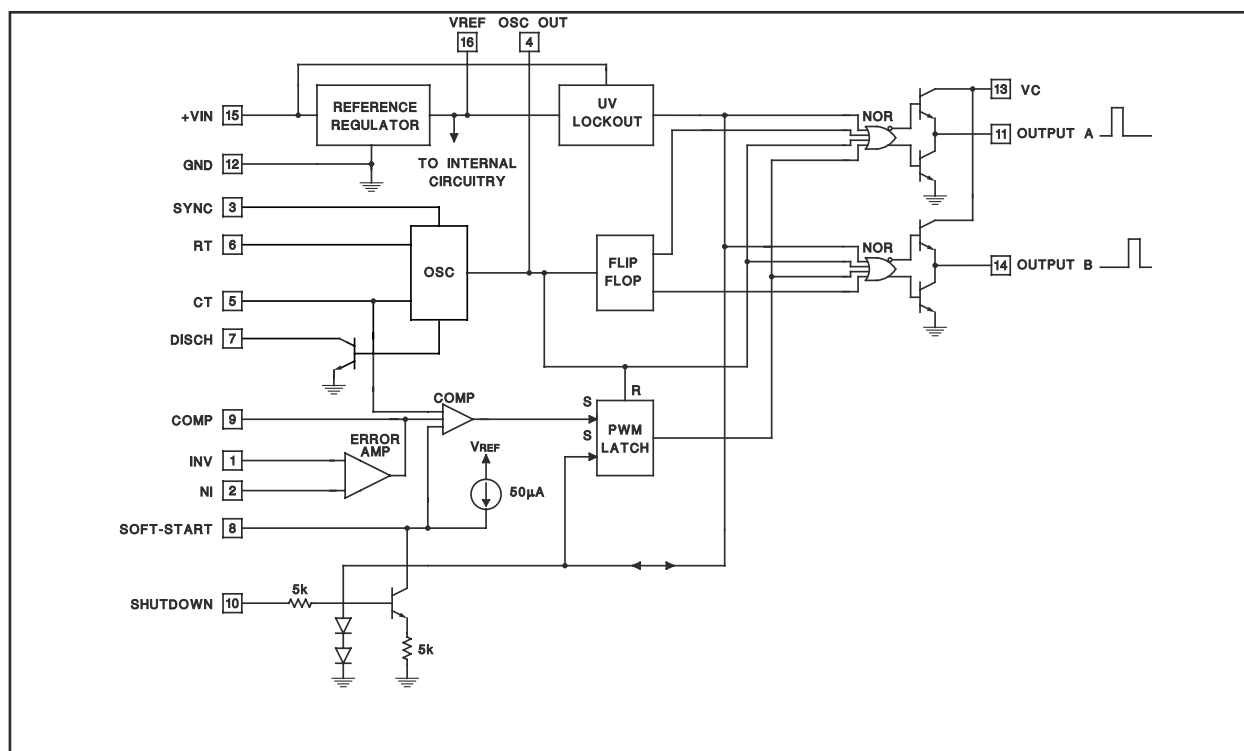

(1) Radiation tolerance is a typical value based upon initial device qualification with dose rate = 10 mrad/sec. Radiation Lot Acceptance Testing is available - contact factory for details.

DESCRIPTION

The UC1525B pulse width modulator integrated circuit is designed to offer improved performance and lowered external parts count when used in designing all types of switching power supplies. The on-chip 5.1-V buried zener reference is trimmed to $\pm 0.75\%$, and the input common-mode range of the error amplifier includes the reference voltage, eliminating external resistors. A sync input to the oscillator allows multiple units to be slaved or a single unit to be synchronized to an external system clock. A single resistor between the CT and the discharge terminals provide a wide range of dead-time adjustment. These devices also feature built-in soft-start circuitry with only an external timing capacitor required. A shutdown terminal controls both the soft-start circuitry and the output stages, providing instantaneous turn off through the PWM latch with pulsed shutdown, as well as soft-start recycle with longer shutdown commands. These functions are also controlled by an undervoltage lockout which keeps the outputs off and the soft-start capacitor discharged for sub-normal input voltages. This lockout circuitry includes approximately 500 mV of hysteresis for jitter-free operation. Another feature of these PWM circuits is a latch following the comparator. Once a PWM pulse has been terminated for any reason, the outputs remain off for the duration of the period. The latch is reset with each clock pulse. The output stages are totem-pole designs capable of sourcing or sinking in excess of 200 mA. The UC1525B output stage features NOR logic, giving a LOW output for an OFF state.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

BLOCK DIAGRAM

This device has limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

ORDERING INFORMATION⁽¹⁾

T_A	PACKAGE⁽²⁾	ORDERABLE PART NUMBER	TOP-SIDE MARKING
–55°C to 125°C	FK	5962-8951106V2A	UC1525BFK-SP

- (1) For the most current package and ordering information, see the Package Option Addendum at the end of this document, or see the TI web site at www.ti.com.
- (2) Package drawings, thermal data, and symbolization are available at www.ti.com/packaging.

ABSOLUTE MAXIMUM RATINGS⁽¹⁾⁽²⁾

over operating free-air temperature range (unless otherwise noted)

$+V_{IN}$	Supply voltage		40 V
V_C	Collector supply voltage		40 V
	Logic inputs		–0.3 V to 5.5 V
V_I	Analog inputs		–0.3 V to V_{IN}
I_O	Output current, source or sink		500 mA
	Reference output current		50 mA
	Oscillator charging current		5 mA
P_D	Power dissipation	$T_A = 25^\circ\text{C}$	1000 mW
		$T_C = 25^\circ\text{C}$	2000 mW
T_J	Operating junction temperature		–55°C to 150°C
T_{stg}	Storage temperature range		–65°C to 150°C
T_{lead}	Lead temperature (soldering, 10 seconds)		300°C

- (1) Stresses beyond those listed under *absolute maximum ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *recommended operating conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltages are with respect to ground. Currents are positive into, negative out of the specified terminal.

RECOMMENDED OPERATING CONDITIONS⁽¹⁾

over operating free-air temperature range (unless otherwise noted)

		MIN	MAX	UNIT
$+V_{IN}$	Input voltage	8	35	V
V_C	Collector supply voltage	4.5	35	V
	Sink/source load current (steady state)	0	100	mA
	Sink/source load current (peak)	0	400	mA
	Reference load current	0	20	mA
	Oscillator frequency range	0.1	400	kHz
	Oscillator timing resistor	2	150	k Ω
	Oscillator timing capacitor	0.001	0.1	μF
	Dead time resistor range	0	500	Ω

- (1) Range over which the device is functional and parameter limits are specified.

CONNECTION DIAGRAM

ELECTRICAL CHARACTERISTICS

$V_{IN} = 20\text{ V}$, $T_A = T_J = -55^\circ\text{C}$ to 125°C (unless otherwise noted)

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
Reference Section					
Output voltage	$T_J = 25^\circ\text{C}$	5.062	5.10	5.138	V
Line regulation	$V_{IN} = 8\text{ V to }35\text{ V}$		5	10	mV
Load regulation	$I_L = 0\text{ mA to }20\text{ mA}$		7	15	mV
Temperature stability ⁽¹⁾	Over operating range		10	50	mV
Total output variation	Over line, load, and temperature	5.036		5.164	V
Short-circuit current	$V_{REF} = 0\text{ V}$, $T_J = 25^\circ\text{C}$		80	100	mA
Output noise voltage ⁽¹⁾	$10\text{ Hz} \leq f \leq 10\text{ kHz}$, $T_J = 25^\circ\text{C}$		40	200	μVrms
Oscillator Section					
Initial accuracy ⁽²⁾	$T_J = 25^\circ\text{C}$		± 2	± 6	%
Voltage stability ⁽²⁾	$V_{IN} = 8\text{ V to }35\text{ V}$		± 0.3	± 1	%
Temperature stability ⁽¹⁾⁽²⁾	Over operating range		± 3	± 6	%
Minimum frequency	$R_T = 200\text{ k}\Omega$, $C_T = 0.1\text{ }\mu\text{F}$			120	Hz
Maximum frequency	$R_T = 2\text{ k}\Omega$, $C_T = 470\text{ pF}$	400			kHz
Current mirror	$I_{RT} = 2\text{ mA}$	1.7	2.	2.2	mA
Clock amplitude ⁽²⁾		3	3.5		V
Clock width ⁽²⁾	$T_J = 25^\circ\text{C}$	0.3	0.5	1	μs
Sync threshold		1.2	2	2.8	V
Sync input current	Sync = 3.5 V		1	2.5	mA

(1) Parameters ensured by design and/or characterization, if not production tested.

(2) Tested at $f_{osc} = 40\text{ kHz}$ ($R_T = 3.6\text{ k}\Omega$, $C_T = 0.01\text{ }\mu\text{F}$, $R_D = 0\text{ }\Omega$).
Approximate oscillator frequency is defined by: $f = 1/(C_T (0.7 \times R_T + 3R_D))$.

ELECTRICAL CHARACTERISTICS (continued)

 $V_{IN} = 20\text{ V}$, $T_A = T_J = -55^\circ\text{C}$ to 125°C (unless otherwise noted)

PARAMETER	TEST CONDITIONS	MIN	TYP	MAX	UNIT
Error Amplifier Section ($V_{CM} = 5.1\text{ V}$)					
Input offset voltage			0.5	5	mV
Input bias current			1	10	μA
Input offset current				1	μA
DC open loop gain	$R_L \geq 10\text{ M}\Omega$	60	75		dB
Gain-bandwidth product ⁽³⁾	$A_V = 0\text{ dB}$, $T_J = 25^\circ\text{C}$	1	2		MHz
Output low level			0.2	0.5	V
Output high level		3.8	5.6		V
Common mode rejection	$V_{CM} = 1.5\text{ V}$ to 5.2 V	60	75		dB
Supply voltage rejection	$V_{IN} = 8\text{ V}$ to 35 V	50	60		dB
PWM Comparator					
Minimum duty cycle				0	%
Maximum duty cycle ⁽⁴⁾		45	49		%
Input threshold ⁽⁴⁾	Zero duty cycle	0.7	0.9		V
Input threshold ⁽⁴⁾	Maximum duty cycle		3.3	3.6	V
Input bias current			0.05		μA
Shutdown Section					
Soft start current	$V_{SHUTDOWN} = 0\text{ V}$, $V_{SOFTSTART} = 0\text{ V}$	25	50	80	μA
Soft start low level	$V_{SHUTDOWN} = 2.5\text{ V}$		0.4	0.7	V
Shutdown threshold	To outputs, $V_{SOFTSTART} = 5.1\text{ V}$, $T_J = 25^\circ\text{C}$	0.6	0.8	1	V
Shutdown input current	$V_{SHUTDOWN} = 2.5\text{ V}$		0.4	1	mA
Shutdown delay ⁽³⁾	$V_{SHUTDOWN} = 2.5\text{ V}$, $T_J = 25^\circ\text{C}$		0.2	0.5	μs
Output Drivers (Each Output) ($V_C = 20\text{ V}$)					
Output low level	$I_{SINK} = 20\text{ mA}$		0.2	0.4	V
	$I_{SINK} = 100\text{ mA}$		1	2	
Output high level	$I_{SOURCE} = 20\text{ mA}$	18	19		V
	$I_{SOURCE} = 100\text{ mA}$	17	18		
Undervoltage lockout	V_{COMP} and $V_{SOFTSTART} = \text{High}$	6	7	8	V
Collector leakage	$V_C = 35\text{ V}$			200	μA
Rise time ⁽³⁾	$C_L = 1\text{ nF}$, $T_J = 25^\circ\text{C}$		100	600	ns
Fall time ⁽³⁾	$C_L = 1\text{ nF}$, $T_J = 25^\circ\text{C}$		50	300	ns
Cross conduction charge	Per cycle, $T_J = 25^\circ\text{C}$		30		nC
Total Standby Current					
Supply current	$V_{IN} = 35\text{ V}$		14	20	mA

(3) Parameters ensured by design and/or characterization, if not production tested.

(4) Tested at $f_{OSC} = 40\text{ kHz}$ ($R_T = 3.6\text{ k}\Omega$, $C_T = 0.01\text{ }\mu\text{F}$, $R_D = 0\text{ }\Omega$).
Approximate oscillator frequency is defined by: $f = 1/(C_T (0.7 \times R_T + 3R_D))$.

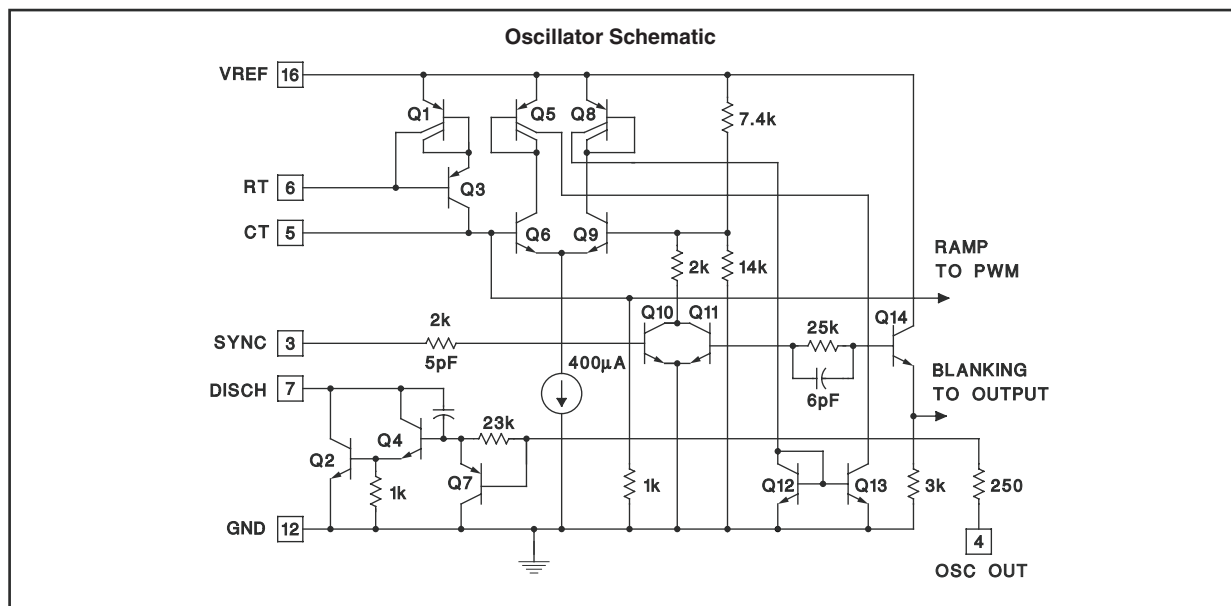

PRINCIPLES OF OPERATION AND TYPICAL CHARACTERISTICS

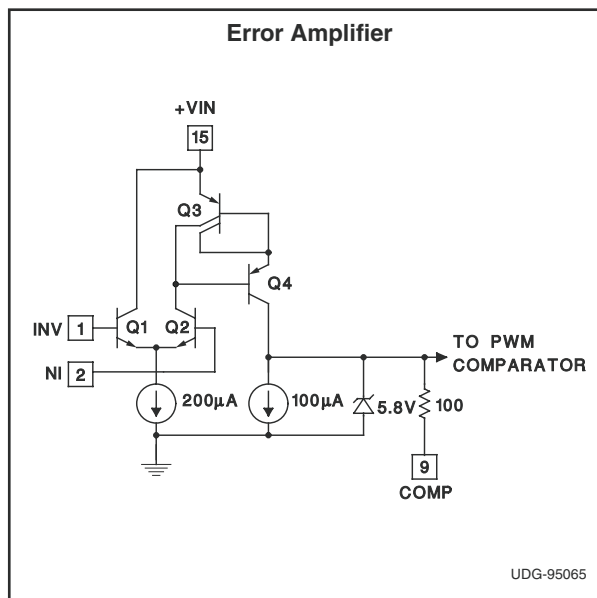

PRINCIPLES OF OPERATION AND TYPICAL CHARACTERISTICS (continued)

Since both the compensation and soft-start terminals (Pins 9 and 8) have current source pullups, either can readily accept a pulldown signal, which only has to sink a maximum of 100 μA to turn off the outputs. This is subject to the added requirement of discharging whatever external capacitance may be attached to these pins.

An alternate approach is the use of the shutdown circuitry of Pin 10, which has been improved to enhance the available shutdown options. Activating this circuit by applying a positive signal on Pin 10 performs two functions: the PWM latch is immediately set providing the fastest turn-off signal to the external soft-start capacitor. If the shutdown command is short, the PWM signal is terminated without significant discharge of the soft-start capacitor, thus, allowing, for example, a convenient implementation of pulse-by-pulse current limiting. Holding Pin 10 high for a longer duration, however, ultimately discharges this external capacitor, recycling slow turn-on upon release.

5962-8951106V2A	ACTIVE	LCCC	FK	20	1	TBD	POST-PLATE	N / A for Pkg Type

⁽¹⁾ The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBsolete: TI has discontinued the production of the device.

⁽²⁾ Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

⁽³⁾ MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
