TC2030-MCP

Tag Connect TC2030-MCP is primarily intended for use in development environments and is also ideal for production programming. The spring-loaded contact pins are held firmly in place by four plastic legs each of which clips securely into its own locating hole.

Tag-Connect TC2030-MCP is ideal where you need to maintain a connection to the PCB for an extended period such as when performing testing or development work.

See also TC2030-MCP-NL for applications where an even smaller footprint is required.

Ideal for both debugging and production programming.

Recognized Microchip Third-Party Tool Provider
